>entire world without ever being consulted,

You sound like there's something to "hide" about freebanding, Twist. Why wouldn't you want to proudly and publicly stand up for your "hobby"? What would be wrong with you being a representative of freebanding to the world? You already make your feelings known in a public forum. You are an outspoken proponent of freebanding in an e-zine. Why the sudden reluctance to come out of the closet and be the "champion" of freebanding????

2. Re: TWISTEDHED A LOOSE CANNON!

Yes, the man is totally UNPREDICTABLE. We tried to steer him to 'professor' but one of his flunkies took the bait instead. Meanwhile Twisted got a sudden bug up his ass and decided to go off in a totally different direction with this "Sparks" guy in Texas -- which turns out to be hilariously WRONG as well. There's no telling what he'll do. We've learned to throw out best bait and then just sit back and watch what's fast becoming the greatest show on UseNet.

Radio Shack, in the OWNERS manual for the HTX-242,
gave the key procedure for opening the TX up to MARs.

And the mod to make it the default on reset, and the alternate
mod to allow it to transmit wherever it can receive, is all
over web.

Mike

Bet that makes it a pain in the ass for the person trying to talk back and
they don't know what sideband you are on. :)

"Train" <cbmods@optonline.net> wrote in message
news:xRDG6.8672$171.815679@news02.optonline.net...
DSB when talking about old Tram radios is that they broadcast on both upper
and lower at the same time when in SSB mode. The receive is what you are
actually setting to upper or lower when putting the radio in SSB mode. Titan
II, Titan IIa, 201, 201a, and if I remember right, the Titan IV also where
DSB radios.
Train

Thanks Leland for the reply.

I've done all that you've posted. McAfee didn't find anything. My internet connection is thru a cable modem service. The one thing my ISP had told me is that whenever I secure my computer for the night, to turn the modem off. Funny though... I can't! The unit has no on/off switch. This is ridiculous! I guess I'll have to unplugged the damned thing everytime I turn the computer off. Maybe its time to buy another modem. DAMMMMMIT!!!

Thanks again...

Huh?

Was there something on the net saying something about "PCAnywhere" or something like that? I've got all kinds of email from my nephew saying something about hackers can see everything on your computer with some kind of crazy assed software program. Or some crap like that.

Writing style? Now Sparky. Are you a little far-fetched? I told you once before that I respected your postings and all that. What made you think that? Am I the only one who dots "I's" and crosses "T's?" Come on!!!

"By golly, if he hadn't said anything at all he might have had some people fooled."

I wish you were right on this one...

>there is nothing illegal about this radio unless the owner mods it outs
and
>then transmits out of the ham bands.

You need to re-read your auction notice. It states that the radio is optimized for 24 to 32 MHz. You're busted, pal.

BLAM! He decided Sparky is a ham from Texas!
The man needs to be yanked of the web before he does real damage.

(Sigh) OK, loose screw. Here you are starting to whine and beg for me to leave the ng again. I love when you beg, sparks.
I didn't decide sparkless was a hammie, he said it right here. Now the world can look up the call sign so you can tell us how he's not from TX.

Last time I visited the small town in Kansas my parents lived at I needed a PL-259 connector. They informed me they now had a Radio Shack so I didn't have to drive 30 minutes for a part.
They have a Radio Shack, it is a roped off corner of the True Value Hardware store, reasonably stocked, but the Hardware salesman didn't even pretend to know anything about the products, at least he was honest.
Sparky KI5Gy

Wow! Gee! Sparky!

Yep, this week Tenn. may / will pass a law to prohibit Wal Mart and others from being Communists (that is, selling Gasoline for UNDER what they pay for it). Because of some new Stooper Centers they put in recently with gas pumps, it seems like the little people got together to have the legislature make a law to prevent Wally from putting them out of business. I wish they would of done this because of their CB department years ago. I've had to sell CB's just over cost to take business away from Wally's Walton Mart. Wally's communist deeds have been fully documented by that college professor's book on what they did to towns when they came into Iowa. Everyone gets put out of Biz, while their kids get to be corporate slaves @ Wally's World. I am composing a song called "This is NOT Wally's world,..."! Anyway, your thoughts on this State action on Wally are welcome, even though not CB related this time, but it actually is! I guess you could never get any CB shops together in the past or now to stop Wally, but since the low profit in Gas caused the little people to go against Wally & they won!!!!!
Dave!

27. HONEYMOON EXPERIENCE

Newsgroup: rec.radio.cb
Date: 2001-05-01 02:59:27 UTC
From: icecoldnyc@aol.comICECOLD

A mother had 3 virgin daughters. They were all getting married within a short period of time. Because Mom was worried about how their sex life would get started, she made them promise to send a postcard from the honeymoon with a few words on how the marital sex felt.
The first girl sent a card from Hawaii two days after the wedding. The card said nothing but "Maxwell House". Mom was puzzled at first, but then went to the kitchen and got out the Maxwell House jar. It said "Good till the last drop". Mom blushed but was pleased for her daughter.
The second sent the card from Vermont a week after the wedding. The card read: "Benson and Hedges". Mom now knew to go straight to her husband's cigarettes, and she read from the Benson and Hedges pack: "Extra Long -King Size"
She was again slightly embarassed but still happy for her daughter.
The third girl left for her honeymoon in the Caribbean. Mom waitd for a week, nothing. Another week went by and still nothing. Then after a whole month, a card finally arrived. Written on it with shaky handwriting were the words: "British Airways". Mom took out her latest Harper's Bazaar Magazine, flipped through the pages fearing the worst, and finally found the ad for the airline. The ad said: "Three times a day, seven days a week, both ways." Mom fainted.

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't mean a THING if you ain't got that SWING!!!!!!!

Bill,

And what that proves is that *knowledge* is not illegal. It's not even illegal to *mod* the radio. It is illegal to use it on frequencies for which a person is not authorized.

An Icom 706 out of the box will just BEEP!--if one attempts to transmit outside of the amateur bands. One does, indeed, have to mod the rig to go out of band--it will already receive all over the place. How do I know that? I own 2 of them.

There are, in fact, good reasons to be able to modify HFVHF radios, and the info is on the web. But again, knowledge is not illegal. I *know* how to build one of those useless "descramblers" you see advertised, and I *could* learn how to build a bomb. But that's not illegal. Only if I build and explode one. That's what I can't understand about the "keyclown" stuff going on here. I think these people just get their jollies aggravating people. We can sit here and discuss linears, for example, all day 'cuz it ain't illegal to talk about it.

Talk all you want. Some people get their jollies from coming into the cb group and advising the keydown/keyclowns how to get their illegal 5 KW amps running more effciciently. (What a great service you do for them. I'm sure these folks neighbors and the legal cbers in their community who have to listen to this crap abusing the airwaves would want to thank you) Other people get their jollies from telling you exactly what an unconscionable ass you are.

You know... with out the swearing, the flooding, and the pornographic
images, this post is a very professional. mature post, and more likely
to be noticed.
I agree with you that people should only use legal radios w/o power. I
work with emergency communications and when the power junkies bleed and
splash so bad they render our ECOMM freq's useless lives are in danger.

This is truly a good deed and public service in this time of power
conservation and all. Just think, the radio operator may be consuming 9KW
and only producing 3KW output on his actual output. This would be a horrific
waste of resources.

Train

(What a great service you do for them. I'm sure

Just what we need. Another law supporting a business. If it's too hot then get out of the kitchen. This is America, land of FREE enterprise. Why should the Gov't get their fingers in the business of Americans? What's communistic is the gov't passing a law against a certain business practice. If they want to sell below their cost then so be it. It's their loss.

"Dave or Debby" <truth@planetc.com> wrote in message news:3aeea757@news.planetc.com...
Yep, this week Tenn. may / will pass a law to prohibit Wal Mart and others from being Communists (that is, selling Gasoline for UNDER what they pay for it). Because of some new Stooper Centers they put in recently with gas pumps, it seems like the little people got together to have the legislature make a law to prevent Wally from putting them out of business. I wish they would of done this because of their CB department years ago. I've had to sell CB's just over cost to take business away from Wally's Walton Mart. Wally's communist deeds have been fully documented by that college professor's book on what they did to towns when they came into Iowa. Everyone gets put out of Biz, while their kids get to be corporate slaves @ Wally's World. I am composing a song called "This is NOT Wally's world,..."! Hello & Good Morning all,
It's usually not sold below their cost, because
they have promised to buy a certain amount of gas,
they can get a better break than the normal station.
Same goes for cb's, if you buy 10 Cobra 148, you
will get a break. WalMart on the other hand can buy
100 Cobra 148's, so they will get an even better break.
The more you buy from the supplier, the cheaper the
cost.

Hello & Good Morning Mate! (Eh, it might
be night)
Anyway back to business, this overall is a
very good group, but in the past 6 months some
self appointed vigilantes have spewed nothing
but hate & discontent. While there are subjects
being discussed that are not to the likes of our
Federal Government, it is not against the law for
free speech. But there are rules set by some of
these people's ISP's, and as such if you look at
the headers carefully you can report these people
for posting of such vile, vulgar, pornographic material.
It really has started to simmer down as of late,
so maybe with all the complaints coming in, we can
ALL! (including legal & illegal) start to discuss
subjects again, not flame!

I fully agree with you, but the problem is that the Govt. (state and mainly federal) has become so communist through the 10 planks of Marx's manifesto, that there is NO FREE economy because of paper money (credit) created out of thin air, and all the other things they do UNConstitutionally to stick their RED noses into to mess things up and to DESTORY national industries (like the Steel industry they are doing it to now). So while I agree with you, anytime the laws go infavor of THE LITTLE MAN instead of Soviet Wally, I say GOODY against WALLY, because in the USSR, there is only 1 store, called Soviet-Mart!!!!! NO competition because Stalin KILLED the competition. Here Wally can't KILL people, they just kill business with the illusion that their prices are lower!!!!!
Dave!!!!!!!!!!!!

Pack.....
Do a lil' history reading on the Railroads and other monopolies (oil, etc) and WHY they were broken up. FREE enterprise is great when it works FOR you (the consumer), but can suck big time when used to bend you over a barrel. Unregulated FREE enterprise sounds and looks great till you get past the petticoats.
Walmart's may not deserve the legislative action taken... I think a Kmart moving into a small town might have the same effect. Where I am, Walmart is in competition with no less than 7 other superstores and from what I see, not doing the business I've seen some of their stores do in more rural settings.
BTW... about the 'below-cost' comment.... I don't suppose you'd have any problem with China (OH NO... now Dave/Debby will jump in!) or Japan 'dumping' their goods here until they drive American businesses under.... I suppose you could always go to China for a job.

You probably have a cable modem similar to mine, a 3com unit with a weird shape and plays chimes when it syn's to the system. Mine has no on - off switch either so I leave it on all the time, but I do turn off the computer. I run Windows 98 SE on Mediaone's network.

I know that the Windows "client" under networking has problems with security holes. When I had a dial-up account the only thing I had loaded was the TCP/IP protocol, and the network adapter, the client is not needed so I removed it. It took a bit of screwing around removing the client so it didn't kill the autodial feature. Once the client was removed I went to another web site that scanned the most common ports used and reported my system seemed to be "secure".

Now that I'm on a cable modem I just left the client installed and went to the web site and scanned my ports again. This time the report said I'm in "stealth mode" which is about the best you can do. MediaOne also blocks the ports used for printer and file sharing so you can have them turn on for the machines connected together at home without everyone else seeing those files and printers on the Internet.

As one more though the Russian buddy of mine, here at work, his son plays games over the internet using his cable modem. His son reported that he has detected several hacking attempts to get in to his computer. It looks like it may have been related to the on-line games he plays. Last I heard he finally reinstalled Windows several times tweaking the configuration then the hacking attempts stopped. I didn't ask specifically what it was he did since I don't seem to have a problem myself. So if the game(s) muck around with your network settings, or even Windows network files, for on-line gaming, then you may have a problem there too. Also be aware that some "freeware" installs what is called "spyware" on your computer that sends information about what sites you visit, and even what files you down load,

to another computer to be logged. Big brother is watching.

As a final comment most ISPs, particularly on high speed connections, scan the computers on their network to make sure people are not running "servers" that violate the terms of service agreement. Oh, are you running ANY kind of server software on your home machine? Cheap server software is a HUGE security hole too.

My system gets port scanned about a hundred times a day being on a cable modem. I use the full Norton package on mine and it has worked out well. Norton will also block unused ports from being used (Trojans) and keeps port scans out. While I have a hub on the system in the house, I have not had any reason to install a router but will be putting one in soon so the kids can be online while I am also. Using a router will also keep web based attacks to a minimum because your IP is never shown......Only the IP of the router. Something to consider.....

I could be a big deal if the party in question can't hear the weaker station asking them to clear the calling frequency. You get two locals yacking it up that are a few miles apart, and the station 30 miles out can't even break their squelch setting to get their attention to make a call.

I guess you enjoy getting robbed by mom and pop for your gas eh?
And I'll bet YOU NEVER buy you gas at "Wally World" to save a
couple dollars on a tank, do you? I kind of like paying $1.68 at "Wally
World"
as you call it, rather than $2.02 a gallon at mom and pops "Blue Chip"
market.

I wish they
> would of done this because of their CB department years ago. I've had to
> sell CB's just over cost to take business away from Wally's Walton Mart.
> Wally's communist deeds have been fully documented by that college

> Everyone gets put out of Biz, while their kids get to be corporate slaves
@
> Wally's World. I am composing a song called "This is NOT Wally's
> world,..."! Anyway, your thoughts on this State action on Wally are
> welcome, even though not CB related this time, but it actually is! I
guess
> you could never get any CB shops together in the past or now to stop
Wally,
> but since the low profit in Gas caused the little people to go against
Wally
> & they won!!!!!
> Dave!

Hmmmmm. "Wally" doesn't fix cb's or install or modify them now does he? Did
you ever
stop to thank that while they are hurting your sales business, they just
might
be helping your mod and install/repair business. I couldn't compete with
Lowes, Walmart
Kmart etc. on Televisions and Stereo equipment either, but guess who does
ALL
their repair work? I can't say I completely disagree with you (that scares

me) about
their undercutting the little guy, but when it happens you have to look at
a way to
profit from them.

60. FS: Uniden Grant LT CB & Palomar-4 Amplifier

Newsgroup: rec.radio.cb
Date: 2001-05-01 19:10:32 UTC
From: Sam <k4oc@k4oc.com>
Message-ID: <mc2uet04e3pebh61iapjs5vocpqlglomsb@4ax.com>
Source record: 80414

I bought these 2 items a couple of months ago as I was traveling a lot with my job. I am now changing jobs and will no longer be traveling ...plus I bought a new vehicle and will not be installing these in the new vehicle.

The CB is a 40 channel AM/SSB radio. I have the receipt and box for this radio. I also purchased a Palomar -4 Amplifier. The amplifier as matched with the radio generates 300watts on SSB. The ampllifier was also purchased a couple months ago as I have the original box it came in. The amplifier will actually generate more wattage than it is doing now if one drives it harder. I do not believe in driving amplifiers hard. I can talk on the thing during a trip...and reach down to feel the amp and it NEVER gets hot driving it the way I have been. The amplifier has a preamp also.
I can also throw in an Echo Microphone that was used with this setup however I have the original mic too.
Equipment in EXCELLENT condition.

The amplifier has about 10 feet of #6gauge wire for connecting to the battery.

The radio cost me $170.
Amplifier $175

_____
$345

I will take $175

>>From: "Dave or Debby"
.."Yep, this week Tenn. may / will pass a law to prohibit Wal Mart and others
>from being Communists (that is, selling Gasoline for UNDER what they pay for
>it). Because of some......"
WHILE I ALSO Fully agree with that law & the reasons for it, Let's
face it, A law that lets The GOVERNMENT tell a private company what they can
or can't sell something for is much closer to being COMMUNIST than what wal
mart is doing by asuming it is a free market. I guess this is an example Of
where a LEFT Wing law is embraced by right wing small business owners!!

Well...we certainly cannot call Landshark's an UNbiased opinion, can we?

He wants free speech - but he does not want illegal CB criticized. He wants to cuss others out - but he doesn't want to be cussed back.

Nice guy huh?

Hello Twistedhed:

Man thats for sure, I am sure I heard all these guys today on 38 lower Sideband, conditions must be goin nutz.

I have a old Johnson Model 350, 2 channel radio, SSB only, that monitors the local SSB channel, 38LSB. Boy the boys are being heard all over the world today, even Europe, the North Atlantic, and South Africa.

Not bad for a 45 year old 2 watts (when ya yell into the mic) radio, or is it the antenna? Or the good lookin operator?

Ya riiiiiiight.

Jay in the Mojave

PS: good lookin operator

Go ahead with my pleasure. I am like most hams I know and have met
over the years....who secretly listen and talk on CB frequencies on
their hf rigs.
I do not hide the fact that I talk on CB. The problem is that there
are so many dickheads such as yourself who lead a double life and at
the drop of the hat claim that the cb people are illegal idiots and
are low life. They also condemn the activity while secretly getting
on the cb frequencies and talking whether it is intelligent
conversation or by trying to jam the cbers.
Get a life 'jose. You can borrow mine if you like.

Hippocrites everywhere I turn and the world still spins.

I've used a couple routers but the Linksys models seem to be the easiest to work with. For about $150 you can create a LAN to run several computers from the same cable model or dsl connection. No computer on the lan can be pinged from outside, and the only risk is if you download a trojan which in turn works from the inside out. Be careful of your mail, don't use Outlook, and you are generally just fine.

Totally understandable. I've kinda read up on some of the "spyware" out
there and I'm kinda "iffy" on whether my McAfee VP Program actually works.
Some people have posted on another forum I frequent that McAfee has been
compromised and the VP Program is not worth anything. And you're absolutely
right. Big brother is watching.

I don't know..... while I agree that people shouldn;t run non type accepted equipment, and that they shouldn't use linears, the only people that have ever ridiculed me and my posts here.... are you guys the anti keyclown gang.

and I'll repeat my post that you ridiculed. You are so concerned about their illegal actions, your cross posting, spaming, flooding, posting against the groups charter ect. are all violations. so you are not setting the best example.

I said earlier I do not like the illegal radios/amps because they hinder communications, sometimes these are communications where lives are at stake, a few months back there was a really bad accident, 6 teenage kids out messing around in a convertable, the car overturned, all 6 kids were thrown from the car, One young man, the son of one of the county deputy sherrifs, sufferd 2 broken vertebre, he died twice at the scene, my squad parter zapped him and got him back. They had called in Life Flight, because of some asshole running illegal radios/power the chopper wasn't able to hear our landing instructions, it almost caused the choppet to hit some power lines in the dark when they were landing. one of the police officers ran over with a flare to signal them away from the lines. As I said I REALLY do not like illegal radios and the possible damage they can cause, personally I feel if someones life is in danger, and someone dies because an emergency msg can not get through because some jerk is abusing his "right to freeband amd run 3kw of power" the jerk should be sentanced for his malicious act.

But at the same time, I am a network administrator, I take the internet seriously, I take the rights of internet users seriously, plain and simple 2 wrongs do not make a right.

Oh now, what part of what I said about
both legal & illegal wasn't understandable to you?
I don't care if you post things like "This item is
illegal, but I do mind the mindless dribble you tirade
about those illegalities. If you didn't make the subject
headers so vile I probably wouldn't complain. Also
if you didn't mass post, plus post pornographic, you could complain all day
about legalities, but every time you
do any of those things I and I'm sure others will complain.

> right. Big brother is watching.

My opinion is that McAfee VP doesn't work at all. I know some people that have had that, came with there computers, and it has never helped them in the least... I recomend Norton over anything made by McAfee... I have the full-out Norton install, Antivirus, Family Edition Firewall, Rescue Disk, etc.

> No. I do not have any server software on my machine. Although an ISP
buddy
> of mine has told me that Download Accelerator Plus is a "spyware" program.
> I have that on my computer. It'll disappear tonight...

Yup, most of those software accelerators and whatnot contain Spyware. The kicker is that generally if you disable the spyware, the software doesn't work any more.. Incidentally, 99% of the time if you uninstall something that contains spyware, the spyware isn't removed with the program, and continues to spy just the same...

Again, I can come to your rescue with yet another piece of software (Yea, so I'm a little paranoid, sue me!) I have just about anything and everything available to keep myself secure, and my business, my business! Give it a try, I can guarantee you that you will probably find a shit load of spyware on your computer.. Here's the link:

http://www.lavasoft.de/

Software is called Ad-Aware. It searches your computer completely, registry, currently running programs, folders, individual files, etc.. It's the best ad-removal software out there right now, and the best part... it's FREE... Not cost at all, with continuous updates. Give it a shot, I can almost guarantee you will shit your pants when you see how much stuff is sitting on your computer, especially if you download a lot of freeware programs... Just be forewarned that if a program you are relying on uses spyware, it may no longer function once the stuff is removed...

To cure this, reinstall the software, and remove any EXE files the relate to the spyware from that program, or remove as many of the ".dll" files you can (One at a time), checking to see if the software still works. Remove only

the ones that allow the software to continue working... Generally this will disable the spyware, yet still allow the software to run by fooling it into thinking that the spyware is still functioning. Just remember in the future which programs you can't delete in order to keep the software running, so that you don't accidentally delete them in a future scan...

In any case, I would suggest that you get a hold of Norton Antivirus at the very least... Got some more good news for you... 30-day evaluation ($40 to buy)of Norton AntiVirus 2001 is available... If nothing else, you can use it to make sure your computer is clean right now.... Go here:

http://download.cnet.com/downloads/1,10150,0-10001-103-0-1-7,00.html?tag=srch&qt=Norton+Antivirus+2001&cn=&ca=10001

Hope that link works... If not, you'll have to copy and paste it... Got some more good news! I just noticed that Norton Internet Security 2001 Evaluation is also available online.. 30- Day eval. ($70 to buy)... It can be found under the same link listed above... When a deal... If you get Internet Security package, that will also get you the antivirus... They are packaged together...

I'm sure this will help you and others out a lot... Good luck!

Interesting thought, let me toss this atcha - probably this time last year, Wal-Mart was selling a device for $6.95. At the same time, a supermarket here was selling the same device for $12.95. The devices were identical, except the ones in Wal-Mart were made in America. The supermarket ones were manufactured in Mexico. The wholesale price, as you imply, can well be driven by how many you order. Consider this, if the supermarket simply purchased them from Wal-Mart (at Wal-Mart's RETAIL price), their profit margin would be a WHALE of a lot higher than Wal-Marts (I assume that Wal-Mart is not being paid to take them off the manufacturer's hands. This should be a safe assumption.).

Oh ... the supermarket got caught in cahoots with their biggest competitor and various manufacturers to stop printing cents off coupons in our area.

Conclusion - as soon as you THINK you found the bad guy, better check around. You're surrounded by 'em.

73 from Rochester, NY
Jim

ps - when I say identical, I mean it was the same international corporation. Same make, same model device. Same parts, except the Mexican parts were molded in Mexico and assembled in Mexico. Now, justify almost a 2 to 1 price difference.

pps - you should see the supermarket owner's house!! Wheeee ...

WHOA!

Buster, you are a LIAR!!! You show me ONE, just OOONNE post where *I* advised ANYBODY how to do one DAMN mod or fix ONE linear. I am sure you know how to forge posts to support your "cause", but IF I ever did post such, somebody besides you would remember it. The truth is, I have NEVER posted any such information, nor have I replied to functional questions about amps or modding radios. In threads or questions about such matters, I have remained silent. I am on record as opposing illegal OPERATION. But you know what? Unlike you, I can do so respectfully, and have done so right here in this newsgroup. I have yet to have anyone to whom I have expressed those views come back with hateful, vile and profane posts, or attacking me. Again, that's because I know how to express those views tactfully and in the spirit of friendly debate.

What I have said is that the act of discussing amps is NOT illegal--even providing info (even tho I don't)--only the USE of same is illegal. You are NOT a speech cop, you have NO power to tell people what they can or cannot say, and you wouldn't be doing it if you couldn't hide behind a keyboard or had to face the people you continually slam and bait in here. We even AGREE on the illegality of certain actions of people who operate outside the rules. What we DON'T agree on is your attempting to intimidate people into forsaking their rights to free speech.

Now, you can go back and forge me, I really don't care. It takes a really yellow-streaked coward to hide behind fake names, forge posts, and incite discontent on a newsgroup that is just that--only a newsgroup where people may say what they think. And that, "sir" is NOT illegal.

And my name is

Jerry

Because I am not afraid to say what I think and stand behind it as a man--not hiding behind some fake name.

True, but if the weak signal can't break their squelch, then
they wouldn't have been heard anyway. But I see what you're
getting at, the stations half way between.

But on the other hand... IF the 'calling frequency' is an
empty wasteland, then no one is there to listen for callers
in the first place.

Oh you all shouldn't complain, I saw @
Kings Beach California (Tahoe) $2.10 for
regular unleaded.

There are a few differences that should be pointed out. There are 40
legal channels on the CB. There are tens of thousands of newsgroups,
and just about anyone can start one. Newsgroups cannot interfere with
emergency communication. Usenet is not a limited resource (yet), but
the electromagnetic spectrum is very limited.

And the terminology should be set straight -- operators that use amps
and/or unathorized freqs do not operate within the sharply defined
'citizen's band', and are called "pirates", not "keyklowns" or
"freebanders". While any discussion promoting or condoning illegal
operation may not be illegal, it is most certianly off-topic in this
newsgroup. If they want to discuss pirate radio, they can go to
alt.radio.pirate or alt.pirate.radio (yes, that is two groups with the
words transposed so all the morons can find it) where I will never
bother them.

I have a 1996 Toyota Pickup, with a Uniden Grant Radio, a Wilson 5000 roof type mount, and quite a bit of engine noise, it kind of sounds like alternator whine, I have radio powered direct from the battery, and grounded to the battery. Any ideas on how to reduce or eliminate the noise. Thanks

Are you sure this is anything like a CB, or is it a VHF or UHF business band radio? If it is a business band radio, and you are trying to make it work on CB, forget it. Not enough info. One hint: Look on the back or bottom for the FCC certification tag and tell us what it says.

You are absolutely correct about everything up to this point.

> What we DON'T agree on is your attempting
>to intimidate people into forsaking their rights to free speech.

Free speech for one is free speech for all. I don't know the intent of
the goober-gang, but I have no intention of depriving anyone of their
right to free speech. If twistie wants to talk about 'freebanding', he
has that right. But if I want to post proof that he is a dumbass, I
have that right. And if he wants to whine about my posts, he has that
right. If I want to .... yada, yada, yada.

>Now, you can go back and forge me, I really don't care. It takes a
>really yellow-streaked coward to hide behind fake names, forge posts,
>and incite discontent on a newsgroup

I don't know about that. There are a lot of loonies out there that
will lurk, stalk, and hurt a person just because, say, their name
resembles that of someone they hate, or for some other contorted
logic. So I understand using a certian amount of anonymity, and anyone

can email me and ask me for my name. Many have. Some others would rather believe their fantasies instead of reality, so 'handles' or 'fake names' have some justification.

Also, the 'discontent' has existed among the legal operators that have been getting stepped on for many years, the cause of which is the illegal operators. The newsgroup finally gave the legal operators a voice that couldn't be drowned out by an overmodulated splatterbox. So if you are going ask "who started it", please look at the root of the problem.

But I do agree that forged posts are idiotic at best.

> that is just that--only a newsgroup
>where people may say what they think. And that, "sir" is NOT illegal.

No it isn't. Like I said before, if I think someone is a moron, I have every right to say so, and they have every right to say what they think. But it works both ways here, not like on the band where 4 watts gets drowned out by a kilowatt sparrow-cooker. Everyone can voice their likes and dislikes. If they don't like it, they don't have to read it. If they read it anyway, they don't have to reply. If they reply anyway, the whole process continues. And it is all legal.

>And my name is
>
>Jerry
>
>Because I am not afraid to say what I think and stand behind it as a
>man--not hiding behind some fake name.

Too bad twistie can't say the same.

Hello Railroader:

Ok alternator noise is a whine or sing type of noise, that changes its pitch with engine speed. The faster the engine runs the higher pitch the noise.

This is a maybe indication that your battery is on the edge of pooping out. This happened to me. I made up filters and such, but after replacing the battery one day, I noticed the alternator noise was gone.

I suggest you install a coil type by-pass capacitor (available at any auto parts store) on the field, and the output of the alternator.

Verify that the hood has a ground strap running from the hood to the fire wall to the fender, where the battery is grounded to the vehicles body.

The antenna can be placed (for trouble shooting reasons) away from the engine to see if the alternator noise decreases. Or you can have the truck running while unplugging the antenna PL-259 connector, if the alternator noise is gone then, than the radio is receiving the noise from the alternator and alternator wiring, that is radiating the noise into the air. A 88MH torrid choke and a .1 uF wired as parallel LC tank circuit, placed in line with the coax will filter out the alternator noise.

The manufactures can design in the radio a noise canceling design that will reject alternator and some ignition noise, but they won't. Probably because there not bitchen type of people.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Leland
Sometimes it is better to walk in to the office and go over the regs with the inspectors. God forbid that a CBer would walk into a commutations office. The deal was that all digital equipment had to be external and the Hamcom Unit met those criteria. One good example are the tone oscillators that come with many hand helds. A tone placed on a carrier just like your voice is legal. I do have a letter of permission from IC stating the same. But who cares I hear that CB is on the chopping block at the next WRC in 2003 so the band can be chopped up and sold to the rich corporate interests for a profit. Who knows we may all be outlaws after the next World Radio Conference and it would be illegal to own an 11 meter rig. That would put an end to all of the debate.

SSSHHHHHUUUUZZZZ, It's supposed to
be a secret Jerry. Ghez, I was looking forward
to shooting the shit and pick up some pointers
on how to be a good little CB'r from you Jerry,
but now you have let the cat out of the bag.
I guess to give everyone a chance, I'll wear a
name tag so you can pick me out of the pocket
protector people. Also, I'll be probably the only one
other than yourself that won't have a pocket protector.
Maybe I can buy Riley lunch at the cafeteria, and
discuss with him, show him the posts with headers
what kind of Hitler youth he is creating.

The Landshark

Hi!,

I know this is off topic, BUT! it's also of interest.

The price of gas going up, not just in the States,but in
Canada as well.

In Toronto,Ontario-(Canada eh!), the price of a public transit (BUS,
STREETCAR,SUBWAY)ride will as of June 1 2001 will cost $2.25 to get on the
Bus, and other modes of transportation mention, to go
across town to are workplaces.

I don't know where all these Post's are comming from
but I was just wanting to know what everybody on
this Newsgroup pays for their Bus rides to and from work?.

Thank-You for reading this Post.

And again I would like to say SORRY! for being off
topic.

Have a Good Day or Night.

Not hardly.... look into the Tarrifs and other trade barriers of the time. Lessee'.... prior to '33.... no child labor laws... if black lung killed ya', that was the price of a paycheck from the mining co..... strikes were settled by the state militia (called in by the company as 'negotiators')

> OF COURSE we have a problem
> with Japan or China or anyone else dumping foreign steel ....

Well it's obvious from previous posts that you have a problem with unregulated FREE enterprise (trade) when it involves Chinese Cbs...

Ever notice how gas prices differ greatly from state to state??.... It's the Taxes levied on the fuel that make it cost more elsewhere.

In the US we used CAFE regulation to try to 'downsize' cars by government order and penalties.... in other countries they simply make the price of gas too high (by adding taxes) for many folks to consider driving anything BIG.

England produces quite a bit of it's own oil, yet it's pump prices are far higher than ours.... Taxes!

What is the route of the power wire going from the radio to the
battery? Make sure you route it as far away from the ignition
system.....away from spark plug wires, distributor, etc.
This is just one thing to check.
Does the antenna have a nice stretch of metal to sit on?

Yeah Jerry, go out for a couple of beers and try and convince him there's no "problem" with export radios, 24-32 MHz CB mods, and illegal CB amplifiers, hence no reason to get all worked up. Take him aside and tell him you think hams oughta put on blinders and just mind their own business when it comes to CB.

Your right about that. I have been using this utility for a while now. I run
it on a semi regular basis to keep my system clean. Some of the spyware
seems to get load when you go to some web sites, or view messages on some
news groups and E-mails. I find a lot of "cookies" for places I have never
been to before, but got E-mail ads from them. The Ad-Aware utility IDs them
as spyware for removal. Hum....

That seems to be the case most of the time. I remember calling CQ on 52 many times, and only occasionally would somebody return the call. On the other hand I'll bet that a lot of Hams just sandbag it on the side. If the calling station does not sound interesting they just don't bother to reply. I try to monitor 52 while mobile if I'm not monitoring another frequency.

I had an Extra flash me the calling frequency using hand signals while driving down the express way at 65 MPH once for a QSO. He knew I was a Ham from the antenna, and the callsign license plate. We yacked for a while then got off the road and pulled in to a parking lot. We checked each others mobile set up out. He was running a Kenwood TS-50 and a commercial Motorola rig programmed with some local 2m frequencies in it. I was still running my HT with a mobile amp and a VOX head set because I didn't get my current Icom 706G until later.

2. VIOLATIONS OF EARTHLINK'S ACCEPTABLE USE POLICY
The following constitute violations of this AUP:
a. Illegal use. Using the Services to transmit any material (by email, uploading, posting, or otherwise) that, intentionally or unintentionally, violates any applicable local, state, national or international law, or any rules or regulations promulgated thereunder.
b. Harm to minors. Using the Services to harm, or attempt to harm, minors in any way.
c. Threats. Using the Services to transmit any material (by email, uploading, posting, or otherwise) that threatens or encourages bodily harm or destruction of property.

d. Harassment. Using the Services to transmit any material (by email, uploading, posting, or otherwise) that harasses another.

e. Fraudulent activity. Using the Services to make fraudulent offers to sell or buy products, items, or services or to advance any type of financial scam such as "pyramid schemes," "Ponzi schemes," and "chain letters."

f. Forgery or impersonation. Adding, removing or modifying identifying network header information in an effort to deceive or mislead is prohibited. Attempting to impersonate any person by using forged headers or other identifying information is prohibited.

You received alot of good advice, but if none of that checks out, don't discount the fuel pump. Had this problem with a Chrysler van some years back, also thought it was the alternator. The only way I was able to cure that particular problem was to stay away from the after market pump.

That'd be a bet you'd win......

Whenever I've got a scanner on, I monitor the call freq.... as do MANY others I know. While mobile, many in our club also keep 146.535 stored as a priority scan too... it's kinda' the club's pet simplex spot. (AKA the 'super secret Hockey freq')

Keep in mind thought that depending on a simplex freq for emergencies is like running out of downtown and into the middle of a field to yell 'help'... there may be someone around, and there may not. As you already know, 2m simplex is generally far more restricted in range vs what you can cover via most repeaters... in an emergency, a repeater would be the place to yell 'help' and be more sure of a response.

Whatsa matter sparks? No one kick you today?

I don't know the intent of the goober-gang,

"Sure you do. You're part of it."

but I have no intention of depriving anyone of their right to free speech.

"Only because you are impotent.(snicker)"

If twistie wants to talk about 'freebanding', he has that right. But if I want to post proof that he is a dumbass, I have that right. And if he wants to whine about my posts, he has that right. If I want to .... yada, yada, yada.
Now, you can go back and forge me, I really don't care. It takes a really yellow-streaked coward to hide behind fake names, forge posts, and incite discontent on a newsgroup

I don't know about that.

"Of course you would take issue with that. You IS one!"

There are a lot of loonies out there that will lurk, stalk, and hurt a person just because, say, their name resembles that of someone they hate, or

"Or matches their posts that they signed when they were still green."

for some other contorted logic. So I understand using a certian amount of anonymity

"Again, you have no choice. You are a troll, only self admitted when caight. Like the small child caught with their hand in the cookie jar, saying, "Look what I did."

, and anyone can email me and ask me for my name.

"Arrogance. Why would anyone want to do that? It's Sparks."

Many have. Some others would rather believe

"And still others compulse with mental masturbation over what others think. It is a poor attempt at making up for the deficit of what poor porn girl can't control,....others. All comes back to an acceptance problem."

their fantasies instead of reality, so 'handles' or 'fake names' have some justification.

"No, they have none. You fight for their credibility to be recognized because you would have no credibility if not for the anonymous ones. Just 'cause you say it, don't make it so. Folks that use your type language when they are angry show a complete lack of control. How much integrity can be placed in one who cannot control their rage, spews obscenities when upset, and hypocritically violates their own code of "ng etiquette" they preach to others?"

Also, the 'discontent' has existed among the legal operators that have been getting stepped on for many years, the cause of which is the illegal operators. The newsgroup

"LMAO. Here comes his "for-the-good-of-the-ng" tripe. You really want to see the flames disappear Sparks? Of course you don't."

finally gave the legal operators

"See what you are dealing with?"

a voice that couldn't be drowned out by an overmodulated splatterbox. So if you are going ask "who started it", please look at the root of the problem.

"Such as your constant forging."

But I do agree that forged posts are idiotic at best

(YAWN) But that doesn't stop you Sparks.."

that is just that--only a newsgroup

where people may say what they think. And that, "sir" is NOT illegal.

No it isn't. Like I said before, if I think someone is a moron, I have every right to say so, and they have every right to say what they think. But it works both ways here,

"Translation: Sparks can stick his chickiehawk beak where it doesn't belong and then lie about it. If you disagree, it will become personal."

not like on the band where 4 watts gets drowned out by a kilowatt sparrow-cooker. Everyone can voice their likes and dislikes. If they don't like it, they don't have to read it. If they read it anyway, they don't have to reply. If they reply anyway, the whole process continues. And it is all legal.
And my name is
Jerry
Because I am not afraid to say what I think and stand behind it as a man--not hiding behind some fake name.
Too bad twistie can't say the same.

"Pot. Kettle. Chickiehawk black. Your envy of me has me embarrassed for you Sparks."

Your right about the repeaters. Seems like most people hang out on their favorite machine mostly. For a little more "privacy" some move to simplex. There are plenty of repeaters around the area, many get little use, especially the 70cm machines.

I remember being on the Detroit 444.000 MHz machine one night when a breaking station ID'ed themselves as an "air nautical mobile" station. The guy was looking for a local repeater to make a quick phone call using the autopatch. The guy was flying a private aircraft for a landing at Detroit Metro at the time he made the call. He heard the activity on his approach to the airport, and asked if there was an autopatch on the machine. That was just a bit different.

There was another time when a station asked for a break when I was on the Southfield 2m machine one night. Turned out the Ham wanted to know if this was really a repeater and where it was located. The Southfield machine does not use a courtesy tone of any kind and just a CW ID. Without the CW ID it would seem like it was simplex. It turned out the breaking station was in upper state New York on top of a 3000 foot mountain using a beam antenna and there was a band opening. Got to talk with him for about 10 to 15 minutes before he faded out. While he was getting in to the machine it was with full quieting too. Not bad for FM DX.

Before I forget I was at the Rams Horn late Sunday night, a couple of weeks ago, in Madison Heights, eating dinner with a lady friend I know. I noticed a group of Hams in the corner, some wearing the USECA club jackets. You by any chance know about that or were you one of the group? Looked like about 8 to 10 guys, and it was around 11 to 12 PM. I think I recognized one of the younger guys from the balloon launch. I think he's the one with a dark blue or black SUV with the ATAS-100 on top. I don't remember his name.

182. Switching the mic with an audio line input

Newsgroup: rec.radio.cb
Date: 2001-05-02 18:49:21 UTC
From: Michael Brooks <icclesdog@freenetname.co.uk>
Message-ID: <tf0ll2jr8lre64@xo.supernews.co.uk>
Source record: 80582

Does anybody know of a way to covert the ordinary four pin mic input into a line level input? I would like to be able to input an audio signal and broadcast it, as I have better microphones and a mixer at line level etc. I am looking for slide switch to trip the transceiver to transmission mode within the covertor.
I am aware that the difference in audio quality would be small as it is only narrow band transmission, but trust me it will be easier with a mixer.
If it helps, the unit concerned is the smaller mobile 4w (amplified to 25 watts) Kernnow PR 27/94 model.

Thanks,
Michael Brooks

Look at it this way.

The poor guy has decided (with no help from us) that you are (at various times) Doug Adair, Glenn Sparks, Leland Scott, and the entire AntiTwistedhed Posse.

He also stated that he can't possibly be wrong about anything. So, naturally he'll never email you. He doesn't want FACTS to intrude on his fantasy.

Hey, if you just wait long enough he'll decide you're Elvis Presley!

* * * This Masquerade * * *
(Leon Russell)

Are we really happy with this lonely game we play,
Looking for the right words to say?
Searching but not finding -- understanding anyway,
We're lost in this masquerade.

Both afraid to say we're just too far away
From being close together from the start.
We try to talk it over, but the words got in the way
We're lost inside this lonely game we play.

Thoughts of leaving disappear each time I see your post,
And no matter how hard I try
To understand the reason why we carry on this way
We're lost in this masquerade.

We try to talk it over, but the words got in the way
We're lost inside this lonely game we play.

We're lost in a masquerade.
And we're lost in a masquerade.

NOPE!

Won't happen. I am sure that the subject will come up in his forum
and get lively discussion. I already TOLD you I am not in favor of
illegal operation of any kind. It's just that, regardless of how *I*
feel, I am not a radio "cop" and have no authority to go around telling
people what they should/should not do. You know, if you are such a
legality fanatic, why can't you just read the group, and report all you
want to without all the flooding, ranting, and arguing with people? I
know the answer to that, too. You get your jollies off on preaching at
people and starting arguments. Like I said, I have expressed my opin-
ions on illegal stuff before. The difference between you and I is that
I can do so tactfully, present un-embellished facts and sign out with my
REAL name. Why is no one flaming me? People who are doing the pirating,
amp running, and "freebanding" already KNOW they're illegal, so your
raising hell in here does nothing except thrill YOU. Twistedhed, for
example, already knows my position and we have had several "debates" and
private emails. Why isn't he after me? Because, while I may not agree
with what he SAYS he does, I still respect him as a man and address him
accordingly, and he does the same to me. Consequently, we are able to
talk about issues without us getting mad. If you presented your "case"
with some tact, you might actually "influence" someone to begin to
agree with you. What you are doing now is making people mad, causing
them to blame ham radio for your vendetta, and causing embarrasment to
CBers and hams alike. You are doing more harm than good.

G'day

We are currently reworking our mobile communications/commandpost trailer, so I have a question, we are running a plain old 40 cb base, a kenwood UHF radio with 6 freq's we have a license for, Amateur radio (we have hams as members and I am soon taking my exam), and soon will be licensed for GMRS. So my question is, even though the CB is in a totally different band, the GMRS, UHF and 2m/440 radios will all be running in same approximate bands (on 440 with the amateur radio/the 2 meer isn;'t in the same range obviously), what is the minimum distance between these antennas before they cause problems for our operators?

Reminds me of the times during the early days of 2 meter FM when we used to turn the squelch tail on the 146.79 repeater in Washington, PA all the way down to nothing. People would try to key up the repeater and hear the tail. They would initially assume the repeater was off the air until someone would speak. Then a QSO would take place and some would think they were working each other simplex. How they thought that was possible when they were all transmitting on 146.19 and all receiving on 146.79 is beyond me!

If you didn't get the email, then WHAT exactly did you think was an
anonymous nic?

> That means one of two things: A)
>You mistyped the addy, or B) Your email is automatically diverted from
>my inbx, such as is the spam, and there would only be one reason for
>that, if your addy was flagged.

Or C) your email isn't twistedhed@webtv.net. But how can that be? It
didn't bouce back. I checked and it was spelled correctly. I checked
by sending email to myself and it worked. I didn't attach anything to
it, and I only sent it to you. So why didn't it get there?

> Besides, whatever you have to say is of
>no interest to me. You can't go one day without telling the truth.

I see, you have already decided that everything I say is a lie, so
there is no need to even acknowledge the email. But then again, if I
was lying, that would be more proof, wouldn't it? You could post an
email from me using someone else's name. How could you resist
something like that? You couldn't, that's how I know you got the email
and are lying in order to sustain you delusions.

> The
>only thing I like to do is watch you embarrass yourself with more

What's even more pathetic is that this "twistedhed" guy has gotten so much heat for his views that he's now backpedaling like mad, trying to convince people that he no longer believes in the freeband hobby he so passionately upheld in his "Freewaves" article. Maybe he ought to take up a less stressful hobby, like painting :)

http://sporadic1.tripod.com/page7.html

He's never going to get the sorry excuse for an article at the address above
to
disappear no matter how much he regrets having written it. His past is
catching up with him.

What's even funnier is he bad mouths Hams on this news group, but the editor
of the on line zine he wrote the article for is a Ham himself, Keith Herzig
(KC5LPQ). Hummm. I wonder what Keith has to say about him?

Try http://cbcintl.com
The Tri-Power Amplifier schematic is there.
50 average watts equals 200 peak watts.
So don't let the numbers fool you. Go for
at least a pair of 455s. My website helps
explain all this power and modulation crap.

Hopefully, there will be some knowlegeable folks who can respond with more info that I can. Obviously, there are repeater sites on hill/mountains that share the same site for business band repeaters as well as amateur repeaters (Bristol Mountain in our area comes to mind - with a few amateur 440 repeaters as well as business band repeaters). One though I have is to mount the antennas (obviously, you'll be using HTs, therefore vertical polarization) at different heights. You might consider mounting them on one structure, all vertical antennas fairly widely spaced, with the 2 meter antenna in the middle. This would tremendously reduce pickup of the business band antenna of the amateur one (and vice-versa). Then again, you might use a duplexer and simply use one UHF antenna.

Well, gang?

>Dave!!!!!!!!!!!!

Are you trying to say that a crime is not a crime if there is no
'damage'? If Joe Bloe steals a car that appears to be abandoned, that
is not a crime? For starters, Joe doesn't really know if it has been
abandoned. Second, there are proper methods to obtain legal ownership
of an abandoned vehicle. Third, Joe's intent is to steal it,
regardless of ownership. Joe is just a petty thief that want's
something for nothing (at least until twistie blows his head off and
eliminates the competition).

Have you also considered that the damage exists but you are not aware
of it's extent? Since the EM spectrum is a limited resource, it is
under government control. But almost any citizen has the right to use
it if they follow the rules. The rules are in place to prevent station
A from interfering with station B. If unlicensed station C pops in,
how long will it be before unlicensed stations D through ZZ come to
turn the band into a worthless spectrum of noise that is useful to
nobody? And when that becomes useless, what bands are next? That's
damage, and the victim is the public. Hence the phrase, "The People
vs. Joe Bloe".

No, I wasn't in the group... I was either home collapsed from working on the boat hull (paint, scrape, wax-on, wax-off) or on my way home from the marina... it was a LONG day for me.

They're certainly folks I'd know, if you caught any of their calls. There's several locations about town where USECAns meet casually... there's a whole bunch of Madison Hts & Hazel Park hams in our club.... we pretty much draw from the entire tri-county area & beyond.

BTW... check the cover of the last World Radio magazine... something there you might recognize! (not available on-line)

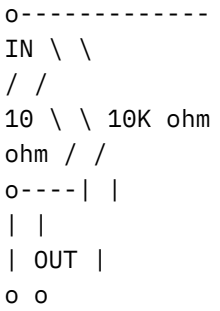
> within the covertor.

I have put the line level across a 10 ohm resistor and then fed the hot
through a 10K resistor. Ground is taken from the ground side of the 10 ohm.

That was used for a car stereo installation. (Not mine, I use all low-level stuff)
You may need to adjust the values for a better match or for volume changes.



The input may need several K to match the input and the output
may need about 100K to 500K to drop the voltage to a mike level
.

The biggest problem would be receiver "desense". It's
kind of like trying to see someone holding a candle
while someone else is shining a searchlight on you.

The more wideband a radio is, there's more stuff that
can cut back your front end from overload.

221. FS: Sonar FS-23 tube-type base CB with Turner +3 mic

Newsgroup: rec.radio.cb
Date: 2001-05-03 13:22:01 UTC
From: k5dh@raytheon.com
Message-ID: <ZXcl6.122$px.3736@dfw-service2.ext.raytheon.com>
Source record: 80520
Cross-posted to: rec.radio.swap,rec.radio.cb

For Sale:

1960s vintage Sonar FS-23 tube-type a-m base station CB with Turner +3 desk mic and photocopies of owner's manual and Sams Photofacts manual. Transmitter works fine, but receiver has low sensitivity. Power supply has been rebuilt, all tubes are good, alignment is good. Not sure what the receiver problem is. Front panel shines, knobs and meter face are original, speaker grill is not dented. Cabinet needs to be repainted, but is presentable as-is. Missing the little cover over the holes for the optional tone signalling unit. This set needs troubleshooting and repair. It is not plug-n-play. With a little effort, this will be a great radio for someone. The old Sonar sets are well known for having outstanding transmit audio, thanks to their true push-pull plate modulation. See picture:

http://www.qsl.net/k5dh/forsale/fs23.jpg

The desk mic is a bit more scratched-up than the picture shows it to be, but it's not "trashed" and it works fine.

73,
Dean, K5DH

Desensing may be a problem with some of the newer, high power rigs. You shouldn't have much problem between the 2 meter rigs and the others but you might, and probably will, have some desensing between the 440 ham rigs and the GMRS rigs.
But to answer the original question the antennas should be as far apart as 1/2 wavelength of the lowest frequency. So the CB antenna should be at least 16 feet from any of the other antennas. This will reduce the possibility of significantly changing the radiation pattern of the antenna and hopefully reduce SWR problems.

While I will agree with you that
if there is a legitimate operation going on
those Freq., freebanders should respect that
just as if it was a genuine emergency on a CB
channel.
But the analogy of the lake is bunk! Trespassing
is a law, freebanding is violating rules, two different
actions all together. The FCC along with the IRS
and a few other government agencies are the only
ones that can enforce these rules, and as such local
municipalities have no jurisdiction over these services.
Now comes into play is the new rules allowing local
agencies to go after such people. If they are disturbing
ones way of life, by bleeding all over neighbors equip
then the local law can go after them. If the are out of
band, not disturbing anyone, then the local law has
no recourse, unless the search & rescue can inform them
of this person.
You see rules & laws are two different meanings all together.

I've made a few changes since the last time I posted, such as shortening the ground radials to about 5ft each and putting 2 turns in the matching coil. It works OK but I could sure use an MFJ-259!! I also signed up with the American Eagle SSB club and the new number is 544.

I have a 2001 Dodge Durango SLT+ with a full center console and a 1999 Dodge Ram 1500. I am planning a road trip / caravan from Texas to Colorado and would like to install two new CB radios, but without drilling into the dash or lower kick panels. Can anyone suggest good CD mounts or alternative solutions? Thanks!

Hello & Good Afternoon,
Now I responded in an orderly manner,
stating my opinion in a polite way, you on the
hand obviously have no class.

> But your point is they should keep freebanding in between emergencies?
What
> a crock of shit you are pushing, Landshark.

That is going to happen no matter what, I was just
stating a fact, in an emergency, no matter what meter
it is, 2-160 you have to stand by and let it be handled.

> Another half-baked crock of shit. Al Capone went to Alcatraz for violating
> Federal Income Tax "rules".

Again, as I stated, the IRS, FCC, FAA among other
organizations don't have to follow laws. They only
have to enforce rules. It is the duty of "Law Enforcement
officials" to enforce the laws.

> Huh??? What the hell are you on about here? Search and rescue...if they
are
> not disturbing anyone out of band....? Hey Sharkie, are you trying to
defend
> freebanding again?

See third paragraph for same answer please.

> What? So "rules" are OK to break? What exactly are you, a retarded ex-con?
>

You know I was going to respond to this, but I
just considered the source was enough of response
itself.

You know the problem with you is that you, can't
hold a discussion on a grown up level.
All you can do is resort to trashing the person
when you feel cornered. I suggest you get a dictionary
and look up the meanings of those two words, because
while they are similar, there a differences between the
two.

> channel.

Again the point being missed is the Freebanding station DIDN'T OR CAN'T HEAR the emergency traffic! The simple fact also being if the Freebanding station was not there in the first place there never would have been a problem, period! This is the WHOLE POINT about the FCC, licensing, and playing by the rules. The bands are allocated so as to reduce or eliminate exactly the problems discribed. So you talk about "respect" well how about respecting the fact that somebody else has exclusive rights to use those frequencies, and the freebanders don't belong there.

We can carry your logic above a step further. Lets also say that we give a wink and a nod to freebanding. Lets say somebody died because of communication interference due to some Freebander. Then the Freebander should be charged with a murder offense, and I don't care what the excuse for the interference was either. Remember, as an example, if somebody died from a heart attack during the commission of a crime the person committing the crime is charged with first degree murder, even if the criminal was totally unarmed. So is a Freebander prepared to pay the ultimate high price, his life? The Freebander in the story could have found himself exactly in that position had anyone died. Think about it.

I wish people would actually READ those "rules" and find out for
themselves that they are just as much law as any other law.

So you don't have the slightest idea what the regs are governing CB radio in Norway? That's funny. You were awful quick to jump in and infer that linears were allowed in Norway. Or maybe you were just bluffing.

Hello & Good Afternoon Sparky,
Well as I have stated, they are only rules,
but the FCC can enforce these, the same
as the IRS can enforce their rules.

So when some guys signal, running a bone stock Cobra 148, bounces in
where there's been a multi car pile-up,
people are dying, but no one can get out because his signal
bouncing in, not by any fault of his, he should be charged
with murder too?
Nope, sorry he can't be charged with murder, operating
a radio out of freq. yes, but not murder. Again the key
to this is rules, not laws.
Again, it is against the rules to operate out of band,
but is not against the law, and as such can not be
prosecuted for breaking any laws.

>Remember, as an example, if somebody died
> from a heart attack during the commission of a crime the person committing
> the crime is charged with first degree murder, even if the criminal was
> totally unarmed.

In some states yes, others no. It just depends
on where you live. Again, these are laws, and as
such are prosecuted via district attorneys. In the
case of the FCC, they do not need attorneys. All
they need to do is send a NAL, you plead your
case to them, they carry out what ever action they
seem fit, no attorneys, no judge, no trial. Same goes
for the IRS, they don't need a search warrant, seize

your property, assets, garnish wages all without
the courts or attorneys.

You make me laugh they are only rules? What do you call it when they fine your stupid ass 15,000 is that a law you broke or a rule what is the difference it is illegal just the same, and you can be fined and found guilty in a court of LAW. You are a very stupid person landshark you suprise me by your idiotic remarks. So you are saying we can use the police band in between there conversations? I mean like what just stand by and let it be handled HaHalet them do there thing then jump in when they unkey the mike, you are a classhole for sure. And you also say the IRS,FCC etc doesnt have to follow rules ? Another idiot statement. No you must follow there rules or face the penalty if and when caught. Everytime you speak another asshole is born.

> guilty in a court of LAW

Really, Your wrong. You don't go to court with the FCC, you meet
with them, in their offices, under their thumb, they don't have to
use the courts. The guilty on the other hand have to hire a lawyer,
take the FCC to the courts to either have them remove the fine or
reduce it. Yes you can be fined, but you are not guilty, because
you are never in any court, so "laws" never come into play.

In case you didn't notice, the section that deals with CB is written in the format of 'rules' so even the dumbest of CBers like twistedhed can have quick reference to the applicable laws, and removes the need for them to cite chapter, part, section, subsection, and paragraph. The same format of 'rules' is used for other services under the same title.

The CFR is statutory law, as passed and amended by Congress. The fact that a law may call itself a 'rule' doesn't revoke or rescind any of it's legal authority. This argument that a rule is not a law (based on a logical fallacy called an 'equivocation') has already failed in the courts.

The CB rules are indeed law. The have been written as law, passed as law, enforced as law, they have survived the challenge that they are anything other than law. If is walks like a duck, swims like a duck and quacks like a duck, it probably aint a 'rule'.

The arguments that the FCC doesn't adhere to 'due process' and
'unreasonable search and seizure' have also been unsuccessfully
challenged in the courts.

The problem is that some people are ignorant of how the law works.
When you intentionally operate any RF transmitter, you are agreeing to
comply with FCC regulations, and you agree that you are subject to the
penalties if you break them.You can indeed challenge a statutory
assessment or forfeiture in court, but few people do because the FCC
very rarely accuses the wrong person. There aren't too many loopholes
that the FCC hasn't already eliminated. There ain't no free ride.

260. Re: Homebrew 5/8 wave pics

Newsgroup: rec.radio.cb
Date: 2001-05-03 23:00:34 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3AF1E312.12609CC9@qnet.com>
Source record: 80610

Hello "dB": What say be happening?

Those are great pictures, taking pictures of antennas isn't easy.
Its easier to take bad photos of antennas that good ones, I can attest
to this, big time.

I don't know your 5/8 wavelength ground plane dimensions, but hear are
some suggestions.

Vertical element length, 256 to 260 inches, for 27.205 MHz, which is
channel 20, the ball park close center of the CB Band. Add on a Top-Hat
assembly. This makes the antenna look longer that what it really is, so
the impedance matching length circuit is made less to deal with. Use
coat hangers, welding rod, or 1/8" aluminum solid rod, in a 10 inches
from the center of the top vertical element, made up to be a cross, with
equal 10 inch lengths hanging over the antenna, that are connected to
the antennas top element, in a horizontal plane. The Top-Hat will also
significantly reduce atmospheric noise.

Horizontal elements length 103 to 105 inches long. You can play with the
lengths a little bit here. You will notice that the ground plane radials
length will change the antenna SWR, and bandwidth.

Get a MFJ 259B antenna analyzer, and make SWR vs Frequency Charts, just
simple charts with a SWR of 3 to 1 scaling down to 1 to 1, with a
frequency spread of say 3 MHz. Document your findings, with the antennas
construction details written on the back of the SWR charts, and you will
be amazed as what you will learn.

The Vertical Element, that appears to have black electrical tape, to
insulate it from the base assembly, adds way to much unwanted stray
capacitance which will send a significant amount of your signal to
ground, TILT! Use a solid piece of wooden or fiberglass rod to elevate
the main vertical element above the base assembly, by 2 to 3 inches.

The Impedance Matching coil, needs to be approx. 45 to 55 inches long,
that can have the length adjusted, so that the antennas length, can
easily be adjusted. Make a Trombone looking loop, horizontally, approx.
45 to 55 inches total length, that is in series with the coax and
antenna that is insulated from ground. Then at the coax to Trombone loop
connection, make another loop to ground that is approx. 37 inches in
total length, that is also adjustable in length.

Adjust the longer loop, then the shorter loop for the lower SWR, you may
half to readjust the loops a few times to get a 1 to 1 SWR.

When the antenna is working like it should, different lengths in the
mast will not change the SWR.

Install the antenna up as high as you safely can.

Hammer down!

Jay in the Mojave

Good Afternoon Sparky,
Well I'm sorry I have to disagree with you, so
instead wasting a large amount of bandwidth to
prove each others point, I will stand down and
let it rest.
I do have one question though, why do you
feel that it is necessary to call someone else a
name, even though they have nothing to do with
yours and mine conversation? "dumbest of CBers "
I mean, I haven't once in this thread said that Ham's
are real snob's and so forth. Just curious.....

You can make a 5/8 without a loading coil, by the way.
You use a 1/4 wave section of the center conductor and plastic insulation
ONLY, of RG8/u, INSIDE the center of the radiator.
It works well. If you want the no coil design I will be glad to supply it.

Then I would suggest you pick up a book or two on general law, another book on FCC law, check out some case law, study the CFR a bit, talk to a lawyer, and send an email to uncle Riley. I think you will find that they all agree (except maybe the laywer - they will believe anything if you pay them enough).

First, I'm not a ham. I have said that more than a few times. Second, I very rarely call anyone names, except for a couple particular individuals here that seem to enjoy taking liberties with the names of others, so a take a few liberties myself. The reason I injected it into my post is obvious to anyone that has been following the flamefest, but since most people have ignored it, as they should have, I will apologize. But I will never apologize for anything I ever say about lawyers;-)

267. CB radios not yet over and out, good buddy

Newsgroup: rec.radio.cb
Date: 2001-05-04 03:20:25 UTC
From: Lennie Beecroft <lbeecroft8041@home.com>
Message-ID: <Zdpl6.11398$2_.4050354@news3.rdc1.on.home.com>
Source record: 80617

Like old cowboys, CB radios may be riding off into the sunset of American lore, but they still have die-hard fans, serve a commercial purpose and offer a link
to the romance of the road.
For the general puplic, CBs have largely been muscled aside by cell phones and cyber-chat. But truckers still use CBs to gab and spread the word about speed traps.
And from time to time, the little black CB receivers still crackle with chat on non-trucker channels, too.
That's music to the ears of folks like Jesse Thompson of Milford, Conn., who recalls when CBs were a way to stay in touch and call for help in an emergency.
''I had a CB radio, and I actually used it to call the police once because I saw a liquor store being robbed," said Thompson, who is now 36 and hasn't seen or heard a CB radio since the 1980s.
"CB" stands for citizens band. It's a slice of the public airwaves available for anyone with the proper equipment.
But CB radios are a uniquely outdated way of communication, said Rebecka Torn, Ontario Trucking Association spokesperson. While there are no statistics on how many cell phones and satellite systems are now installed in North American trucks, explains Torn, there is a special allure to the gadgets that helped create the telecom craze.
CBs appealed to the long-standing tradition of freewheeling rogues fighting the good fight against corrupt authorities. It was the stuff of movies, like Smokey and the Bandit and Convoy, and the television shows like B.J.and the Bear--- all of which featured truckers who used CBs to outmanoeuvre the police.
''Ninety-nine percent of all truck drivers have CB radios," said a radio repair technician, who like many truckers prefers to go by his CB handle, or nickname,Raccoon. " I've bulled with other truck drivers for 400 miles," said a 49-year-old Texan trucker, who calls himself Lion Tamer. "Sometimes, even a state trooper will get on there and bull with me.
they can be friendly."

>>use the courts. The guilty on the other hand have to hire a lawyer,
>>take the FCC to the courts to either have them remove the fine or
>>reduce it. Yes you can be fined, but you are not guilty, because
>>you are never in any court, so "laws" never come into play.

hey Landcarp,
You believe that shit? Are you nuts? Congress passed the communications act
of 1934, the supreme court has upheld the constitutionality of that
creation,
and the establishment of the regulatory body that controls enforcement of
the act, the FCC.

THINK LANDCARP THINK!

You and others of your keyclown kind are POLLUTERS. You dump dirty and
spectrally
ugly RF out of the shit you call radios. you do it on illegal frequencies.
Same shit as an industrial polluter pouring chemicals into a river. Your
radios and amps are the "chemicals", the frequencies you use are the
"river".

The frequencies you use, like the river, are not set aside for people to pollute. Thats why we have the CB band in this case. Read that "Toxic waste disposal site".

THINK LANCARP THINK!

RF POLLUTION CAN BE AS BAD AS WATER POLLUTION.
Look, The EPA is charged with handling the environmental problems in this country. They are ALSO a congressionally created enforcement agency, just like the FCC.
THEY bust people all the time with "regulations". Regulations in the EPA and the FCC's case are just sub-parts to a Public LAW that was voted on by Congress. In the case of the FCC it was done in 1934 to make the FCC come into being.
Your ACTUAL criminal charge would be something like "Violation of the Communications
act of 1934, Part 95, sub part blah blah."
The FCC is just being lenient. The cost of criminally charging you is high, but don't tell em they can't when you get busted. They have done it to a LOT of people, and the court has sent those found guilty<(99.9999999%)> to jail or put em on probation with a federal felony on their record.

In short, you keyclowns are totally full of shit and obviously were out blowing
each other during 6th grade government class. That is, if you stupid asses even made it to the 6th grade.

Your statement is unoriginal and weak.

So, you base your respect for people on whether or not they follow the laws that your local, state and federal government imposes on them?

Let me ask you this then, if you were around during prohibition (were you?), would you have disrespected bootleggers and consumers of alcoholic beverages up until the very point where the 18th amendment was repealed?

Good thing all those amendments came along abolishing slavery and granting women the right to vote or you still wouldn't have respect for women or Negroes.

>> Really, Your wrong. You don't go to court with the FCC, you meet
>>with them, in their offices, under their thumb, they don't have to
>>use the courts. The guilty on the other hand have to hire a lawyer,
>>take the FCC to the courts to either have them remove the fine or
>>reduce it. Yes you can be fined, but you are not guilty, because
>>you are never in any court, so "laws" never come into play.

hey Landcarp,
You believe that shit? Are you nuts? Congress passed the communications act
of 1934, the supreme court has upheld the constitutionality of that creation,
and the establishment of the regulatory body that controls enforcement of
the act, the FCC.

THINK LANDCARP THINK!

You and others of your keyclown kind are POLLUTERS. You dump dirty and spectrally
ugly RF out of the shit you call radios. you do it on illegal frequencies.
Same shit as an industrial polluter pouring chemicals into a river. Your
radios and amps are the "chemicals", the frequencies you use are the "river".
The frequencies you use, like the river, are not set aside for people to
pollute. Thats why we have the CB band in this case. Read that "Toxic waste
disposal site".

THINK LANCARP THINK!

RF POLLUTION CAN BE AS BAD AS WATER POLLUTION.
Look, The EPA is charged with handling the environmental problems in this
country. They are ALSO a congressionally created enforcement agency, just
like the FCC.
THEY bust people all the time with "regulations". Regulations in the EPA
and the FCC's case are just sub-parts to a Public LAW that was voted on by
Congress. In the case of the FCC it was done in 1934 to make the FCC come
into being.
Your ACTUAL criminal charge would be something like "Violation of the Communications
act of 1934, Part 95, sub part blah blah."
The FCC is just being lenient. The cost of criminally charging you is high,
but don't tell em they can't when you get busted. They have done it to a
LOT of people, and the court has sent those found guilty<(99.9999999%)> to
jail or put em on probation with a federal felony on their record.

In short, you keyclowns are totally full of shit and obviously were out blowing
each other during 6th grade government class. That is, if you stupid asses
even made it to the 6th grade.

>>take the FCC to the courts to either have them remove the fine or
>>reduce it. Yes you can be fined, but you are not guilty, because
>>you are never in any court, so "laws" never come into play.

hey Landcarp,
You believe that shit? Are you nuts? Congress passed the communications act
of 1934, the supreme court has upheld the constitutionality of that creation,
and the establishment of the regulatory body that controls enforcement of
the act, the FCC.

THINK LANDCARP THINK!

You and others of your keyclown kind are POLLUTERS. You dump dirty and spectrally
ugly RF out of the shit you call radios. you do it on illegal frequencies.
Same shit as an industrial polluter pouring chemicals into a river. Your
radios and amps are the "chemicals", the frequencies you use are the "river".
The frequencies you use, like the river, are not set aside for people to
pollute. Thats why we have the CB band in this case. Read that "Toxic waste
disposal site".

THINK LANCARP THINK!

RF POLLUTION CAN BE AS BAD AS WATER POLLUTION.
Look, The EPA is charged with handling the environmental problems in this
country. They are ALSO a congressionally created enforcement agency, just
like the FCC.
THEY bust people all the time with "regulations". Regulations in the EPA
and the FCC's case are just sub-parts to a Public LAW that was voted on by
Congress. In the case of the FCC it was done in 1934 to make the FCC come
into being.
Your ACTUAL criminal charge would be something like "Violation of the Communications
act of 1934, Part 95, sub part blah blah."
The FCC is just being lenient. The cost of criminally charging you is high,
but don't tell em they can't when you get busted. They have done it to a
LOT of people, and the court has sent those found guilty<(99.9999999%)> to
jail or put em on probation with a federal felony on their record.

In short, you keyclowns are totally full of shit and obviously were out blowing
each other during 6th grade government class. That is, if you stupid asses
even made it to the 6th grade.

291. Respect For Freebanders, what the fuck for when they are as RETARDED as Landcarp!

Credibility...lies...lol...

twistiegayboy, yer at it again. HAHAHAHAH...
None of us give a shit if you find us credible. In fact, that makes it all the better when you do not. Then, you use MORE bandwidth to rant about it. How stupid can you get? The answer is "Apparently more and more every day."

AntiKeyclowns WANT you to call us names, call us liars, call us not credible. You are waltzing right into the ambush every time you do it. It is great to hear your twatlike whining and accusations. Keep posting.

Twistiegayboy's image of himself: "I am the saviour of the news group. My superior mind will enable me to save the NG from the mean hammies, who are trying to run over it. I must post more spam, forges, and mentally unstable, goofy assed accusations so that the AntiKeyclowns quake in fear at my might. If I don't, the message about our criminality might get out. I am the only thing that stands between the mean hammies and the ILLEGAL FAGGOT KEYCLOWNS, and I must continue to fight them. It's a lonely job, being so right and great like me, but someone has to save the newsgroup by posting MORE senseless bandwidth. I can't let anyone else do it, cuz my molestin', animal torturin' ass would have to face the REALITY of my life if I wasn't occupied with this noble task. Thank God there are convicted criminals like me here to fight for the right to be Federal Felons."

Credibility...lies...lol...

twistiegayboy, yer at it again. HAHAHAHAH...
None of us give a shit if you find us credible. In fact, that makes it all the better when you do not. Then, you use MORE bandwidth to rant about it. How stupid can you get? The answer is "Apparently more and more every day."

AntiKeyclowns WANT you to call us names, call us liars, call us not credible. You are waltzing right into the ambush every time you do it. It is great to hear your twatlike whining and accusations. Keep posting.

Twistiegayboy's image of himself: "I am the saviour of the news group. My superior mind will enable me to save the NG from the mean hammies, who are trying to run over it. I must post more spam, forges, and mentally unstable, goofy assed accusations so that the AntiKeyclowns quake in fear at my might. If I don't, the message about our criminality might get out. I am the only thing that stands between the mean hammies and the ILLEGAL FAGGOT KEYCLOWNS, and I must continue to fight them. It's a lonely job, being so right and great like me, but someone has to save the newsgroup by posting MORE senseless bandwidth. I can't let anyone else do it, cuz my molestin', animal torturin' ass would have to face the REALITY of my life if I wasn't occupied with this noble task. Thank God there are convicted criminals like me here to fight for the right to be Federal Felons."

>Like old cowboys, CB radios may be riding off into the sunset of American
>lore, but they still have die-hard fans,

Illegal fans. And yep they sure do die hard.

>serve a commercial purpose

Commercial? No they're just used to keep truckers amused on long hauls.
For business they use cell phones.

>and
>offer a link
>to the romance of the road.

Yes, truckers often use CB to find hookers!

> For the general puplic, CBs have largely been muscled aside by cell phones
>and cyber-chat. But truckers still use CBs to gab and spread the word about
>speed traps.

If they want a laugh, yeah.

> And from time to time, the little black CB receivers still crackle with
>chat on non-trucker channels, too.

Like ham frequencies, goverment frequencies and the like.

> That's music to the ears of folks like Jesse Thompson of Milford, Conn.,
>who recalls when CBs were a way to stay in touch and call for help in an
>emergency.

Them days are long gone Jesse.

> ''I had a CB radio, and I actually used it to call the police once because
>I saw a liquor store being robbed," said Thompson, who is now 36 and hasn't
>seen or heard a CB radio since the 1980s.

What he has failed to mention was that he was robbing it!

>"CB" stands for citizens band.

Or "Criminal Band'!

>It's a slice of the public airwaves
>available for anyone with the proper equipment.

Sure, unless the high power linear guys are attempting to talk "over" each
other at the moment. Then no one can use it.

> But CB radios are a uniquely outdated way of communication, said Rebecka
>Torn, Ontario Trucking Association spokesperson. While there are no
>statistics on how many cell phones and satellite systems are now installed
>in North American trucks, explains Torn, there is a special allure to the
>gadgets that helped create the telecom craze.
> CBs appealed to the long-standing tradition of freewheeling rogues
>fighting the good fight against corrupt authorities.

No, the CBers were the rogues and criminals trying to avoid arrest for driving at unsafe speeds.

>It was the stuff of
>movies, like Smokey and the Bandit and Convoy, and the television shows
like
>B.J.and the Bear--- all of which featured truckers who used CBs to
>outmanoeuvre the police.

Oh I get it. THAT's why CBers make natural criminals.

>''Ninety-nine percent of all truck drivers have CB radios," said a radio
>repair technician, who like many truckers prefers to go by his CB handle,
or
>nickname,Raccoon. " I've bulled with other truck drivers for 400 miles,"
>said a 49-year-old Texan trucker, who calls himself Lion Tamer.

He probably blew a few of these guys, too.

> "Sometimes,
>even a state trooper will get on there and bull with me.
>they can be friendly."

See how friendly they are when they start to hear you bleed over their cop radios.

Well, just take a look at Bill Clinton ....

>Let me ask you this then, if you were around during prohibition (were you?),
>would you have disrespected bootleggers and consumers of alcoholic beverages
>up until the very point where the 18th amendment was repealed?

Probably not. However I do respect the values of H.D.T. At least he
broke the law for much better reasons than to get drunk or to make an
easy buck.

>Good thing all those amendments came along abolishing slavery and granting
>women the right to vote or you still wouldn't have respect for women or
>Negroes.

You are way off base, here. Many people gave their lives in order to
abolish slavery, and many of those that died weren't slaves. The right
for women to vote wasn't granted because the government gave up
chasing women out of the toll booths. These examples don't even
compare to the actions of most radio pirates. There are right ways and
wrong ways to change the law, but radio pirates don't even try.

In fact, freebanders do NOTHING to try and change the law except to
whine about the FCC. I haven't seen anyone in rec.radio.cb, or
anywhere else for that matter, make even a half-assed effort to try
and change the laws regarding CB radio. That's because the collective
mentality for freebanders is to "do what you want and fuck the law, at
least until you get caught." They, like most criminals, want something
for nothing at the expense of others. I'm sorry, Bob, but that just
isn't an attitude that deserves ANY respect.

laws
> that your local, state and federal government imposes on them?

It's a simple law that you choose to disobey, you obviously think yourself grandiose enough to decide which law should be followed and which shouldn't. If you choose to disobey those laws what about others?

>
> Let me ask you this then, if you were around during prohibition (were
you?),
> would you have disrespected bootleggers and consumers of alcoholic
beverages
> up until the very point where the 18th amendment was repealed?

You are getting the idea ... why respect criminals ??? I'm pretty sure you don't go to local penn's to drop off stuff for the criminals inside (as you would call them ... "good buddy")

> Good thing all those amendments came along abolishing slavery and granting
> women the right to vote or you still wouldn't have respect for women or
> Negroes.

If a law is wrong lobby to change it ... don't sit back in your homes breaking it every chance you get ... and please don't ever compare yourself to women and african americans of back then ... you are not oppressed.

The test is a joke ... I did mine when I was 11 with a grand total of about 2 weeks of studying for it (on my own I might add) ... its 100 questions multiple choice (up here anyways) and is general knowledge any operator should know.

The only thing stopping you from operating legally on the ham bands is your ignorance and your spite for rules and regs.

because we are smart enough to realize if the freeband is legalized it would become useless just like the regular 40 do to the large amounts of people able to be on those freqs and not to to large power like people assume. have you thought that we like it this way? it keeps the numbers down to a rational limit. if the freeband was legal then we'd move to 25 megs.....

the only thing keeping us from being hams is the simple fact we do not want to be hams. the test or code has nothing to do with it. as ive said many times before that i was banging away at cw when i was 12 and the theory test have never been a problem because i ave a good memory and could just memorize naything i didnt already know. myself as a young person find it totally uninteresting to speak with the hams which are mostly over 65 years old.

THANKS JAY!!!!!!! A few questions below if ya don't mind..

> I don't know your 5/8 wavelength ground plane dimensions, but hear are
> some suggestions.
>
> Vertical element length, 256 to 260 inches, for 27.205 MHz, which is
> channel 20, the ball park close center of the CB Band. Add on a Top-Hat
> assembly. This makes the antenna look longer that what it really is, so
> the impedance matching length circuit is made less to deal with. Use
> coat hangers, welding rod, or 1/8" aluminum solid rod, in a 10 inches
> from the center of the top vertical element, made up to be a cross, with
> equal 10 inch lengths hanging over the antenna, that are connected to
> the antennas top element, in a horizontal plane. The Top-Hat will also
> significantly reduce atmospheric noise.

Within a couple minutes of reading this, I was chopping up coathangers.. One question - would putting the top-hat a few feet down from the top be a bad idea? I'm using a steel whip at the top, so it's not holding that much weight up very straight.

> Horizontal elements length 103 to 105 inches long. You can play with the
> lengths a little bit here. You will notice that the ground plane radials
> length will change the antenna SWR, and bandwidth.

I'll put the extensions back on.

> Get a MFJ 259B antenna analyzer, and make SWR vs Frequency Charts, just
> simple charts with a SWR of 3 to 1 scaling down to 1 to 1, with a
> frequency spread of say 3 MHz. Document your findings, with the antennas
> construction details written on the back of the SWR charts, and you will
> be amazed as what you will learn.

Yep.. That's the next thing on my stuff-to-get list.

> The Vertical Element, that appears to have black electrical tape, to
> insulate it from the base assembly, adds way to much unwanted stray
> capacitance which will send a significant amount of your signal to
> ground, TILT! Use a solid piece of wooden or fiberglass rod to elevate
> the main vertical element above the base assembly, by 2 to 3 inches.

I'm busted! Yeah, that's electrical tape all right.. I couldn't figure why the field strength was so low! I will probably use a thick wooden dowel and hose clamps to fix that up.

> The Impedance Matching coil, needs to be approx. 45 to 55 inches long,
> that can have the length adjusted, so that the antennas length, can
> easily be adjusted. Make a Trombone looking loop, horizontally, approx.
> 45 to 55 inches total length, that is in series with the coax and

> connection, make another loop to ground that is approx. 37 inches in
> total length, that is also adjustable in length.
>
> Adjust the longer loop, then the shorter loop for the lower SWR, you may
> half to readjust the loops a few times to get a 1 to 1 SWR.

OK, just so I'm sure.. Are the 2 sliding loops connected to each other like
a really narrow adjustable V5/8 coil, or are they separated from each other
with coax center to the top and shield to the bottom?

> When the antenna is working like it should, different lengths in the
> mast will not change the SWR.
>
> Install the antenna up as high as you safely can.

He's never going to get the sorry excuse

"Awww..cap your jealousy you poor, whiney baby."

for an article at the address above to
disappear

"Why would I want it to disappear? It would be sorry to toot your own horn, but you girls have tooted it for me. I guess a "thank you" would be in order, especially from the publisher. Subscription rates have rolled in since you plugged my article, and are still coming, All you did was create a larger demand for the rag and myself. Are you still upset Leann, that all the hammies know you are a troublemaker? Is that why you can no longer cotrol your sething rage and envy?"

no matter how much he regrets having written it. His past is catching up with him.

"I'm damn proud of my past. You, on the otherhand, have so many hammies hating your yellow tail, it is no wonder you frequent the cb room like you do. Even the hammies will have nothing to do with you and know you well, and they have known you alot longer than I have been making you out the fool. Oh, and Sparks, too."

What's even funnier is he bad mouths Hams on this news group,

"What's funny is your lies. You have not one allie on this entire group. Or on the hammie groups. Sparks and DOgie...hahahahahahha! No one else."

but the editor of the on line zine he wrote the article for is a Ham himself, Keith Herzig

"Wow. Only took you four months to figure that out? (Chuckle) Keith has been watching you since you pulled down your dress and embarrassed yourself."'

(KC5LPQ). Hummm. I wonder what Keith has to say about him?

"Classic Busybody Leland and Sparks. Big 'ol beak always worried about what others think. Acceptance problem stemming from the self-hatred thing."

Source record: 80727

It isn't illegal to modify a 2510. BUT it is illegal to use a modified 2510 for CB. Read Part 95 Rule 9 (95.409)

Barry is correct. Many, if not most, ham operators own and use equipment that can be used illegally out of band or can produce excess power. I have a modified broadcast-band transmitter that I use on 160 meters. It will produce 5kw but it's perfectly legal for me to use as long as I don't violate emission standards. My Yaesu FT-890 will transmit from 1.5MHz to 29.999Mhz (continuous) because I use it for a 6-meter transverter. I feed it 26-30MHz and 50-54MHz comes out. It is capable of illegal operation but it is perfectly legal for me to use within the ham bands. Yes my modification voided FCC certification but ham operators don't have to use FCC certified equipment. CB operators are required to use FCC certified equipment to a modified 2510 is illegal to use on CB, even for a ham operator.

I have never received a speeding or any other traffic infraction. I have never received a warning. I never speed. I always use my turn signals/mirrors/shoulder check when turning and changing lanes. There is no need to. I always give myself ample time to get anywhere. I have never received a parking ticket either. Speeding is stupid AND illegal.

What an amazing group. Cb'ers vs Hams. Adults acting
like children flaming each other, forming ficticious groups
to supposedly put an end to freebanding, amps and any
other cause or person they don't like. Even taking the time
to build web pages accusing each other of being queer.
Then there is Dave and Debby. Peddlers of religious goods
via the web and supposedly in the CB Business. Obviously
just plain NUTS. Everyone they don't agree with is a commie.
Absolutely amazing. Just the kind of fruitcake the normal
people want to deal with. Probably have the basement stocked
full of k-rations waiting for the commies to take over.
N8WWM. Another asshole and alter-ego of many other
personas. Hates anybody that nails him for being a fat
hog jowled gay boy.
Then....The subject of I can do anything and never get caught.
Well boys, there are a couple individuals that frequent the group
that have shot that theory all to hell. Hmmmm. what ever happened
to the infamous "Aaron H. Voobner"? Amazing how fast he
disappeared when someone dropped a dime on him.
Another one that gets me is....if I am mobile doing wrong shit
they can't find me. Yea right. The FCC has a piece of test gear
that can pinpoint your signal in 3 seconds to within 12 ft in any
location. You can thank the US Coast Guard for that little
device.
Anyway.....It amazes me why any ham operator would care
where the cb'ers operate because the cb'ers obviously don't
care what the hammers do. Ever listen to 555 at night and
hear the stupid hams forget themselves and id? Loosers.
Get a life. It would be nice to see this group get back to
what it used to be. In the meantime, I wish all you loosers
that this offends a hearty "Fuck You" and have a nice day.
Mr. Know-it-all

Excuses, excuses, excuses Tim because that is all pirate operators like you can ever offer. The vintage of the story, nor the possible use of other frequencies, are not the point. The people who were on the frequencies in question, doing the rescue work, had the right to be there. The Freeband did not. There is no other point to debate. Show me JUST ONE TINY BIT OF A FCC REGULATION that authorized the Freebander to be where he was.

There are more young people that you think on the Ham bands first of all, and the average age is not 65. Second I doubt you could pass a Ham exam anyway. And finally I can see why you don't bother to get a license, you bootleg on the Ham bands anyway, and you just haven't gotten caught yet.

Well it certainly is hard to find people with the courage of their own convictions today. The way I figure it, those laws are there for a reason. Who am I to contest them or break them. The way I look at it is a criminal is a criminal regardless of his crime. I can't stand criminals of any sort, so, why would I lump myself in the same group as them? As for speeding is concerned, I don't see a point to it. The farthest I go on a daily basis is 110kms. Speed limit's 80kmh ... if I tossed on say 15kmh to that (2 points off my licence if I get caught too) it will take me 1hr 9mins, if I do the speed limit it will take 1hr 23mins. 14 extra minutes is no big deal with me. And is certainly not worth the trouble if I get caught.

As for the signals and such, using them is very important, kind of a good idea to keep the other drivers on the road informed of my intentions.

there is aproximately 1 million illegal cb'ers in the usa and probably just a few hundred fcc employees. the power of the people and a united front in disobeying a law that we feel has no basis for being gives us the right. its cival disobediance and you nor the fcc can stop it. people will always freeband and run amps here in the united states. the fcc can not be everywhere all the time and even if it was able to be cut out here in the usa then operations like the one you cited would still be severly bothered by people in other countries using these freqs. bottom line is we dont give a shit about the fcc rule and regulations because we do not agree with them. if the founders of this country would have just went along with the laws they didnt agree with then we would all be talking like britts. there is nobody in this newsgroup that has lived there whole life without breaking some laws. remember when the speed limit was 55? the reason it got raised is because the people just started ignoring it all at once and they couldnt stop them.

I don't know about that. I have been driving on the Los Angeles area freeways and city streets for 32 years and I have never received a traffic ticket either. I don't think this is as rare as you think - I know of several other people who have also never been cited for a moving violation.

I have, however, received a parking ticket from a city that did not allow overnight street parking in residential neighborhoods, and "forgot" to post any warning signs. A new twist on the old "speed traps" ? :>)

Anyway, I challenged the citation on the basis of 1) the violation was not done intentionally, and 2) the violation was a direct result of the city's failure to post adequate signage informing the public of the ordinance. The judge concurred and dismissed the citation.

Well, this should prove to be an interesting thread! I am having doubts that is just hams and CBers. Really. Seems everyone has their panties in a knot today. About a month ago, I was sitting behind a guy waiting for a traffic light. An express way exit joins a street and both stop at aforementioned traffic light. I saw the whole thing comming. Nothing I could do. A car is comming up the ramp from the expressway, another car down the street behind me. Of course, numbnutz exiting the expressway HAD to get ahead of the car on the street. Sure. Screeeeeechhhh ... bang! The idiot hit me in the rear, with his car at 45 degrees blocking both lanes. Fortunately, my bumper just got a dab of paint off of his fancy fiberglass hood. He had a hole punched into his hood. Two days ago, returning from work, I watched a panel truck comming up a ramp to join another ramp going on to the expressway. BIG yield sign for the panel truck. Heck, he wasn't gonna wait for a slow moving vehicle! He literally forced the other vehicle (which had the right of way) off the road so he could be first. I hope the driver of that panel truck realized the school bus he forced off the road had kids on board. I doubt he cared. Quite frankly, the flames are disturbing, but some of the antics on the air - both by CBers and hams and freebanders might, just might, make the FCC decide one day that there are better use of the airwaves. And everyone will lose. Don't hold your breath waiting for the flames to subside, however; it just seems to go on and on.

Spitting used to be illegal here too ... not anymore since hte amalgamation. But, cursing in public still is so I curb my toungue. See the biggest thing ya have to understand about why people detest murders so much is not because someone is dead but because they have tossed off what we believe to be right for their purposes. So in that case what difference does it make if how ya did it was by killing someone or spitting on the sidewalk ?

Murder is wrong depending on its context in our society ... self defence is not wrong ... in many countries execution isn't wrong ... only reason walking up to someone on the street and killing them is illegal is because we say so .. .because we put a law to it ... same goes for the spitting on the sidewalk analogy.

Nobody asked you about a right Tim, and the front is not united. As always nothing but excuses. Where's the beef? Where's the FCC regulation I asked you to provide? I asked you a simple question, and all you can offer up is some mumbo jumbo about mob rule. If the law is unjust then there are legal ways to change it. So what have you done in the legal way to change it? Oh, I forgot, you said in another post that you like it the way it is because it keeps the riff-raff of CB off the freeband. You speak with a forked tongue Tim.

The vast majority of speeders don't purchase and install special
equipment (linear amps) and modify their rigs (frequency mods) with
the sole intention of breaking the law.

No their equipment (cars) are capable of breaking laws without any
modification at all.

470. Respect For Freebanders II

Newsgroup: rec.radio.cb
Date: 2001-05-04 20:36:27 UTC
From: anony mous <anony@mous.net>
Message-ID: <tf64hq9jj9s91a@corp.supernews.com>
Source record: 80822

My first base station radio was a Robyn 520D, bought new in November of 1977. It had the "extra" channels (above channel 40) installed from new. We didn't call operating above the standard forty channels freebanding in those days. It was no big thing, but it was something I was always hesitant to use. There was a real FCC in those days and the FCC had real teeth, with no inhibitions concerning using them.

Lately someone has posted an article titled "Respect for Freebanders" on many newsgroups simultaneously. An obvious troll, but one which has generated a lot of comments. Including this one.

Why would anyone respect a freebander? They did nothing to obtain their operating privileges. You don't have to be technically astute to turn a radio on that comes premodified. You certainly don't have to have any particular talent to speak into a microphone. Turn on any radio, even commercial broadcast radio, and you can find this fact amply demonstrated.

Instead of respect, perhaps what the original poster was alluding to was acceptance. But why would anyone, other than another freebander, worry about being accepted by any other group? It makes no sense at all.

Rimshot

My point exactly. 'Freebanding' is a deliberate act, carefully planned and executed. But just for the sake of argument, suppose you live on a street where the speed limit is posted at 4mph. How long until you get fed up with people cruising past your house at 1000mph? More realistically, your street is probably 25mph, and that would clock those speeders at 6250MPH!!!! Not just that, but these speeders hold drag races, don't use any mufflers, and drive off-road right through private property. When these speeders are caught, the fines are typically more than ten times that of speeders on the highway. So how do you compare radio pirates to speeding?

>Rob St.Denis

BTW, any relation to Bill St.Denis in Spokane?

Ah, none of the shit bothers me anymore... I have got like 4 filters on the newsgroup, and it takes care of 98% of the bull shit... Go figure.. It said I had 136 new messages in here... After I opened up the group, and it got done filtering, there was a whopping 44 messages left for me to look at... And none of it was a bunch of name calling, I'm better then you, your illegal, your mother does you up the ass with a strap-on type shit... Oh it's nice! :) The newsgroup has become sane again...

They both willfully break the law. They both know that they did it (although ignorance is no excuse), heck "freebanders" have a term for their crime, "freebanding". They use a portion of the spectra reserved for other services, which in turn can lead to prolonging those services and in the case of millitary and SAR that could mean someones life the same as doing +20% on the high way makes you more of a danger to other drivers.

> BTW, any relation to Bill St.Denis in Spokane?

The difference is that when you run a kilowatt amp, you do it with the
sole intent of breaking the law -- you purchased the amp in order to
break the law and nothing else. Not true with a car, unless your car
can only operate above the speed limit.

Your 'rational limit' keeps getting larger each year -- more power,
more freqs, more interference and more intrusion on legal bands. It
seems, in all your self-praised intelligence, you don't realize that
your 'rational limit' will someday reach a threshold where it will no
longer be tolerated by the FCC. So please keep thinking that you are
'smart enough' to abide by your own limitations.

Do you agree with the laws against robbery? Arson? Rape? Murder? Just
because someone doesn't agree with a law that doesn't give them the
right to break it. "Sure, judge, I'm not guilty because I knew what
the law says but I ignored it because I don't agree with it."

> if the founders of this country
>would have just went along with the laws they didnt agree with then we would
>all be talking like britts. there is nobody in this newsgroup that has lived
>there whole life without breaking some laws. remember when the speed limit was
>55? the reason it got raised is because the people just started ignoring it all
>at once and they couldnt stop them.

The reason for the 55mph limit was to limit fuel consumption during
the energy crisis in the mid 70's. The limit was raised mainly because
of lobbying by the teamsters. As for the founders of this country (the
U.S.) people fought and died for what they believed, and that doesn't
even compare to radio pirates.

You don't have a single legitimate argument to support illegal
operation. You are a pirate because 1) you are too lazy to get a
license 2) you want something for nothing, and 3) you are willing to
steal the rights of others to satisfy your criminal urges.

Hello dB Dude:

Ok sounds like your gun hoe here good deal. Not to bad mouth your antenna construction, but to understand that this is a first time homebrew and built antenna. And be advised this assembly is not real easy to construct. So the more backyard and shade tree engineering here, the better, yee hawwww!

The point I need to make here is that your antenna ain't going to the Paris Air Show for being new and shinney. But you can learn a bunch here, while having a "Beverly Hills Hillbilly" looking antenna that kicks everyones ass, Yeah. That is easly modifiedable, and will not dent the national debt if lightening strikes it.

Ok I hear what your saying here. You want the Top-Hat on top of the antennas main vertical element. There are 5/8 wavelength antennas that where made by Hustler that had a Capacitance hat about 9 feet from the

ground plane radials, that was used as a impedance matching device. I disagree with this type of impedance matching methode and do not understand it. So lets stay with what we know works.

The stainless steel whip antenna is made for mobile use, and not a vertical element to be used as top of a 5/8 wavelength antenna. You can tape 1/2" or 5/8" diameter by 3 feet long wooden dowls, to the SS whip to stiffen it up, but this is a mickey mouse way of doing things, but would allow you to see the results of a Top-Hat on the antenna top. The Top-Hat must also make good electrical connection to the top of the vertical element. Most Coat Hangers, have a protective coating that can be easly scraped or sander off, and even soldered together.

It is advisable to replace the whip with aluminun tubing. There probably is a metal supply house near your location, that would have aluminum tubing in stock, or what is called "Rims", leftovers that you could piece together.

Don't forget to write down the antennas dimenisons, and accurate discription. I have taken SWR measurements and plotted them on a chart, to only half to redo it later, because I didn't write down the antennas dimensions.

Always use a short piece of coax, like 50 feet of LMR400 or RG-213 so you will get a feel for the antenas with the same length of coax. Make s for accurate bandwidth & SWR measurements.

Yes elevate the main vertical element above the base assembly, this took
a while to figure this out. Don't use PVC Plastic pipe.

> > The Impedance Matching coil, needs to be approx. 45 to 55 inches long,

Good question. Yes the 2 sliding hoops are connected together.

Yes again, like a really narrow adjustable V5/8 coil, but there are two
length adjustements on this one, instead of the V5/8 single adjustement.
I can e-mail you a hand drawn diagram, as how its done. Will cost you a
few beers if I ever slid on over to your place.

The V5/8 impedance matching coil, values are also based on the V 5/8
main vertical element, placed into the base assembly that has the usual
"lossy" high amount of stray capacitance that is a significant amount of
signal loss! The V 5/8 antennas have been bad mouthed for not being able
to be tuned to a 1 to 1 SWR, on the bands its advertised for. With the
double Trombone impedance matching device, you can adjust the antenna to
a 1 to 1 SWR where you want it to. I have modified the MaCo V 5/8 with
this type of matching device and it works great.

Good grief...

487. Twisted Read This

Newsgroup: rec.radio.cb
Date: 2001-05-04 22:29:39 UTC
From: "Leland C. Scott" <no-spam@junk-mail.net>
Message-ID: <n3GI6.35081$qD1.647430@typhoon.mw.mediaone.net>
Source record: 80836

You're a sorry excuse Twisted for someone who fakes the ability of a professional with "expert knowledge" in the area of reading news group headers, and alleging that various posts are forgeries but from the wrong people. You have demonstrated your ineptitude in this area beyond a shadow of a doubt by the shear volume of "Twisted" and meaning less boasts as to whom, in your "Twisted" minds eye, is the party responsible. As a matter of fact you are yourself guilty as original sin for posting forged messages to various news groups, using other peoples screen names, while claiming you did no such thing. It's time for you to acknowledge your wrongful deeds, and make amends for your sins.

It's a fact that you have forged posts in various news groups. I'm very sure that other innocence victims of your agenda of "Twisted" vengeance will agree with this point. How many do you think would like to come forward just to see you get a sample of your own "Twisted" sense of justice? It's also a known fact you can't read a new group header to save your life. A few mistakes are excusable, but you went well past that point long ago with your perverted and "Twisted" holy crusade of proclaiming conspiracies everywhere. It was even pointed out to you countless times, by some of your now former compatriots, how your "Twisted" logic and ignorance betrayed you. You didn't listen to them, but instead you claimed they were a part of the vast and imaginary conspiracy against you.

Now lets move on to the issue of your forged posts shall we? I'm sure you know the ones I'm speaking about. Do the numbers 248 ring a bell, like in Ma Bell? A simple little search using my screen name is all that is required to dig up the posts. Hummm. There seems to a lot of them, well we can narrow it down a bit by looking for the magic numbers above. As a matter of fact, we can simplify the search by ignoring anything proceeding or following this date (4/8/01) by a few weeks. Now you're wondering why that date? Well it just so happens it's the date you sent me, by private E-mail, a couple of rather vile hate filled messages, using your typical vulgar "Twisted" prose, which outlined your motivation for making the forged posts. Did you send similar messages to others? I have included a copy of those E-mails below just so there is no doubt I'm not making it up. It was also at this time your insanity took control, and you proceeded to vomit forth your hate in a deluge of "Twisted" incoherent postings on this news group. Your distinctive "Twisted" writing style can't be denied, and the "Twisted" motivation for the forged posts you made in my name is most evident. Now what do you think we are going to find when the headers are examined? It's looks bad for you Twisted, with a "WebTV.net" domain in there. You're worse than those whom you point your "Twisted" finger towards. Then to compound your own "Twisted" memory, about the material you wrote for an on-line magazine, you even try to deny your own "Twisted" thoughts on the subjects. You can't even remember your own "Twisted" prose, much less your lies anymore.

Your CB compatriots on this news group have deserted you, Hams like myself despise you, and others that visit this news group think of you, and your "Twisted" incoherent prose, as nothing more than a circus act side show, only good for a few laughs. If it's not some group pulling your strings, where upon you perform right on cue with gusto, or others tripping you up on your "Twisted" lies, all with the entertainment at your expense never stops. The only thing remaining for your last performance is to make that short eight-foot drop through the trap door, because you have really reached the end of your rope, and make that final "Twisted" half turn to the right. It's the only right thing left for you to do, and you earned it too.

Now the contents of the E-mails which explains Twisted's campain of vengeance :

>"MY turn CHICKENHAWK! The best part was setting up your impotent, cancer
>ridden carcass for the fall. You were too stupid to realize you were
>dealing with someone way over your minute intellect capabilities. I
>handed you the sword, and you stuck it in your fat, ugly, smelly ass.
>You are fucked LELAND, all because of me, I reduced you to absolute
>nothing. Now I am going to watch you squirm with a subpoena for
>copyright INFRINGEMENT, bitch-of-mine. Wait. It gets better. That will
>posted as well. What really sucks, is everytime someone pulls what you
>did, YOU get the blame, Bwaahahahahaahahah! I will make certain of it.
>Fuck yourself somemore, cheesebrain! AHAHAHAHA! Bitch!!!!!!!!"

And the second E-mail contents:

>"Thought I was an asshole with a webtv terminal, eh wise guy? Don't fuck
>with a JOURNALIST asshole. It's our job to find shit out. You thought
>webtv was all I had? BWAAAHAHAHAHAHAHA! Merry Christmas, ASSHOLE!"

Note the references to "JOURNALIST" and "copyright INFRINGEMENT" in the two messages above, which fits with the freebanding article he wrote. The URL for that is - http://sporadic1.tripod.com/page7.html. Twisted's writing style is as good as a finger print.

Twisted's plan was to post in various news groups items for sale, and even included my phone number. Since I use my real name and call sign, which he used on QRZ to get my address, then used both to call information to get my publicly listed phone number. His hope was to create a rash of harassing phone calls by people wanting to buy these items. Since I never have sold anything on the Internet to date I knew the calls were all his doing right away. Twisted never caused me a moment of problem since my standard policy with everyone is I screen all my calls. I don't know you I don't answer or I just hit the delete button. Just like I hit the delete button on the computer keyboard for other junk. Can't be bothered to leave a message I can't be bothered to call you back, simple, and works like a charm too.

Now the E-mail below here is where Twisted is being critical of the very same activity he has been engaging in on the news group for weeks now. Note "Everyone has a nemesis I guess, and it's all good to discuss, at times,

even argue, but the name calling, when it gets to threats and junk, well, it's just stupid." He should apply that to himself and save the news group from a lot of his hate postings. The same goes for his endless postings of news group headers which he seems to be the only one who "truly" knows who is who. It would also appear that Twisted admits to being basically technically ignorant about radios too.

>"HAhahahah! In all honesty, Leland, Tim has never said anything to me
>about you anywhere other than what has been said in group (damn, that
>sounded like we're in some type of therapy, hehe). Everyone has a
>nemesis I guess, and it's all good to discuss, at times, even argue, but
>the name calling, when it gets to threats and junk, well, it's just
>stupid. Oh, I'll send you the next email Dougie sends me. I might get a
>slew of them in a week, then none. The only way he can get into my email
>at all is to forge and fool the server into thinking it is coming from
>someone NOT on my block list. I recently redid my list because I had 67
>killfile names, the majority of them from Dougie. The one he sent forged
>from you just invited me anywhere near him in a 200 mile radius to "see
>the light" even if it had to be forced on me, and said that you (he) can
>pop in any time, watch my back, and that you (he) has forwarded all my
>posts (the forged ones) about drugs and amps to the DEA, FBI, and FCC.
>Oh yea, he also accused me of running an illegal cb mod shop and that
>you (he) tipped my local cops off. That was funny. I never opened a
>radio on my own until I stumbled on this group. Now, I can do simple
>soldering and wire a mic, but i ain't about turning up any pots. Hell, I
>don't think I could instalI a board unless I was spoon fed. But hey,
>this time 3 years ago, I didn't know that either. I wasn't half way
>through it when I KNEW it wasn't from you. I have never seen you address
>anyone in that manner (even Tim) so I knew before I even saw the
>headers. Anyways, thats the gist of it. Have a good weekend."

The E-mail contents below is what later convinced Twisted I was somehow forging his posts, or enabled others to do so. It would appear that more than just one person, myself, knew the "tricks" he mentioned. Note "The others that know, I know personally from shootouts and other fun misadventures". I was asked to keep a deal at the time, which I did. Perhaps some of these other people violated his trust. Only Twisted can tell us who these "others" are. Now after some weeks of his insane attitude and treatment I now feel the deal is off so there is no further point in my keeping the contents to myself. As a matter of fact some of you can use the information to do a bit of back tracking to untangle the web of forged posts if that's your thing.

>"Leland, Look carefully at the headers. I am going to go out on a limb
>here and tell you a secret, so if it gets out there, I know damn well
>and good it came from you. The others that know, I know personally from
>shootouts and other fun misadventures.. There are many ways some of us
>tell our own posts between each other. Since you claim to be a victim
>also, I will give you this tip, simply because Dougie is an asshole of
>the first degree. Most of us all do at least 2, sometimes 3 things in
>our posts that only those in the know can recogize..I have 3 things that

>are ALWAYS present in my posts. I will tell you one so that you can
>always tell if it is me or not. Look at the top of this page where I
>began this post, starting with your name. See the indentation? ALL,
>repeat, ALL of my posts have that. If it isn't there, it's phony. Go
>back and check Google, or Deja, oh I may have missed one or two, but I
>doubt it. They all have the little indentation on my posts. I also only
>sign my name ONCE, with no paranthesis or quotes or < >, but I have a
>feeling your browser does not display them, but they are all showing uo
>in the forged posts. Your forged one included. As you say, someone is
>hellbent on dividing the room and causing all kinds of shit, and it's
>Dougie. Olive branch thrown your way (for the time being anyway). Deal?"

So Twisted you did such a wonderful job of stomping on the so called "Olive
branch"
enjoy your fate. The deal is off now and so are the kid gloves.

I have a modified President Jackson SSB rig with a frequency coverage of
25.425 Mhz to 28.305 Mhz.
I would like to increase the bandwidth of my mobile antenna to cover this
range, is there any way to do this other than purchasing a matcher.

Regards,

Lancer.

I've got a 2001 Durango SLT+ 4X4 and I don't really want to put holes in my lower kick panels to mount a CB radio. I've been thinking about using velcro with adhesive backing to put the radio on the right side of the stearing wheel. Can anyone comment on this or suggest a better way to mount the radio? The transmition hump is covered with the center console and cup holders. Thanks!

As bandwidth and antenna efficiency do not go together the tuner is probably the best answer.
Some years ago it was not uncommon to see two whips on a bracket bolted to the spring. If one were cut to say 27.2 and the other to 26 or so the VSWR would be broader.

Just who do you plan to talk to? You can go into the 10 meter ham band in a section where only narrowband is legal so you will stand out like a sore thumb. The truckers will hate you unless you are one. Do you have some purpose or are you merely a dipstick with a toy?

Hello Lancer,

The AntiKeyClowns are going to try a new approach here. We will be kind, respectful and gentle. We will ask you what you plan to do above 28 Mhz. We wonder if you might tell us your plans for comms below 26 Mhz. We politely ask...

OH FUCK IT.

LISTEN, YOU FIRST CLASS ASSHOLE - GET YOUR ILLEGAL SHIT OFF THIS NEWSGROUP, YOU FAGGOTY ASS FREEBANDING BOOTLEGGING CUM SUCKING FUCKWAD. YOU WANNA BE A PIRATE? GO TO FUCKING REC.RADIO.PIRATE, ASSWIPE.

I don't care if you've ever had a parking or speeding ticket. But I care a LOT
if I find you on 10 meters.

As for the freq's between the CB band and 28.0, let those who are assigned
there defend their own turf.

OK, top-hat stays on top. Well, earlier today I was out there on it and I
whittled down a piece of wood dowel to fit in the mast and hold the vertical
above the base assembly, peeled off the no-good electrical tape from the
vertical and set it to the dowel with U-bolts. Then re-bent 2 of my copper
"attempt" coils into the trombone loops and hose-clamped it all together.
(at that point I was betting that you would say the 2 loops should be
insulated from each other.. Oops..) I got it all up there and went to check
the field strength - About twice what I was seeing before! I would have
yelled out JAY RULES!! but the neighbors were already looking at me funny up
there on the shed grinning and holding the meter up. That capacitance loss
you are talking about is no joke! The SWR was easy to get very close to 1:1.
I will be slide-connecting the 2 loops next time I get out there and I'll
try not to fall off the shed if the field strength goes up some more.

OK, thanks for the tip. I will be calling around about that. I would really like to have all the elements made of aluminum instead of mixed metals that will end up corroding each other by contact.

I hate to admit this in public but I'm using about 50 feet of crap-grade RG-58/u. I already have 8/x coax on order though.

To be honest I had to recover the message body from an E-mail to Twisted. I just could not believe what he wrote! I use two computers, one at my work QTH and the other at home on a cable modem. If anybody checks they will notice the difference. The key is the posting time. Unless I work late, very rarely, the mediaone posts all occur after 5 PM my time which is EDT. At any rate the header from what I remember is like the one below recovered from another one of his messages. The message arrived on my work QTH computer which I have to clean the messages off from time to time. I will have to check further to see if I can recover the original complete message but I think you would agree from the writing style down to the exact choice of words it has Twisted stamped all over it.

Jeez, almost a complete personality change, from a benign, informative stance to a bitter, vindictive puppy-beater. Kind of like what you are doing on this ng, eh twistie?

>27.555 has long been an international world wide contact frequency.

For how long, and for whom? Facts? Sources? Quotes?

>Standard protocol has always dictated one makes a contact and QSY's to
>another frequency for their conversation, thus leaving the call
>frequency open at all times for contacts.

Who dictated this protocol? Or do you mean "stadard practice"? Facts? Sources? Quotes?

> This small but nefarious
>group is attempting to jam, interfere, and prevent any DX contacts
>from being made on frequency.

... as opposed to 'off-frequency'? How do you know it is a group, and how do you know it is small? How many are in the group? Facts? Sources? Quotes?

> In case you haven't listened in on 555
>as of late, the frequency has literally become a key down fest with
>language that one would be embarrassed to hear in the company of
>children,

Are these the same children that read your profane and vulgar posts in
this ng?

> while only those blowing ridiculous amounts of power are
>being heard. Some incredibly rare and difficult DX contacts have
>effectively been nullified

... nullified? And where does the adverb go, twistie? In the middle of
the verb?

> because so many operators are choosing to
>fight fire with fire....in other words, many are pumping up their
>wattage rather than surrender the frequency.

Well, then they are breaking the rules. But then so is everyone on
that frequency, so your point is 'nullified'. And do you understand
the concept of 'tense'? How about 'surrendering'?

> While I can somewhat
>empathize with the operators who are attempting to defend this bit of
>DX space, especially the ones who are located outside of the U.S. and
>are permitted to transmit there,

That's right, twistie, and you aren't one of them.

>can say one thing with absolute certainty, the offending signals are
>coming from the southwest U.S.

How do you know this? What's the source of your certainty? And what
makes you think that they will not find you on another freq? Like you
said yourself, it's the free-band, and they have just as much 'right'
to it as you do -- none!

> Of all the DX and countries I have ever heard, I find myself
>embarrassed for our own operators here in the states.

You should be, just as you should be embarrassed about your own
behavior in this ng.

> The high profile
>spectrum splatterers usually get their clue, one way or another.

How do they get their 'clue', twistie? And just what is that 'clue'?

>Unfortunately, for many fine operators and listeners it doesn't come
>soon enough. Rather than retaliate with gobs of power, it is simply
>easier to find another frequency until the problem rights itself.

Agreed. So stop retaliating and find another ng, like alt.radio.pirate
or alt.pirate.radio.

>While some may continue to pull out the A/C mauls, this is actually
>compounding the problem. If no one would react to these types and
>totally ignore them they would long tire of talking to themselves. But
>I guess that is just the optimist in me.

No, that's just the hypocrite in you.

> The flames continue to be
>fanned, albeit not always intentionally, by ops who feel it is their
>right to "give back what is being doled out."

And that's just what you do here, twistie.

> There are no easy
>answers.

Nope, not when illegal operators start talking about 'rights'.

> As stated priorly,

Priorly? HAHAHA!!! Do you mean 'previously' or are you quoting your
mother superior?

> there are many other frequencies yielding great

> If you wish a reply, please provide a valid e-mail address.
> 3s from Keyholder's Korner
> Twistedhed@webtv.net

Leave one yourself.

So you think you are a journalist? You don't know a subject from a predicate from a prepositional phrase! You don't even understand half the words you purchased with that bounced check. All you do in your 'article' is whine about how illegal operators are screwing with other illegal operators, and that makes it nothing more than an opinion. You fail to cite and quote sources or facts, and state only your highly subjective conclusions. This isn't suprising because that's all you do on this ng.

Your paragraphs have no structure. Your points are not seperate, nor are they in any particular order. You almost have a draft for an introduction: it does grab the attention, but you jump right into your subjective whining, which tells the reader that your piece is filled with your opinions and conclusions, and you are not going to let the reader make up his/her own mind. But again, that's not a suprise, because again, that's just what you do in this ng.

The only fans you will get from writing this article are people that like to cry about the same thing you cry about. That's not journalism, and you are hardly a journalist. You are a delusional redneck radio pirate that is desperately searching for self-importance and social acceptance. Pack your bags, twistie, you ain't gonna find it here!

Hey, you guys might be interested in rec.radio.cb's premiere AUTHOR and JOURNALIST.
His name is twistedhed@webtv.net and he specializes in psuedo-literate rants
featuring whiny, opinionated drivel that attempt to defend BREAKING FEDERAL
LAW -- just like YOU GUYS do! The more we think about it, the more it seems
to be a "match made in heaven". You should try and grab this guy before The
NY Times scoops him up.

534. Re: Twisted thinks he's a journalist .... hahaha!

We have a feeling that the Vast, Far-Flung International Conspiracy Against Twistedhed will soon cause this (below) to be reposted in rec.radio.amateur.policy. (Unless of course it were to somehow find it's way there itself...)

Is there anyway I can run an antennae from my balcony into my bedroom and still keep the balcony door closed? Would this somehow be possible?

Wahooka

Hello Whooka:

Usually on external doors, theres a bottom weather strip that can be notched to allow a coax to fit into, and then filled back up with RTV Silicon, if you want to.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Miss Sandee at the fillin station has swap cooler accessories, shad nets, and water misters on sale. Price of gas is still pretty step.

Jay,
To late to find a room, however I heard last year
there was some ladies roaming the parking lot offering sleeping
arrangements CHEAP!here are some words of advice to you though slip it
on before you slip it in.
still have those blowers FS.

I plan to use it around the 26.1 frequency not 28.0. Even if I was a radio ham it would still be illegal to use the Jackson on 10M.
Anyway I came here to discuss bandwidth not legal/illegal usage.

Nothing illegal about using the Jackson on 10 although 28.305 is the only freq you have where SSB is legal. Takes 5wpm of code (suggest Morse Academy from http://ah0a.org) and the fairly trivial Tech written.

To get back to your original question, it appears you are asking for a 26.1-27.4 bandwidth within a 2:1 VSWR or about 5%. As noted, full-sized antennas will give you close to that so two of them on the same spring will do it at the risk of looking sort of dorky and creating strange creaking noises in the fender at speed.

Loading an antenna efficiently will reduce the bandwidth. It does, however, let the manufacturers play a little game that combines the features of a loaded antenna and a dummy load to give the illusion of decent performance. If the loading coil has a high resistance (low Q) it will be flatter across a larger bandwith. It will also explode if you put any appreciable power on it.

I am assuming mobile operation, there are several dirty tricks for home usage if you can hang some dipoles. If you do go the tuner route, take a look at some of the automatic tuners available at some stiff prices. At least when the spots are down and you do choose to go the legal route the investment won't be wasted.

Many thank for your post. Looks like I will have to invest in a antenna tuner after all.
As for going legal that's a different subject (never have been, never will be), of which I am sure has been discussed "ad nausea" on this NG.

Regards,

Lancer

Don't be so naive.

The purpose of the club is to communicate over the 150 mile limit. They
tolerate and even encourage freebanding by the use of weasel-worded disclaimers,
i.e. "AE admits no liability if its members choose to operate outside the
regualar 40".

I am planning on going, so are some others from my area, including some people from the local Civil Air Patrol, REACT, local ham club, and yes there are some great bars in the area, one of the guys traveling down with us is in that area 6+ times a year at the air force base so he is familiar with the area, we'll probably be staying at my cabin on St. Mary's lake. So if you run into a skinny guy wearing BDU's and a balding guy with short cropped hair in a REACT shirt that will be part of our group, and if my cousin is home on leave he'd like to volunteer to be the referee at the N8wwm/twistie or whoever wrestlemania (my cousin is a Navy Seal)

> regualar 40".

who's being naive? It just so happens I am a member of a local sideband club we call it the Lond Distance Operators, we aren;t trying to talk around the world, we try to talk to each other in minumum power on legal freq's and we do it within the legal range allowed by the FCC, one member lives 45 miles from me, we another lives 40 miles from him in another area, we practice radio net/emergency communications drills, we have a radio swap meet on the air, we invite other radio operators that are not members to join in, we are just a bunch of people that love to rachet jaw on the radio. In fact with our club rules, anyone that is found to be using illegal equiptment is kicked out of the club.

I run a LEGAL (no modifications whatsoever) uniden president washington base, I have 3 antennas, one set of PDLII beams in 49 ft tower, one antron99 on same tower and a 4 foot fiberglass whip mounted on the wall outside my radio room. Why do I have a mobile antenna ? Because I like to see what I can do with minimum setup/equiptment, kinda like the ham drills eh? Hell in my list of equiptment I even have a pedal power generator to power my radios. No amps, no radios that will run out of band, I have no desire to, and never have. And if I did try it? I'd get my butt busted in a hurry, this area is crawling with agents investigating some other radio operators, and to be frank I hope they nail them. Those jerks have almost caused lives to be lost bu interfering with EMS, Fire, and LEA radio communications, not to mention when I am working my shift monitoring channel 9 and I hear some fool cranking up 2kw splashing 10 channels in every direction yelling "AUUUUUUDIIOOOOOOO". Sure the radio is ment to be fun, and I say people can have alot of fun and still be legal.

But back to my point, You saying all of these people are bad because of a few, would be like my saying all ham operators are jerks and immature

because of the way a certain few have acted in here. I have alot of respect for amateurs, especially those that got their HF priviledges before the changes, it takes effort to study all the theeory and learn to copy/send code that fast. I know the theory, and hope someday to learn the code so when I do take the exam I can get it all taken care of at once.

United kingdom, CB didn't become legal until '81, due to the fact of UK truck drivers and people like me protesting to use our CB's legally. But in the end they begrudgingly gave us a frequency that was swamped by Italian SSB'er. Look at http://www.whitecliffsdx.freeserve.co.uk/freqs.htm to see the list. it also took them ten years to give us the EU frequency.

Which boys from NJ in particular do you refer to? Why are you waiting for them? How come you don't do it yourself? Are you afraid of N8? Are you unable to hold your own in a scuffle without help?

I would like to ask a question to amatuers in a cordial and polite manner. I have, in my car, a RCI 2950. I haave had it tuned, aligned, and scoped to eliminate as much as possible any bleed, it is not overmodulated, nothing has been clipped, but it has been converted to enable 11 meter. I have intentinally also had the output lowered to around 5 watts, and I have not transmitted outside the legal 40 channels. Why do I have this radio you may ask? I like to listen to 10 meters, scanning through it, enjoying some conversations I have heard. I have this radio converted because I talk on the legal 40 CB, and do not have room for a second radio and antenna. Now, I know and accept that this is illegal as far as non type accepted, but I wanted to ask, in all seriousness, how am I harming anyone by suing this radio setup in the manner that I am? Just something I wished to ask, and thanks for any courteous replies.

Elric

First say "baba boeey" several times. Break is old school and is outdated.
Another salutation is "Wassuuupppp" which is more "in"
Remember to address ALL truck drivers as "good buddy" they like that and
will talk to you more.
If you have a roger beep key up several times...20 or 30 times will be
sufficient.
Also remeber to give your radio a longevity test to see if its ok..Wrap a
rubber band around the mike key and leave the mic near a radio or tv...with
the tv infomercials work best and with a radio try to find a good polka
station. Make sure you do this on ch 19 since you'll use this allot. Test
should be run for 12 hrs min...then ask for feedback.
Sincerely,
Ken

I have a superstar 3900 HP with 6 bands (same as Galaxy88). I forget what
the freq range is but I was able to get a SWR of 2.6 on ch 1 Band A and 2.7
on ch 40 Band F which is 28.something.
The antenna was a radio model im not sure which on and rg-8 cable about 6
foot
Don't know if this helps

I doubt RF exposure would be a problem, assuming he is running REASONABLE power. Anyone running hundreds (or thousands) of watts would be ill advised having their antenna much below 40 feet or so (or located near dwellings) at 27 MHz. Certainly, to have the antenna that close to living quarters would seem to dictate low power. (Hey, cell phones put about 60 V/M at your head).

The AntiKeyClown Group is on a very busy schedule and we do not have time
to walk you through the various moral and civic issues that your post raises.
Suffice to say, we think your story has an odor of fish to it. If ham band
monitoring is your goal, inexpensive SW receivers the size of a paperback
book are available. But you knew that. And you also know that wanting to
listen to 10 meters is a lame excuse for owning an illegally modified RCI2950.

Me and a friend were talking truck to truck and we went to band "F" ch 19.
Both of us have 6 band radios I know it was 28.something
Anyway it was kinda crowded with other truckers! This bodes well for cb.
28mhz lacks the bandwith for the new wireless techs coming online that
the FCC is gonna make bucks on. The Hams can kiss 1.4 ghz goodbuy and the
Hambos have basically ceeded 28mhz to the good guys it seems.
The reason some Hams are going nuts are they know they are losing! Today
there is CB, High CB, Very High CB(28.xxxmhz) There afraid that when the VH
CB gets crowded we will take over the 6 meter band too.
Maybe Custer had the right idea...We take all the Hambos and herd them to
a Ham reservation like maybe Florida and give them ohhh lets say ch 1 and ch
40 from old CB. Thats all they really need anyway. The good guys only use 1
and 40 for SWR's anyway. And Florida is perfect since most Hams are over
80yrs old allot of them live in Fla already.
The FCC can just devide the spectrum into two parts. Above 900mhz can be
high tech like wireless LANS and WANS and cellular and below that it will be
FREEBANDING!!!!!!!!!!!!!!!!!!!!!!!!!!

Bullshit. CB was dreamed up along with splitting Business FM channels to relieve congestion among business users. It was assigned to garbage frequencies no one else wanted. At no time did outlawry have a blessed thing to do with it. Legal CB came into use 1 Sept 1958 so you missed it by a few years.

There are those who might not take you at your word and might object
strenuously; I am not among them. I will congratulate you on retaining your
virginity.

You might be surprised how genuinely easy it is to join the bunch in the
28.3-28.5 segment. The amateur community has a rep for difficult exams (and
a few dangling rhoids) that is totally undeserved. It does take a 5wpm code
test and will for at least five years plus a written that may well not keep
you awake. Even the next step is non-technical -- your drivers license on a
larger scale -- that lets the FCC fulfill its treaty obligations and take
you thru the ways to end up in the doo-doo.

Look it up for yourself:
http://www.arrl.org for orientation and books
http://www.qrz.com for sample exams
http://ah0a.org for Morse Academy. Read the directions.

Even tho this is a troll and/or wishful thinking, ain't gonna happen. I just returned from a hamfest and listened to Mr. Hollingsworth give a great talk about the future of Amateur Radio. I am not wishing to "start" something or extend the flames, but what you say is merely misinformed and bull****. The issue of bootleggers on 10 meters was discussed. The gist of the subject was that 10 meters WILL be defended, and, if you haven't been reading or paying attention to such outlets as www.rainreport.com, or the ARRL newsletter, you might start. FCC IS very interested in this matter, freely admits that its being AWOL from enforcement was a mistake. Mr. H promised that this is going to be rectified. From what I am reading and hearing, he has already been very active. Recently, a gent from around Pa. received a Notice of Apparent Liability (January). He ignored it, thinking, like you, that FCC is powerless, doesn't care about CB enforcement. He received in April an advisement that he is now liable for $15,000 and he has 30 days to pay. Period. The next step is jail. For what? Modded radios, amps, and "freebanding". A Mr. Flippo received NAL for deliberate interference to Amateur bands in 1999. He ignored it and continued to jam, interfere, and operate on Amateur 10 and 2 meters. Despite this, he continued his activities. He received NAL for $20,000. He STILL kept it up. US Marshals and FCC agents arrested him last July and charged him with 4 counts of malicious interference at $10,000 per--that's $60,000 folks. Out on bail, he faces trial in Federal District Court of Florida.

I'm not lying here, Kenneth, these are 2 actual cases against CBers doing exactly what you advocate. Can YOU afford $60,000? Or $15,000, or $7,000? I can't. The feds ARE back in business, believe it or not. The wheels turn slowly, but they are turning. CBers AND rogue hams are feeling the effects of enforcement. Dealers of illegal equipment have and will get popped--this from the mouth of the man who carries the stick. Don't flame me--I'm just passing along what I witnessed with my own ears. I mean, when you listen to the guy that is one of the keys in the new enforcement area, you talk to him one-on-one, ya gotta believe what he says--especially when he already has backed it up with action. The new FCC chairman, Michael Powell, is keen on cleaning up the mess that radio has become--in Amateur, commercial, and CB. The promoters of illegal equipment have a surprise coming. Hint: one of the VERY popular amp makers. Quote from Hollingsworth, "Their day is coming---soon". Does the nick "Sweet Sixteen" ring a bell? Again, this is not something I made up, so don't get mad at me--I'm just the messenger, not the message. And in closing, another quote: "There is one thing FCC can't do, and that is regulate 'stupid'!"

I am not here to create flames. Sure, people aren't going to like this. There are people here whom I have cultivated something of a newsgroup

friendship with. I don't want to ruin that. Again, I just post this in response to your trolling, in the absence of which, I wouldn't have reported these things. But your diatribe and insults towards hams as a group is uncalled for, and your "taking over" of the spectrum is a dream. If you think for one minute that CB will overrun other users, you are sadly mistaken. Yes, the lawless ones have gotten away with peeping into other radio rooms, find no one, and peeping into others, and others still. But, my friend, the junk yard dog is no longer chained up and you're gonna get bit----badly.

I have amateur radio equiptment here at my place, both my home shack and
at my office, I also enjoy listening to the hams, many of them are
personal friends of mine, one of their meetings each month the club
president runs from the radio at the Red Cross/REACT radio room.
Sometimes when they know I am listening, they will start sending code to
help me practice copying, and when I mean they start sending code, they
do it by graciously slowing down, cause some of these boys are fast, 2
of them are retired chief petty officers from the navy from WWII, these
boys have been around a long time and normally send code really quick.
Some of the newer club members joke with these two old timers that they
are intentionally sending it at super speed to try to burn everyone
heheh.

Then start tracking this one. Sooner or later Twisted is going to screw up. What is really telling is right after his actions have been openly exposed on this news group, bang!, he now reverts to using an anonymous account the very next day. Humm. Now his on-line persona "Twisted" is nowhere to be found. Now we get treated to the anonymous posting routine because he can't show his face in public without getting laughed at. This anonymous account is likely the same account he, Twisted, has used at other times too. All I can say at this point is Twisted is a pure and simple coward. He can't come out to defend himself in public so he has to hide behind fake accounts, names, and let others fight his battles for him. After all that he has done I still don't have to hide my identity, but he does! As often as I have gone round and round with Tim Nepo, about his pirate activities, at least Tim has the nerve to sign his name to his posts, Twisted can't even do that, he plays the cowards role.

mail2news (http://www.mail2news.com/m2w/default.asp)

(mail2news)Protective Measures:

We are not an anonymous mail service. We track the IP address of the system we receive mail from and include it in the message header information, which appears as X-MAILFROM-IP: [.....(numbers).....]. To find the header information of a message you're reading, click the Show Header button located near the top left of the message area.

We maintain a full login IP history for each account.

Our SMTPs are not public relays.

We do not allow numeric characters at the beginning of an Mail2World e-mail address; therefore, any login name beginning with a numeric character is a forgery.

Corrective Measures:

The IP address of any problem account will be forwarded to the appropriate department for further lookups and tracking; this includes, but is not limited to, cross-referencing an IP address with the logs of the Internet service provider that owns the address.

Complaints from any domain regarding unsolicited e-mail (Spam) will be investigated and the offending account will be subject to termination.

We reserve the right to terminate the account of any member who violates this policy or the Terms of Service agreement.

We reserve the right to legal action against any person who sends unsolicited mail; such action includes, but is not limited to, charges for the use of our bandwidth, disk space and CPU usage.

Although personally identifiable information is confidential (see our Privacy Policy), we will divulge this information to legal authorities when necessary.

Reporting Abuse:

We are dedicated to eradicating unsolicited mail and other abuses of the system as outlined in this policy and the Terms of Service agreement. All complaints and queries can be forwarded to our abuse coordinator at support@Mail2World.com.

To report a case of system abuse, please include the full unedited content of the message and the full message header in an e-mail to us. Without the header information, we cannot track the originating IP address. To find the header information of a message you're reading, click the Show Header button located near the top left of the message area. Copy and paste the entire header into your e-mail to us.

When submitting a complaint, you are giving Mail2World express consent to log into your account to examine the problem. We will reply to you regarding your complaint as soon as possible.

ANON.XG.NU

ATTENTION!: Due to bandwidth limitation we have put a throttle on the server. Although this helped, we simply can't afford the 400$ a month this server costs us. If we do not recieve any donations in 3 days we will be forced to make this a pay service. Please help us keep this site an add free and open service. If you would like we have set up a paypal account for any donation you want to send.

We at anon.xg.nu support the free flow of information and
ideas over the
Internet. To facilitate the free flow of information and
ideas we have an
acceptable use policy. By using this service you agree to
the following terms
and conditions.

If you do not agree to the terms and conditions of this Agreement,
including any future revisions, you may not use the Service.

ACCEPTABLE USE POLICY

1. E-MAIL
Users are prohibited from transmitting on or through any of the anon.xg.nu services,
any material that is, unlawful, threatening, abusive, libelous, hateful, or encourages
conduct that would constitute a criminal offense , give rise to civil liability, or otherwise
violate any local, state, national or international law.

(A) Harassment (whether through language, frequency, or size of messages),
Threats, and Fraudulent activity, is strictly prohibited.

Threats include but are not limited to using the Services to transmit any material
(by email, uploading, posting, or otherwise) that threatens or encourages bodily harm or destruction of property.

Harassment includes but is not limited to using the Services to transmit any
material (by email, uploading, posting, or otherwise) that harasses another.

Fraudulent activity includes but is not limited to using the Services to making
fraudulent offers to sell or buy products, items, or services, or to advance any type of financial scam such as ?pyramid schemes,? ?ponzi schemes,? and ?chain letters.?

(B) Users may not send email to any person who does not wish to receive it.

(C) Unsolicited commercial email/ Unsolicited bulk email. Using the Services to
transmit any unsolicited commercial email or unsolicited bulk email. Activities
that have the effect of facilitating unsolicited commercial email or unsolicited
bulk email whether or not that email is commercial in nature, are prohibited.

(D) Malicious email, including but not limited to "mailbombing" (flooding a user

or site with very large or numerous pieces of email), is
prohibited.

2. USENET
(A) anon.xg.nu is not responsible for the content of
any USENET posting, whether
or not the posting was made by a anon.xg.nu user.

(B)Postings to USENET newsgroups must comply with the
written charters or FAQs
for those newsgroups.

(C) Advertisements should only be posted in those
newsgroups whose charters/FAQs
explicitly permit them. The poster is responsible
for determining the etiquette of
a given newsgroup, prior to posting to it.

(D)Posting the same or similar message to one or more
newsgroups (excessive cross-posting or
multiple-posting, also
known as "SPAM") is explicitly prohibited.

3. WEB SITE USAGE.
Our site on the World Wide Web with its home pages in the
domain xg.nu, anon.xg.nu, or any other site operated by
anon.xg.nu (the
"Web site") is a complimentary information service offered
by
anon.xg.nu at no charge to users.

We may provide links on the Web site to other Web sites
which
are not under our control. In general, any Web site which has
an
address (or URL) which does not contain xg.nu or anon.xg.nu
is such a
Web site. These links are provided for convenience only and
are
not intended as an endorsement by anon.xg.nu of the
organization
or individual operating the Web site or a warranty of any
type
regarding the Web site or the information on the Web site.

You may provide a hypertext link to our Web site on another
Web site, provided that: (a) the link must be clearly marked
"Anon.xg.nu", (b) the link must "point" to the URL
"http://anon.xg.nu/" and not to any other pages within the
Web site,
(c) the appearance, position and other aspects of the link
may not be

such as to damage or dilute the goodwill associated with our name
and trademark(s), (d) the appearance, position and other aspects
of the link may not create the false appearance that an entity is associated
with or sponsored by anon.xg.nu , (e) the link, when activated by a user,
must display this Web site full-screen and not within a "frame"
on the linked Web site, and (f) anon.xg.nu may, in its sole discretion, revoke consent to link to our website at any time. All
other hypertext links to the Web site must be approved in writing
by anon.xg.nu.

4. MONITORING THE SERVICES.

anon.xg.nu has no obligation to monitor the Services, but may do
so for any reason if anon.xg.nu, in its sole discretion, believes that it is
reasonable to do so, including to: satisfy legal court orders; operate the
Services properly; or protect itself and its Users. Please see our Privacy Policy.

5. DISCLAIMER OF WARRANTIES and LIMITATION OF LIABILITY.

EXCEPT FOR CERTAIN PRODUCTS AND SERVICES SPECIFICALLY IDENTIFIED AS BEING OFFERED BY ANON.XG.NU, ANON.XG.NU DOES NOT CONTROL ANY MATERIALS, INFORMATION, PRODUCTS, OR SERVICES ON THE INTERNET. THE INTERNET CONTAINS UNEDITED MATERIALS, SOME OF WHICH ARE SEXUALLY EXPLICIT OR MAY BE OFFENSIVE TO YOU. ANON.XG.NU HAS NO CONTROL OVER AND ACCEPTS NO RESPONSIBILITY FOR SUCH MATERIALS. YOU ASSUME FULL RESPONSIBILITY AND RISK FOR USE OF THE SERVICES AND THE INTERNET AND ARE SOLELY RESPONSIBLE FOR EVALUATING THE ACCURACY, COMPLETENESS, AND USEFULNESS OF ALL SERVICES, PRODUCTS, AND OTHER INFORMATION, AND THE QUALITY AND MERCHANTABILITY OF ALL MERCHANDISE PROVIDED THROUGH THE SERVICE OR THE INTERNET.

THE SERVICES ARE PROVIDED ON AN ?AS IS? AND ?AS AVAILABLE? BASIS. ANON.XG.NU DOES NOT WARRANT THAT THE SERVICES WILL BE UNINTERRUPTED, ERROR-FREE, OR FREE OF VIRUSES OR OTHER

HARMFUL COMPONENTS. NO ADVICE OR INFORMATION
GIVEN BY ANON.XG.NU OR ITS REPRESENTATIVES SHALL
CREATE A WARRANTY. ANON.XG.NU AND ITS EMPLOYEES
ARE NOT LIABLE FOR ANY COSTS OR DAMAGES ARISING
DIRECTLY OR INDIRECTLY FROM YOUR USE OF THE SERVICES
OR THE INTERNET INCLUDING ANY INDIRECT, INCIDENTAL,
EXEMPLARY, MULTIPLE, SPECIAL, PUNITIVE, OR
CONSEQUENTIAL DAMAGES. DUE TO ANON.XG.NU.'S
PROTECTION OF YOUR ANONMITY AND PRIVACY, WHICH IS
OF GREAT VALUE TO YOU AND THE PRIMARY REASON FOR
YOUR USE OF THIS SYSTEM, ANON.XG.NU'S CUMULATIVE
LIABILITY TO ANY USER FOR ANY AND ALL CLAIMS RELATING TO
THE USE OF THE SERVICES SHALL NOT EXCEED THE
TOTAL AMOUNT OF SERVICE FEES PAID DURING A
ONE YEAR PERIOD, WHICH ARE AT PRESENT NO CHARGE TO YOU.

6. TERM OF AGREEMENT.

CONTINUED USE of the Services constitutes ACCEPTANCE of this
Agreement and any future versions. If you are dissatisfied
with
the Services or any related terms, conditions, rules,
policies,
guidelines, or practices, your sole and exclusive remedy is
to
discontinue using the Services.

7. JURISDICTION.

This Agreement is governed by Texas law without regard to
conflict of law provisions.

The federal and state courts located in Texas alone have
jurisdiction over all disputes arising out of or related to
this
Agreement and the Services within constitutional limits.You
consent to
the personal jurisdiction of such courts sitting in Texas
with respect to such
matters or otherwise between you and Anon.xg.nu, and waive
your
rights to removal or consent to removal.

8. REPORTING VIOLATIONS OF ANON.XG.NU'S AUP

ANON.XG.NU requests that anyone who believes that there is
a
violation of this AUP direct the information to
abuse@anon.xg.nu

If available, please provide the following information:

The date and time of the alleged violation, including
the
time zone or offset from GMT
Evidence of the alleged violation

Email with full header information provides all of the
above,
as do syslog files. Other situations will require
different
methods of providing the above information.

anon.xg.nu may take any one or more of the following
actions
in response to complaints:

block a users IP address
bill the user for administrative costs and/or
reactivating charges
bring legal action to enjoin violations and/or to
collect
damages, if any, caused by violations.

9. MISCELLANEOUS.

This Agreement, the Acceptable Use Policy, the Privacy
Policy,
and Anon.xg.nu's other user policies posted on anon.xg.nu's
Web
site constitute the entire agreement between you and
anon.xg.nu
with respect to your use of the Services.

Anon.xg.nu may revise, amend, or modify this Agreement, the
Acceptable Use Policy and any other user policies and
agreements, at any time and in any manner. Notice of any
revision, amendment, or modification will be posted on
anon.xg.nu's Web site ().

Thanks. As for the virginity, well, I had lost that long ago, however the appeal of power and "freebanding" faded quickly. I intend on eventually getting an amatuer license, and one day, may even get the hang of morse!

Simply put, I found it is much less aggravating to just talk where I do not have to worry about being traingulated and fined (or worse) and not play the power games, because you cannot win in the long run.

Hi All
I was wondering if any one knew of any national or international CB Radio clubs like the ARRL and RAC for ham. I know that REACT and The Four Way Flashers are now all but gone from the air waves and the rest seem to be outlaw side band groups. The reason I ask is that the next World Radio Conference, (WRC) is coming up in 2003 and I understand that the CB band may be up for sale thus killing CB for good. The only way to stop this is to have a good lobbied group that can prove to the International Telecommunications Union, (ITU) that CB is useful and must remain in tact and on 11 meters, as is. I feel that the FCC and IC know that this is coming and that is why we are seeing new bands like FRS coming along on VHF and UHF ware they are very easy to track and detect. The end may be near for us if we don't get together now and stop playing games on the radio.

sorry to dissapoint you but REACT is far from dead, in fact when I go to
the Ohio State REACT Council meeting tomorrow, I'll take ypour post
along so all the members can have a good laugh. for being a dead
organization, we're doing pretty darn good I'd say.

There is indeed a World Radio Conference coming up in 2003. In the US, the State Department and FCC are delegated, I would assume in Canada the Department of Communication or its successor will carry the flag. It is not open to general lobbying -- the RAC and ARRL (and CARF) work thru the International Amateur Radio Union which may be invited to pronounce upon such things as affect them. In general, Daddy Mac's 14th rule applies: when an issue reaches the stage of burning public discussion, it has already been settled.

But I think you are getting stirred up a tad early. The 25-30 portion of the spectrum would not draw $1.98 in an auction; they are garbage frequencies. While most countries wish they had never heard of CB, there is not any organized movement to do away with it. I do rather expect that fairly soon Uniden, et al, will have a few hundred boatloads of radios no one will allow to land but that is another issue.

As far as tracking, I would much rather find a 27 MHz radio than a UHF one. Some think skip makes it harder but that is really not the case. The FCC tracked German Uboats within a square mile in the Atlantic from Grand Island Nebraska (since closed) in 1940. What can be done with a scope can be done a lot faster with a compooter.

Do agree about the games bit, however,

Dick N&#65533;BK

I hear alot about the upD858C and it is all good.
I still don't understand bcd programming.
Maybe it's gods way of telling me not to fry my girlfriends radio.
Anyway, what do you do to change the programming?
I believe that by shorting or applying a certain voltage to a specific pin
the freq should change is this correct.

What pins and voltage to apply or short to get what freq's.

Thanks in advance.

The FCC can't touch the many pirate operators outside their jurisdiction.
The 10 metre ham band is a wasteland. There is so much unused space
there that hams can always find a clear channel.

Oz used to have some of the more gut-rumbling amateur exams in the world and a really surly bunch of regulators. You may have a larger problem with them than a castrated Fat Cousin Charlie. But the fact of the matter is that you have shot Mongo by straying into an international treaty allocation. When your regulators start getting bitch letters from another country, they pretty much are treaty-bound to roast you.

Use your own judgment -- which should get me a strong letter and a personal visit from the Department of Redundancies Department -- given that you seem to be doing just that, but whether or not the legal VKs use it or not, it is OUR sandbox, boobie.

Well some CBers do show up in the Ham news groups too. Some people operate
both CB radios and Ham rigs. The Ham news groups also get a few CBers
telling us their not hurting anything by operating on the Ham bands at
times. You know what kind of reception that normally gets there. Finally
there's nothing stopping you from posting your comments on a Ham news group
if you should you so choose.

If you get nailed by the FCC before then you just may kiss your chance of getting a ticket good by. That would be a waste. You get tagged, after you get your ticket, using that rig outside of the normal Ham bands you can get fined, and again maybe kiss your license good by too. As cheap and small as some of the AM only CB radios are I'm sure you could fine a spot for it. As far as another antenna goes, just use a simple 2 position coax switch. That way you can use the legal rig they way it was intended to be used, and when you want to "monitor" outside of the band all you do is flip the coax switch to connect the antenna to the other radio. There maybe some issue with the local police about have a "scanner" or scanning type radio in the car. The protection against that type of trouble is special permission from the police in the form of a written letter which you must keep in the car, or a Ham license.

The written exams to get a Ham license up to General Class, which gives you H.F. access if that is your main interest, are easy. The CW test will take some work, but is only required if you want to operate below 30 MHz. Above 30 MHz all you need is a Tech license, and no code test required. As a matter of fact above 30 MHz all Ham license classes have exactly the same privileges. Your choice. You can start at the Tech Class level easy, then as you learn you can test for the higher level license classes when you feel your ready for it.

Hello

I've got a question that I hope someone could answer. I am going to be looking for a place to rent as soon as I get enough money for a sec. deposit and I was wondering if anyone knew how landlords feel about mounting antennas on their houses or property. I'm 19 and looking to move out of my parent's house and I really don't want to give up CB Radio. Its too much fun (at least in my area). Thanks in advance.

Brian

well i don't want to run a bootleg station or anything. I just want to talk to
a few of the locals i've made friends with. Not into anything illegal.

You might want to talk with Tim Nebo (timnebo@aol.com). He's 20 and he's
got a huge bootleg station going from an apartment in Galveston, TX and is
having a blast.

Is this how I should act now that I am a no code tech?
I am ashamed of the behavior that the ham operators
have displayed in this NG. I have had more civil conversations with the town
agitator.

I will not give my call for fear of being associated with some of the
yahoo's I have seen posting here.
First of all most of it is off topic. Secondly this is a communication media
and I am still responsible for my behavior as you should be.

How long do you think that the Citizen Banders will put up with this crap
before they start collecting call signs and posts by the operators and
forwarding them to the FCC?
How many letters, e-mail's and phone calls will it take to get to the center
of this abuse? If your call is on this black list will you be terminated?

Valid point:
If this is how they act with a communication media such as the internet
surely they can't be behaving themselves on the allocated bands.

Do you know that even if you stopped posting today your previous posts will
be on a hard drive for quite some time?

I am not going to even bother with the flame proof suit
In fact I don't even care if there is a response just some food for thought.

Quack! Quack!
Mudducks rule!!

Maybe use common sense and try to use an antenna that matches the exterior
so it doesnt look like your trying to find space aliens. Also there are
antennas that look like TV antennas. Say that your too poor to get cable, at
19 it's believable. Be carefull, many irrisponsible Hams have caused a black
eye on anyone having an antenna and few people will know that most cb'ers
don't generate rf interference like Ham people:)
Besides most pc's from the 90's will generate more interference then the
average cb base rig.
Sincerely,
Ken

I think CB'ers are just to freewheeling and independant to be constrained by
a club. Maybe this newgroup is the closest thing to a national club cb has.
Heck cb is very active and the airwaves are hummin:)

This is a clean 10-11 meter pre amp. Works grt and will take a little power behind it going in, too. I have used it with both 10 and 11 meter eqpt. Go and take a look... There is no reserve on it. It brings those weaker signals right on in.

Both of us have 6 band radios I know it was 28.something

Anytime you need the exact frequency, drop me an E-mail, son. I have the charts for every Export radio every produced.

>Today
>there is CB, High CB, Very High CB(28.xxxmhz)

Carefully read Jerry O's response. He is right on target. There is a small but very dedicated group of Amateurs parked on 28.085, recording and logging what goes on, and sending reports to the FCC.

Do they care? Yes. Mr. Hollingsworth called me last week for an update on a situation, and while he had me on the phone, he asked me to drive by a particular address and see if there were any antennas visible at a suspect's house.

By the way, my rig in the car is a FT-890, hooked to a 10-meter hamstick held to the car by three magnets. As I roam the Interstates, I'm scanning the lower portion of 10 meters in 10KHz steps. As long as I spend hours on the road, I might as well listen to some truckers......

and get the name of their company and the trailer number.......

and call ahead to the Chicken Coop and see if a DOT officer will get me a driver's ID.

See you on 10!

QRM

Come on guys, ham radio just isn't about taking the FCC test and legally operating on the ham frequencies. Ham radio is about learning all you can about electronics, it's also about making friends. Yes, I've been a ham radio operator for 30+ years and enjoy operating 10 meters from my vehicle. And yes, as many other hams have. I started out with the early days of CB back in the early 60's when I was in the US military.

When the cb'ers moved above 27.405 to 27.995 I wasn't surprised, that portion of the frequency spectrum was basically un-used. When they moved into the 10 meter ham band I was surprised. Why? Because they could I guess. I have not been interfered with in any qso so far.

I can honestly say I have never operated on a frequency I was NOT permitted to be on. I even use my 10 meter rig while on duty (police) - I use a mag mounted, converted cb antenna and a cigar plug in radio. I do monitor cb channel 19 and have aided numerous truckers when they called in for assistance. Let's try to respect each other here and on the air waves.

Have a good time and enjoy the hobby.

Jake

This is actually a pretty astute question, albeit worded differently. If you look through rec.radio.amateur.policy and take note of all the CB/11 meter related threads started by amateurs and NOT CBer's, it's actually pretty astounding...or is it? At the very least, it seems to indicate that 11 meters is now perceived, by some, as a threat of some sort.

I've noticed that it's become popular to blame the entire 11 meter community for the incursions into the 10 and 12 meter ham bands. Most of us know exactly who's responsible for this, but it's far easier the blame the entire segment rather than open some type of dialogue and perhaps join forces toward a shared solution. (Or should I say, resolution.)

Dick McCollum made a very intelligent suggestion re. this not too long ago. It was somewhat frowned upon by his contemporaries because it involved communication, compromise, and did not decry the entire 11 meter "freeband" community. Interesting, do we ALL really want to reach a solution...or is continuing this 30 year (plus) old "game" actually the point of all the dialog, diatribes, and posturing? Just thinking out loud. Take care everybody and 73.

Mark

Come on guys, ham radio just isn't about taking the FCC test and legally operating on the ham frequencies. Ham radio is about learning all you can about electronics, it's also about making friends. (following your stpid fucking logic, I guess then next time you arrest someone you should take them to dinner first) Yes, I've been a ham radio operator for 30+ years(and have always sucked ass with the CB criminals)
and enjoy operating 10 meters from my vehicle. And yes, as many other hams have. I
started out with the early days of CB back in the early 60's when I was in the US military.(don't ask, don't tell)

When the cb'ers moved above 27.405 to 27.995 I wasn't surprised, that portion of the frequency spectrum was basically un-used. (Jake, you are fucking stupid. It is used by MANY services) When they moved into the 10 meter
ham band I was surprised. Why? Because they could I guess. I have not
been
interfered with in any qso so far.(because I get on there and be illegal with them)

I can honestly say I have never operated on a frequency I was NOT permitted to be on.(of course, in my diseased mind, "permission" means I have a radio that will go there) I even use my 10 meter rig while on duty (police) -
I use a mag mounted, converted cb antenna and a cigar plug in radio. I do monitor cb channel 19 and have aided numerous truckers when they called in for assistance.(what kind of assistance? Likely was sucking ass to justify criminal activity) Let's try to
respect (when the illegal fagboys respect the rules, they will be worthy of respect, not before)each other here and on the air waves.(see, you suck ass with illegal faggots)

Have a good time and enjoy the hobby. (And I will gladly suck ass with you illegal fagboys any day!)

Jake (the illegal ass kissing flake)

Come on guys, ham radio just isn't about taking the FCC test and legally operating on the ham frequencies. Ham radio is about learning all you can about electronics, it's also about making friends. (following your stupid fucking logic, I guess then next time you arrest someone you should take them to dinner first) Yes, I've been a ham radio operator for 30+ years(and have always sucked ass with the CB criminals)
and enjoy operating 10 meters from my vehicle. And yes, as many other hams have. I
started out with the early days of CB back in the early 60's when I was in the US military.(don't ask, don't tell)

When the cb'ers moved above 27.405 to 27.995 I wasn't surprised, that portion of the frequency spectrum was basically un-used. (Jake, you are fucking stupid. It is used by MANY services) When they moved into the 10 meter
ham band I was surprised. Why? Because they could I guess. I have not
been
interfered with in any qso so far.(because I get on there and be illegal with them)

I can honestly say I have never operated on a frequency I was NOT permitted to be on.(of course, in my diseased mind, "permission" means I have a radio that will go there) I even use my 10 meter rig while on duty (police) -
I use a mag mounted, converted cb antenna and a cigar plug in radio. I do monitor cb channel 19 and have aided numerous truckers when they called in for assistance.(what kind of assistance? Likely was sucking ass to justify criminal activity) Let's try to
respect (when the illegal fagboys respect the rules, they will be worthy of respect, not before)each other here and on the air waves.(see, you suck ass with illegal faggots)

Have a good time and enjoy the hobby. (And I will gladly suck ass with you illegal fagboys any day!)

Jake (the illegal ass kissing flake)

This is actually a pretty astute question, albeit worded differently. If you look through rec.radio.amateur.policy and take note of all the CB/11 meter related threads started by amateurs and NOT CBer's, it's actually pretty astounding...or is it? At the very least, it seems to indicate that 11 meters is now perceived, by some, as a threat of some sort. (JUST LIKE AIDS) ILLEGAL FAGGOT KEYCLOWNS ARE THE RF EQUIVALENT TO AIDS, AND MUST BE ERADICATED!

I've noticed that it's become popular to blame the entire 11 meter community for the incursions into the 10 and 12 meter ham bands. THATS BECAUSE IT IS TRUE! Most of us know exactly
who's responsible for this,THEN REPORT THE SCUMBAGS AND HELP WIPE EM OUT, OR DO YOU APPROVE OF IT? but it's far easier the blame the entire segment rather than open some type of dialogue and perhaps join forces toward a shared solution. (Or should I say, resolution.)NO WAY. ILLEGAL IS ILLEGAL. YOU WANT RESOLUTION BUST THE CRIMINALS

Dick McCollum (THE BIGGEST SUCKASS ON THIS NEWSGROUP)made a very intelligent suggestion(IF YOU ARE A CRIMINAL KEYCLOWN WHO WISHES HE WERE NOT) re. this not too long ago. It was somewhat frowned upon by his contemporaries because it involved SUCKING ASS WITH CRIMINALS communication WITH CRIMINALS, compromise WITH CRIMINALS, and did not decry the entire 11 meter "freeband" community. FREEBAIND AINT FREE, IT BELONGS TO OTHER SERVICES, DUMBASS. Interesting, do we ALL really want to reach a solution...WHO CARES WHAT A GROUP OF CRIMINAL ASSHOLES WANT? IF YOU CARE YOU ARE PROBABLY ONE OF THEM, MAKE A PROFIT OFF WHAT THEY DO, ETC. or is continuing this 30 year (plus) old "game" actually the point of all the dialog,diatribes, and posturing? NO WAY. THE POINT IS THEY ARE ILLEGAL ASSHOLES WHO NEED TO OBEY THE LAW! Just thinking out loud.(TO HEAR MY MORONIC HEAD RATTLE) Take care everybody and 73.

Hi James,

You can expect "nasty chaps" to make unwelcome appearances throughout your entire life, in every activity, and for any reason. Two-way radio (and usenet, don'tcha know) is certainly no different. It is a lot of fun and you can meet some very entertaining people and learn a lot at the same time. Welcome to radio.

dB

730. READ THE CB FAGBOY BOOK!!!!!!!!!!!!

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have,
with adult supervision,drooled into a dictaphone the following masterpiece
of authorship and
it is now available at your local book store...Don't miss "Muskrat Love",
the heartwarming story of
3 illegal CB'ers who find love and marriage through uniting in hatred for
Leland, the mean 'ole hammie they wish they
were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and
into 10 meters, listen to the 3 sweet little CB'ers plot, plan and generally
scheme to out flame the greatest flamer of all time. Read about their use
of electronic components as aids to their sagging libido's. Learn why no
female relatives ever come to visit. Look at the special 13 page photo insert
that shows the dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am not a faggot", by Dweebo,
and will become recognized as a major literary accomplishment. The trippin'
trio have outdone themselves this time, and you have just gotta read it to
believe it. Only 29.95 now at your local bookseller!

738. Re: Ch19 Band F crowded 28.185

Newsgroup: rec.radio.cb
Date: 2001-05-06 16:15:47 UTC
From: YRAC <YRAC@nc.rr.com>
Message-ID: <TMeJ6.18606$Gx4.2576753@typhoon.southeast.rr.com>
Source record: 81114

It's my experience that the entire CB scene is dropping in activity level, both on the regular 40 channels and on the illegal 10 meter intrusions.

The word is getting out about 10 meters. As for the regular channels, I have no explanation. I can see why the public has drifted to cell phones and FRS. CB isn't "cool" anymore. It doesn't appear in movies and TV shows (Dukes of Hazard, etc.).

I'm puzzled, however, about Channel 19. It is pretty quiet in my area. It used to be a busy place, several years ago. Have the truck companies begun using satellite and cellular communication? The trucks still chat about "local" information and conditions. But I don't hear the ragchews and noisemakers that used to be the signature of Ch. 19.

For Jake and other law enforcement people--does this mean you will be doing more monitoring? I can see why you turned it off, before. I know I'm monitoring more and giving out "local information" on a regular basis. And drivers seem polite and stand by until we get the information across to the station requesting it.

<Jake@nauticom.net> wrote in message news:3AF55334.640F681D@nauticom.net...

771. HOW it IS !

Newsgroup: rec.radio.cb
Date: 2001-05-06 17:34:41 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3af57f68@news.planetc.com>
Source record: 81117

James:
Which country are you in, the UK? I am in the US and am a CB shop. I would advise you to go to a Local Independant CB shop or store (they may sell other things there too in the UK) and talk to them about it. Then go to a truckstop and talk to the truckers about it. And look around in your neighborhood or town and see some people with CB antennas on their cars and talk to them about what they use it for, and what you can expect. If they are a Ham and say favorable things about CB, then listen to them. If not, DON'T listen to them! DB is right--there are IDIOTS and Sodomites in every realm except the Kingdom of God, where they are all crispy critters as we speak! What you see in this CB newsgroup too much lately is some NON-CB people (possibly disgruntled HAMS that are SODOMITES) that have nothing better to do than to BASH CB, which is HATE speech because they hate CB for whatever reason) in order to hope that people will go to Ham instead. Their perverted plans are backfiring and I can't wait until the Digital Police come and take their computer, their Ham Equipment, their AIDS infested homes, and throw all of it into the dump, and them being locked up being forced to listen to audio tapes of the King James Bible until they change their wicked, evil, communist, sodomite ways. Because if this is not done, I'm afraid they too will become CRISPYCRITTERS!
Dave!!!!!!!!!!!! Go to it Chap!

Dirt Quacker:
GOOD points! How must they talk on the Hambo Bands, if they digitally print such trash? The Bible says that what a man speaks is in his heart. Sodomites is what they are. 1% of the population are that. They took over some rest areas, but they AIN'T TAKING OVER CB or the Ham bands for that matter! Can you see the Brimstone comming? I can feel the wind & heat it is creating as it gets NEARER !!!!!
Dave!!!!!!!!!!!!!!!!!!!

"mudduck #1" <mudduck#1@yahoo.com> wrote in message news:7y7J6.26273$3c6.7551329@news1.elmhst1.il.home.com...
Is this how I should act now that I am a no code tech?
I am ashamed of the behavior that the ham operators have displayed in this NG. I have had more civil conversations with the town agitator.

I will not give my call for fear of being associated with some of the yahoo's I have seen posting here.
First of all most of it is off topic. Secondly this is a communication media and I am still responsible for my behavior as you should be.

How long do you think that the Citizen Banders will put up with this crap before they start collecting call signs and posts by the operators and forwarding them to the FCC?
How many letters, e-mail's and phone calls will it take to get to the center of this abuse? If your call is on this black list will you be terminated?

Valid point:
If this is how they act with a communication media such as the internet surely they can't be behaving themselves on the allocated bands.

Do you know that even if you stopped posting today your previous posts will be on a hard drive for quite some time?

I am not going to even bother with the flame proof suit
In fact I don't even care if there is a response just some food for thought.

Quack! Quack!
Mudducks rule!!

Hello

I've got a question that I hope someone could answer. I am going to be
looking for a place to rent as soon as I get enough money for a sec.
deposit and I was wondering if anyone knew how landlords feel about
mounting antennas on their houses or property. I'm 19 and looking to
move out of my parent's house and I really don't want to give up CB
Radio. Its too much fun (at least in my area). Thanks in advance.

Brian

This is actually a pretty astute question, albeit worded differently. If you look through rec.radio.amateur.policy and take note of all the CB/11 meter related threads started by amateurs and NOT CBer's, it's actually pretty astounding...or is it? At the very least, it seems to indicate that 11 meters
is now perceived, by some, as a threat of some sort.

I've noticed that it's become popular to blame the entire 11 meter community for the incursions into the 10 and 12 meter ham bands. Most of us know exactly
who's responsible for this, but it's far easier the blame the entire segment rather than open some type of dialogue and perhaps join forces toward a shared
solution. (Or should I say, resolution.)

Dick McCollum made a very intelligent suggestion re. this not too long ago. It
was somewhat frowned upon by his contemporaries because it involved communication, compromise, and did not decry the entire 11 meter "freeband" community. Interesting, do we ALL really want to reach a solution...or is continuing this 30 year (plus) old "game" actually the point of all the dialog,
diatribes, and posturing? Just thinking out loud. Take care everybody and 73.

Mark

Greetings!

There are two types of pills...

One is for the amp reference - and the number of pills usually
indicates the "power potential" - the more pills, the more power it
develops.

The other type of pill is used for the "operator" of the station, and
it usually used to reduce inflammation or headaches caused by
frustration...it's usually called an Analgesic.

On Sat, 5 May 2001 15:50:44 -0400, while the modem was busy tying up
IRQ's with the Mouse, "Kenneth" <pwrguy@intergrafix.net> dissertated
the following:

:+> When people say 3 pill or 12 pill what are they talking about? I have a
:+> feeling its something to do with how the amp is made.

Hello
I have a President Lincoln (2510) SSB CB Radio 26.000MHz to 30.000MHz
this radio is in perfect working order and absolute excellent condition 9/10
all round. it is boxed with the origonal microphone but also has a sedelta
power mike with it. to view this radio, go to
http://www.transmission1.net/cbradio/review-president_lincoln.html

I also have a perfect almost mint condition Yaesu FT 747-GX
this radio will receive AND transmit from 0 to 30 MHz on ALL modes to view
this radio go to
http://www.qsl.net/sm7vhs/radio/yaesu/ft747/ft747gx.htm

I am asking ?135.00 UK for the Lincoln, that's $215.83 US Dollars and
$333.26. Canadian.
For the 747 GX I am asking ?275.00 UK that's $395.70US Dollars and
$607.30 Canadian
These prices include shipping by air-mail express worldwide.
I would be interested in a deal on a top of the range scanner, base or
mobile, something like a Yupi 9000.MKII or a BC9000XLT
if interested in either please e-mail me
regards
Syd
United Kingdom

I think that is the trouble is that they are the freewheeling outlaws and that will be there downfall. The airwaves may be humming but are they productive? 11 meters was humming in the 50s when it was a Ham band and then it was striped away and given to CB as well as some commercial interests. It will take 20 years to clear up 11 meters in our region and make it viable for commercial exploitation so they will have to start soon and it usually starts just after the WRC conferences. I could see it if we were paying licence fees to the governments then they would at least be able to say that we were financially viable. Truckers very seldom use the band for more then idol chit-chat and most of the truckers I deal with, (I am a shipper Receiver at a major Where House and Distribution centre) don't even use one because FRS and Cell-phone cover there needs and they don't have to worry about the interference and skip. I still enjoy the CB but there seems to be no one on to talk to in an aria with 1,000,000 people. As for reporting accidents a cell phone is much more suited for that need. My point in the original post was that if we can't prove through a national organisation that we are useful and productive WRC will just take the band away and give it to some companies that will make use of it and pay big bucks for the licence.

Well it is good to hear that you still have a cell that is still operating. I may ask you how many members do you have nation wide? This is not a laughing mater and unless the larger clubs and groups like REACT can prove to the governments of the entire world and corporate interests that we have a right to the 11 meter band we may just lose it for good. Just like the Hams lost it in the 50s or like the American hams lost 220 Mhz a while back or the short-wave broadcasters lost 40 meters to the hams after one of the last conferences, (it was shared between broadcast stations and ham before).

Weight of the radiol wil more than likely exceed the ability of the glue to hold the velcro to either.

Yep, it is. I encourage ALL CB people to stay off 28.0 mc & above, and I tell ALL MEANIE 5th collum Soviet Hambos to stay off 11 meters!!!!!! The GOOD Hams are still welcome on 27 MegaCycles!!!! By the way, what year did mc go to mhz ? I guess early 60's but I may be wrong!
Dave!!!!!!

"Kenneth" <pwrguy@intergrafix.net> wrote in message news:tf8qf1ea02bh9a@corp.supernews.com...
Me and a friend were talking truck to truck and we went to band "F" ch 19. Both of us have 6 band radios I know it was 28.something
Anyway it was kinda crowded with other truckers! This bodes well for cb. 28mhz lacks the bandwith for the new wireless techs coming online that the FCC is gonna make bucks on. The Hams can kiss 1.4 ghz goodbuy and the Hambos have basically ceeded 28mhz to the good guys it seems.
The reason some Hams are going nuts are they know they are losing! Today there is CB, High CB, Very High CB(28.xxxmhz) There afraid that when the VH CB gets crowded we will take over the 6 meter band too.
Maybe Custer had the right idea...We take all the Hambos and herd them to a Ham reservation like maybe Florida and give them ohhh lets say ch 1 and ch 40 from old CB. Thats all they really need anyway. The good guys only use 1 and 40 for SWR's anyway. And Florida is perfect since most Hams are over 80yrs old allot of them live in Fla already.
The FCC can just devide the spectrum into two parts. Above 900mhz can be high tech like wireless LANS and WANS and cellular and below that it will be FREEBANDING!!!!!!!!!!!!!!!!!!!!!!!!!!

"Lord Elric" <elric@kscable.com> wrote in message news:SqYI6.8086$oG4.790078@typhoon.kc.rr.com...
I would like to ask a question to amatuers in a cordial and polite manner. I have, in my car, a RCI 2950. I haave had it tuned, aligned, and scoped to eliminate as much as possible any bleed, it is not overmodulated, nothing has been clipped, but it has been converted to enable 11 meter. I have intentinally also had the output lowered to around 5 watts, and I have not transmitted outside the legal 40 channels. Why do I have this radio you may ask? I like to listen to 10 meters, scanning through it, enjoying some conversations I have heard. I have this radio converted because I talk on the legal 40 CB, and do not have room for a second radio and antenna. Now, I know and accept that this is illegal as far as non type accepted, but I wanted to ask, in all seriousness, how am I harming anyone by suing this radio setup in the manner that I am? Just something I wished to ask, and thanks for any courteous replies.

Elric

800. RUMOR: N8 putting up HATE CB booth?

Newsgroup: rec.radio.cb

I hear Mr. Wimp may be putting up a HATE CB booth at the Dayton hamfest soon. I heard he will have all his illegal weaponry and CB finding equipment there on display to frighten all to conform to communism's plank #6, including but not limited to NUCLEAR WEAPONS!

I encourage all that are going to stop by and ask to see the Hammer & Sickle tatooed on this LEFT arm! Ask him to roll up his sleve so you can see it. Then when he rolls it up, tell him you are a Medic ready to get a pint of blood from him, IF he has any, for a blood drive! Then after you get a pint or gallon, get a blood test to see how much over the limit he has been! Then see if any hospital will buy it, since it will be watered down by blood thinning DRUGS! Then ask the hospital to see if it is American blood or not! Brace yourself for the answer! He may not be possibly from this country, but out of this world!
Dave!!

Hi All
I was wondering if any one knew of any national or international CB Radio clubs like the ARRL and RAC for ham. I know that REACT and The Four Way Flashers are now all but gone from the air waves and the rest seem to be outlaw side band groups. The reason I ask is that the next World Radio Conference, (WRC) is coming up in 2003 and I understand that the CB band may be up for sale thus killing CB for good. The only way to stop this is to have a good lobbied group that can prove to the International Telecommunications Union, (ITU) that CB is useful and must remain in tact and on 11 meters, as is. I feel that the FCC and IC know that this is coming and that is why we are seeing new bands like FRS coming along on VHF and UHF ware they are very easy to track and detect. The end may be near for us if we don't get together now and stop playing games on the radio.

Additionally, speed limits in many places are arbitrarily set
low. The USA population routinely exceeds highway speed
limits and the police don't care one bit.

And for most people, they are speeding just staying with
the flow of traffic on American highways. Interstae 80 in NJ
is 55 for 30 miles before NYC. The AVERAGE flow of traffic
is usually 65/70 or higher. Anyone doing 55 is (or should
be) in the extreme right lane.

>By the way, what year did
>mc go to mhz ? I guess early 60's but I may be wrong!

It was later than that. I remember that the April QST for that year published a long article on how to convert cycles to Hertz. There were some log charts and other devices. At the end of the article, for those without advanced math skills, there was a handy operating guide which could be memorized by anyone:

CYCLES VS HERTZ
1=1
2=2
3=3
4=4
5=5
6=6, etc.

Why would anyone have the eBay blues? Unless you mean illegal CB gear being bounced off. But I thought you said AE was a legal CB club? If AE isn't into illegal CB why the concern with illegal equipment getting bounced off of eBay?

While I have no particular argument with the history presented it is pretty selective. Since the 1947 Atlantic City Conference, the Amateur Service has picked up, worldwide, the 15 meter band plus the 12, 17, and 30 meter bands in 1976. By and large, the treaty has been nice to the Amateur Service. And over that period, the 1.8-2.0 160 meter band was cleared of Loran A from the war. The worldwide 80 meter band is up to 3.9 from the European 3.8 top of some years ago.

But the treaty is not the only source of Amateur frequencies. Going back into antiquity, the ham bands in the US were wider; only 80 meters is its original width (and the only one actually containing the wavelength for which it is named) and only that in Region 2, the Americas. The 11 meter allocation was never a treaty band but was pretty common in Region 2 and Region 3 (Asia, Oceania). It was withdrawn for lack of Amateur interest in 1958 -- I vas dere Sharlie. Originally, the bands were harmonically related so bands existed at 5 meters, 2 1/2 meters - both moved after WW2. A 112 MHz band presented a problem for aircraft and was moved to 144-146 worldwide and 144-148 in region 2. The 220-225 band was an antiquity and available only in Region 2. The FCC has honored agreements made when my dad was in knee pants and I am 57.

Forty is and has been a popular SW broadcast band. The treaty part is 7.0-7.1 with 7.1-7.3 available in Region 2 for as long as I can remember. The band may well be moved at the next Conference because Amateur sigs do bother the broadcasters. There is also some experimentation done in the 5

MHz range presumably to establish another Amateur allocation.
Nothing sinister about fixing a pain in the drain.

One of the problems in Business allocations is that a company cannot get the same freq everywhere -- in fact I believe the Red Cross has the only nationwide VHF freq. So United Parcel applied for and got the 220-222 part (leaving 223-225 Amateur) to set up their trucks with a uniform communication system but never used it. Damfino. But the band was not a treaty band to begin with. And like 11 meters, it was basically re-allocated for lack of interest. But we also picked up 902-928 MHz on a secondary basis so who's to say.

As I noted earlier, the action in radio is most certainly not in the lo VHF spectrum. One of the reasons for lax enforcement has been that no one really gave a shit about this part of the spectrum anyway. If it could be put up for bid, the whole 25-30 MHz area would not bring in $1.98 US or Canadian.

> Cameraman-Radio Canada 574

I respectfully disagree with you on several points, and I agree on one or two.

>I think that is the trouble is that they are the freewheeling outlaws and
>that will be there downfall.

I would have agreed with you six months ago. However, I see a backlash against illegal operators. Legitimate operators are taking back 11 Meters. There are not as many folks on CB today, but they are better operators. The illegals are a noisey minority. They appear to be numerous but their numbers are declining.

> 11 meters was humming in the 50s when it was a Ham band and then
>it was striped away and given to CB

It was not "humming". It was hardly utilized. Hams had another band next door with the same characteristics (10 meters). It was big enough for everything which was going on in the 50s, so 11 meters was unnecessary. Furthermore, 11 meters was not harmonically related to the other ham bands, which was very important in the 1950s. (See my previous "History of 11 Meters" for more info).

>It
>will take 20 years to clear up 11 meters in our region and make it viable
>for commercial exploitation

Any move toward commerical use of 11 meters is news to me--and I believe I keep up with such things very well. I am not aware of any intent to "sell" the band. And, as someone else pointed out, it does not have that much value to anyone.

>Truckers very seldom use the band for more then
>idol chit-chat

No surprise. That's what the band is for. While emergency calls have dropped in number, there still is lots of road information and direction-giving. And you still hear some good stuff now and then. Sample:

Trucker 1: Watch out at the 175 and a half. There's a trooper handing out "good driving" awards.

Trucker 2: Thanks. If I get one more "good driving" award, I'll be LOADING this truck instead of steering it down the highway!

> most of the truckers I deal with, (I am a shipper
>Receiver at a major Where House and Distribution centre) don't even use one
>because FRS and Cell-phone cover there needs and they don't have to worry
>about the interference and skip.

In an effort to remain on topic, we'll ignore whether you meant "Warehouse" or "Whore House" in describing your employment. Cell phones and possibly satellite systems have taken some of the communications off of CB. FRS is not a player. The range is too short (three quarters of a mile vehicle-to-vehicle).

>I still enjoy the CB but there seems to be
>no one on to talk to in an aria with 1,000,000 people.

If you monitor, you will have chances to help with local information and an occasional emergency call. But yes, radio traffic is down considerably from several years ago.

>As for reporting
>accidents a cell phone is much more suited for that need.

Agreed, although some drivers are so busy with gears (or dealing with the emergency) that they don't have time to deal with cell phones. It's easier to call someone on the radio and ask them to report a situation for you.

>WRC will just take the band away and give
>it to some companies that will make use of it and pay big bucks for the
>licence.

I feel your intentions are sincere, but you are mis-informed on many aspects of CB radio. If you are not already a regular reader of Popular Communications and other radio magazines, I recommend that you make it a habit. Your posts come across as either:
(a) someone who repeats what he's been told at the CB shop; or
(b) someone who still operates and talks like it's 1990.

Yours truly,
QRM

Might as well go see the moose, http://www.fcc.gov and use the search feature. CB rules are Part 95. The legal 40 begin at 26.965-27.225 as the first 22 using the 45s and 95s for Radio Control then 10 kHz increments thru 27.405. There is a channel oddity in that it goes 22, 24, 25, 23, 26 because 27.255 was included in the original 23.

>the Ohio State REACT Council meeting tomorrow, I'll take ypour post
>along so all the members can have a good laugh. for being a dead
>organization, we're doing pretty darn good I'd say.

Dear Keith:

I believe the individual was speaking in terms of 11 Meters. From that perspective, REACT is dead and gone!

I know the organization believes itself to be alive and well. Facts, however, tell a different story:

*Membership has dropped from a high of 70,000 several years ago to approximately 4,000 today. (Info from REACT)

*Monitoring on Channel 9 has disappeared, thanks to the explosive growth of cell phones.

*REACT teams monitor a "traveler's assistance" frequency on UHF. However, there are very few calls from the public. Most of the communications is inter-Team and intra-team chatter. Few "average" citizens own GMRS equipment. For those who do, the PRSG repeater directory is woefully outdated, rendering it practically useless for finding assistance.

*REACT brags about receiving presidential recognition. It fails to mention that this was given over 20 years ago to celebrate the "silver" anniversary of the organization.

I challenge you or anyone else in REACT to defend the numbers appearing on the REACTINTL.COM web site for hours monitored, calls taken, and public money saved. I'm not sure you could have justified these numbers ten years ago, and I'm positive the group cannot do it today. Opportunities to do so have been presented all the way to the top. REACT International HQ will not even acknowledge E-mail or FAX messages on this topic. (Correspondence records on file).

>for being a dead
>organization, we're doing pretty darn good I'd say.
>

At what? Directing traffic at accident scenes and parades? That's not the public's recollection of what you do, and it's not what's reflected on your web site. If you've changed your focus, fine. Find a niche. But remember that the perspective in this NG is 11 Meter operation, and REACT has no presence to speak of on CB frequencies. That's what the writer was referring to in his post.

Yours truly,
QRM

>thanks for any courteous replies.

Courteous reply follows:

(1) You probably are hurting no one. Your power is not excessive for CB, nor are you bleeding across several channels.

(2) You report to us that you only LISTEN on 10 meters.

If you can continue to exercise self discipline, you probably can run that radio forever without attracting any attention.

Unfortunately, there are some idiots who want to create a distrubance. Then they scream when they get the attention that results.

Apparently you are not one of these. Congratulations.

820. DAVE AND DEBBY KEY TO CONSPIRACY AGAINST TWISTEDHED!

Newsgroup: rec.radio.cb
Date: 2001-05-07 02:43:47 UTC
From: AntiTwistedhed Posse! <posse@com.net>
Message-ID: <3af5fdd3@news2.mibx.net>
Source record: 81167

Here for the first time we reveal the awful TRUTH: we actually take our orders from Dave and Debby.

Don't believe us?

* Count the number of exclamation points after Dave's signature. It's a clever code. Depending on the number of exclamation points, it tells us what to do next.

* Bible quotes. When Dave quotes the bible that is also a code that tells us what our next move is to be.

* Notice Dave and Debby NEVER post when N8, Leland or Sparky are posting.

* Notice Dave occasionally forgets to punctuate? How about the use of capitals at the end of a sentence? And what about the number of times he uses the word "the"?

* Have you ever seen any other user at "truth.com"? No. Because it doesn't exist, except as a cover. Check the paths. You will find they eventually lead back to Aol, Cet, newsranger, and mibx!

* Count the number of letters in "Dave or Debby". Divide by 2. Multiply by 33.3. Nuff said.

* Dave's posts are "a little too crazy" to be for real. It doesn't take a genius to figure out that they are written by a team of copywriter hacks who often make mistakes.

* Ever heard Dave or Debby on the air? No? Guess why. Because there IS no Dave and Debby. No record of their business. No one who knows them or who has actually seen them. They are a false front for "Mr. Big".

And these are only a FEW of the obvious points. Dig deeper and you will find many more. Of course we are depending on Twistedhed to do exactly the opposite of what we tell him. If we say right, he goes left. It's as dependable as the sunrise. Therefore...

..DAVE AND DEBBY ARE THE KEY TO THE VAST CONSPIRACY! EXPOSE THEM AND YOU WILL UNCOVER THE TRUTH!

Hey!,

This is to the person who was asking about Meters? {I Think or was it something else}????.

Meters: An outdated unit of measurement used for individual world band segments of the shortwave spectrum. The frequency range covered by a given meter designation--also known as "wavelenght" --can be gleaned from the following formula: frequency(KHz)=299,792 divided by meters. Thus, 49 meters comes out to a frequency of 6118 KHz--well within the range of frequencies included in that segment{SEE
WORLD BAND SPECTRUM}. Inversely, meters can be derived from the following: meters = 299,792 divided by frequency = (KHz).

See thats what people don't understand a speed limit is a maximum not a minimum.

It should go like this

55 <55 <<55

not

>>55 >55 55

People hitting 70+ should be the ones getting off teh road and having their heads checked.

No it's for revenue enhansment. The cities need the money and most
cities use "traffic" for generating money as a lot of it isn't paid
for by residents. GOD help you if you violate in Royal Oak,Mi as they
have a brand new court bldg that is NOT paid for! Royal Oak police
allowed a video to be made once and it was broadcast, the sargent is
giving the beat cops hell so they will PRODUCE more. $$$

WHY? Do you believe for one second that the speed
limits on American highways are realistic? Do they have
any resemblemce to reality. Is 70 mph across Kansas
logical when there is visibility to the horizon, light traffic
and not a bend in the load for miles ahead?

Cheers,
Bill K2UNK

The intrastate highways were engineered for 70 mph even in the city,
and I do miss the days of "no speed limit zone". Problem is with fuel
economy, doing away with frames, lawyers and millions of idiots who
can't control there machine at speed.

More things that make you go hmmmm....
Lets see.... Gay Doug and Aaron Boobner both post
within 10 minutes of each other, when Boobner hasn't
been heard from for ages.
Curiously.....check the message properties on both
messages. See anything interesting?? Sloppy work
Douggie.
And...."Nobody has ever seen a picture of me".
Yea right. Your pics were seen by all when you had your
famous "Before and After" shots on you web page. You
never knew when you put them up you'd piss as many people
off as you did and didn't consider the repercussions.
Furthermore....."My wife will be with me" at the Dayton fest.
Hee Hee Hee. I would almost be willing to drive the 200 miles
out to see what the "thing" you call a wife looks like. My money
says you got some transvestite or some nasty fat wench that
nobody else would want. I also wouldn't mind seeing a certain
ex amp maker stomp your ass.
Mr.K

The "H" is capitalized, being a person's name, as in:

"1 kiloHertz (kHz) equals 1,000 Hertz."

Cycles Per Second was changed to Hertz to honor the founder of Krispy Kream donuts. xxxxx no, wait. Hertz had something to do with the early days of radio. That's it.....he was the first person to order a donut by radio.

>something else}?????.

We'll never know, I guess. Or will we????? (grin)

>Meters: An outdated unit of measurement used for individual world band
>segments of the shortwave spectrum.

You just are a fountain of information, aren't you, Lennie? First you tell us about "Hertz" (and conveniently omit the part about donuts). Now you describe Meters as an outdated unit of measurement. (sigh).

Here's the real story:
The meter is a unit of measurement in the Metric system. One thousand meters is a Kilometer, and that's what's on road signs and auto speedometers throughout the world. (Sorry, USA readers--in addition to not knowing how to display distances, you drive on the wrong side of the road--chuckle).

Radio has its roots in science, and science likes the Metric system. Therefore, early radio "channels" were described in terms of wavelength, rather than frequency. For example, the International Distress Frequency was set as 600 meters, rather than 500 kilocycles. Broadcasting stations followed suit. Using Wavelength made sense, since it relates to the length of an antenna for optimal performance.

Frequencies below 200 meters (1.5 MHz and upward, in today's terms) were considered useless and were given to radio hobbists so they would get out of the way of "real" uses of radio. Surprise, they found out that 200 meters and down was far from useless!

Today, international broadcasting and amateur radio still make use of the wavelength when referring to portions of the spectrum. For instance, 30 MHz is 10 Meters, so that is the term applied to the ham band between 28.0 and 30. Citizens Band frequencies are slightly lower in frequency, resulting in a designation of 11 Meters.

Remember that the two designations are inversely proportional. As the frequency goes up, meters goes down.

>What is the best handheld to use in a Jeep and with which magnetic mount
>antenne? Any suggestions for a "mobile handheld" setup will be greatly
>apreaciated.
>
>

With Radio Shack doing a close out on a full power CB at $30, why would you mess with a handheld in a Jeep?

You can hard-mount the CB on (or under) the dash, and use strong connectors to the antenna. Handhelds will give you constant trouble at the antenna connector. And you have to hold it in your hand--not the best situation in a Jeep operating in rough country. (And we assume that's why you want the CB).

QRM

PS: Thank you for capitalizing the word "Jeep". It is a registered trademark, and the owner of same takes the capitalization seriously!

Didn't place this weekend, but some great DX off the boat running only an Antron and modded out Galaxy that was given up for dead. The Kings were hitting strong as were the barracuda.. Sunday morning we had a run of amberjack from about 4:30 'till sun-up. Heard South Wales come in about 11: 30 PM EST Saturday night on 38 low and hung around for quite awhile. All kinds of international skip on 555 and nearby all day Sunday. Have to do it again next weekend. Tagged Booty Snatcher, Black Moses, House of Pain, Too Sweet, and a few others on the bowl.

WOW, KC8LDO, you have been busy posting about me. Amazing I have my own cult, but you as headmaster? Leland, I do not know what sent you into another childish rage directed toward me this weekend, but it comes of no surprise that you assail me the minute my back is turned. Seems everything coming out of your mouth these days is lying contemptuous venom and disdain. Reminds you of the days when you went by "Jitterbug" on the old cb, eh? You don't upset me in the least, so have at it.

The only shred of truth in your many posts concerning me this weekend (forged and otherwise) is the fact that I sent you one single email long ago (at your request) concerning the indentation because you asked me if there was a way to tell my posts from the forged posts. I also made you aware at that time that I posted nowhere else but this room. Ha. Little did I know that wicked Leland was at work. You violated that the next day. Forgeries of me in hammie rooms, indented forges here...

The rest of your trash is forged headers, and as usual, lies. In any event, you have ridiculed yourself again in front of the masses. You have threatened the group, threatened me, hurled obscenities at me, accused everyone that doesn't agree with you, and finally, lied to everyone, including my ISP, and as usual, just tried raising a cloud of stink, to no avail. As you see, you were wrong again. Not only did my ISP notify me that you complained, (What exactly did you think I did that was in violation? You mentioned forging, oh, but wait...you lied) but once they were reminded of the case number I have against you from the first time you harassed/forged me and they saw your posts, well, shucks Leland....case closed. Do you make an effort at being wrong all the time?

You will not control this ng Leland, no matter what you try, you can not censor truth with more lies or by your false accusations. You can not censor speech. You will not blackmail the group into anything, and you will not force me to go away with your lies and forges of me and remote phony complaints and you certainly do not intimidate anyone. You will not blackmail me or anyone on this group. Deal with it. You don't like the radio talk? Ba-Bye.

You were caught and I exposed you. Learn to live with it. A word of advice for you and Sparks....in the future, y'all ought to keep your posts radio, mods, and DX related...stay on topic..ya' know? If y'all care about the integrity of the ng, I suggest you put the rest of the group above your personal feelings you are unable to control, and take this flaming you are so fond of to email. I will not reply to either of your blatant childish cries for attention again. You and Sparks' ludicrous, false accusations, outright lies and personal attacks against many in the cb and hammie groups are well documented. Considering the source, it is of little wonder only phony nics reply to you two.I suggest you find a creative way to deal with your anger. Radio and ngs are not your forte.

Hi!,

All info I gathered about, Megahertz & Kilohertz is from the current issue of Passport to World Band Radio (2001).

If you have Passport to World Band Radio (2001), Check out the section Weird Words - Passport's Ultimate Glossary of World Band Terms and Abbreviations {Starting on page 410, 412 has the info on Kilohertz and page 413 has the info on Megahertz}. I may not have all the answers,but at least I try to help people out, with what I do know.

Lennie

)
Yep, it is. I encourage ALL CB people to stay off 28.0 mc & above, and I tell ALL MEANIE 5th collum Soviet Hambos to stay off 11 meters!!!!!!

Yea, good words of advice. If this ng is any indication, it would appear there exist more hammies on eleven than cbers on ten.

> ago (at your request)

Just another one of your lies. As everyone can see you sent me several
E-mails. I have more that I did post yet. Clearly from you.

> concerning the indentation because you asked me if
> there was a way to tell my posts from the forged posts.

Again this is just another lie. You send me that E-mail unsolicited. I never
asked you to provide any information. Of course with all of the hate
postings you made you could just as easily have send a copy off to Doug by
accident. Click the wrong button, etc. That would handily explain things
too.

> I also made you
> aware at that time that I posted nowhere else but this room. Ha. Little
> did I know that wicked Leland was at work. You violated that the next
> day. Forgeries of me in hammie rooms, indented forges here...

You want me to post the E-mail conformation I have from one person whom you
gave my phone number to, after responding to the phony ads? The E-mail
addresse the request was sent to was twistedhed@webtv.net. It's plain as
daylight in the header. Or didn't you count on getting nailed like this? And
please don't try to tell the group that E-mail address belongs to Doug. We
all know better than that. This is even better than posting the ads because
you responded by E-mail, YOUR ADDRESS, with the phone number. There is no
way that could have been done by anyone else that you.

> The rest of your trash is forged headers, and as usual, lies. In any
> event, you have ridiculed yourself again in front of the masses. You
> have threatened the group, threatened me, hurled obscenities at me,
> accused everyone that doesn't agree with you, and finally,

None of which you have proved, nor can you ever prove it either. And let me
outline why that's the case, and why your so screwed up. I can only post
from two different domains. The one you will find used on this post, and the
one used on the other rather long post addressed to you. The second thing
you will notice is the difference in times the posts are made. Posts made
between 8 AM and 5 PM EDT are from the domain used in this post. All others
are from the other one, unless I worked late, which I almost never do. The
reason this is the case is I am posting from behind a linux based firewall

at my work QTH so I have to use their connection to the Internet. The other posts come from my home computer using the cable modem. Any posts that appear to be mine with a mediaone in it, between the times I mentioned above ,are physically impossible for me to have made. Like wise any posts made outside of the above time frame that does not have a mediaone in the path are also physically impossible for me to have made. Those are the first of several huge clues you have so often ignore in your hate filled mind set. There are others. Like I said Twisted you can't read a header to save your life, much less the low opinion people have of your ability, so I would have somebody who knows much more than you do look at the headers from now on. Otherwise all you do is continue to embarrass yourself with your ignorance. I think the news group is sick of your constant screw ups as well.

Finally some closure. "for every action there is a equal and opposite reaction", if you dont respond to the nonsense then they will get bored and go away. It may take awhile but eventually they will. And if they take it upon themselves make it a personal life long vendetta to continue to post rhetoric, then so be it, they will be wasting there own time not ours. We can sit back and read the post and think to ourselves, "FOOLS". The old gang has not gone anywhere, they still frequent the group, read the post, and are waiting for all this to blow over. It like the CB radio, all you got to do is turn it off, it will ALWAYS be there, it aint goin no where. When you decide to turn it back on most the mud ducks will have been there and gone.

I am surprised you are only allowed 40 channels, no wonder there are so many freebanders.
It took the UK over 10 years to give us 80, mind you only FM is allowed.

The article he wrote for the on line magazine looks like it was written by a high school drop out. And this was "professional" writing? He can't even get his own thoughts organized, much less his writing. If anybody paid him for it, they got robbed.

Yeah, and many irrisponsible CBers running power, and generating RFI, give Hams a black eye too. We have to have a balance point of view here.

> Besides most pc's from the 90's will generate more interference then the
> average cb base rig.

That depends on if you have a type A or type B enclosure. Use the wrong one in a home setting, and that could be true. That happens when somebody who doesn't know better builds his own computer. The non RFI proof case is for use in a business setting only. Since they are cheaper (RFI proofing a case costs money) some idiots use them for an at home machine. Then can't figure out why nobody wants the computer on when watching TV, or enjoying the stereo.

Here we have twistie preaching about truth, integrity, staying
on-topic, flaming, self-control, anger-managment, lying, personal
attacks, and false accusations. Oh yeah, and he also makes a comment
about anonymous posts. This change in attitude comes as no suprise,
because he has now been positively identified.

I had no intention of discovering his identity, but then I received a
few emails with several suggestions. Some of those suggestions
included such possibilities that he was really a ham, that the nic
'twistedhed' was an anagram, that he really didn't live in Florida,
that he was actually a teenage punk, etc. A few of those suggestions
caught my interest, especially when I read posts by twistie about how
he thought he was this high-and-mighty journalist for several
publications. A couple of those suggestions panned out, and it took
very little effort to verify the results.

But the problem is that now I am torn between disclosing some facts in
order to knock twistie back a couple rungs on the ego-ladder, or to
allow him the opportunity to learn how to behave like a normal human
being. He has already given his opinion that harrassment is nothing
more than free speech, and in doing so has given anyone the green
light to post anything about him. My other concern is that there may
be others that would read the info and begin an unethical pursuit of
twistie without regard for innocent bystanders (that ain't my style).
So for that reason I will withhold this info for now, but reserve the
right to use it as I see fit.

In the meantime, twisted, I will continue to challenge your bs
wherever you squat. Your other identity/identities will be countered

with those of my own. In a way, I really hope you are stupid enough to ignore this, but in another way I don't. So it will be your future posts that will make up my mind for me.

>
>73 de G3NYY
>
If they can overtake you on the wrong side, then you have NO business sitting in the middle lane. There are no 'slow' and 'fast' lanes on British motorways. The Rule of the Road applies - you 'drive on the left and overtake on the right'. If lane #1 is clear, you should use it, no matter how fast you are going (provided that you are not constantly having to move into lane #2 or #3 to overtake). It is not your job to try and be a policeman, and create an obstruction by driving at the legal limit in the middle of the road.

Anyway, Walt, you used to ride a motorcycle. We car drivers KNOW that motoring laws don't apply to motorcyclists. When did YOU ever stick to the speed limits???
Ian. ;*)

PS
I think that the UK motorway limit should generally be 80mph (but rigourously enforced) but, in built-up areas, as low as 10mph where conditions call for it. Unfortunately, in the UK it is very difficult to put in place a limit of less than 30mph (I think it takes an Act of Parliament, or even an Act of God).

It still doesn't excuse his sloppy writting. He would do well and hope that nobody else finds it to read. One look at the article is enough to set it to the "round file" along with any idea he knows how to write.

Oh, before I forget. Here is the E-mail I mentioned where Twisted is handing out my phone number after people contact him. This was in response to the fake for sale postings. The "****" are there to protect the identity of the person who supplied me with it. I was asked not to divulge his name. I'm keeping the promise I made.

CAll 248-589-0839 ask for Leland.
==========
So I called the number and got your answering machine.

Now, from this I would think you MIGHT be able to get Webtv to drop a rock
on their kid.

I haven't got any more information than this but if there is anything else
I can do I would be more than happy to assist with this.

If you would like to file the first complaint with Webtv and then give me
the tracking number I would be happy to file a supporting complaint with
them.

If you get more calls I would encourage you to get them to file the same
complaint with Webtv. With a group of us it looks like we could easily
get this kid thrown off Webtv. And with an identity we could get him
marked in a variety of different places.

Thank you for helping combat fraud and spam on the net

My apologies for bothering you, let's make a project out of him.
****
^^
^^^^^^^

Now doesn't that just beat all Twisted! Hummmm.... Now that does raise several disturbing questions. Number one, you posted the for sale ads, and you sure as heck responded to one inquire by sending a message back using my name and phone number. Second, Doug posted them, but if that was the case then why drag me in to it if I didn't have anything to do with the posts? Could it be that you and Doug are working together? Finally third, you're so screwed up, and can't figure out how to read headers, so you just blindly pick anybody to blame. But we all know that number three can't be the case Twisted, because your such a whiz at reading headers, and you never make a mistake, right? The same goes for number two. Twisted, between you and Tim, you guys make a great circus act.

Really Tim, you sticking up for Twisted. He can handle things just fine on his own. You want to hang around and come to his rescue is really not something I would expect from a person who claims to be as smart as you do. The two of you hanging together just reminds me of the leading characters in that movie "Dumb and Dumber". Come on now. Tell us which character was Tim Nepo in costume. 8-))

Hi everybody,

I just figured I give everybody the heads up on the new Galaxy 40 channel base station. It appears to be very nice and would make a handsome addition to any shack. I'll provide the link below. I got this look from Panther Electronics, good prices and GREAT service.

http://galaxyradios.com/2547.html

Well think of the logistics. The average officer gives out what 10 tickets a day around 75$ a pop. 750$. Now his salary is 240$ a day. He will probably pay 50$ in gas for the touring he does. Administration as well is probably another 100$. So figure after all that he clears 350$. That is being very generous. In bumwad idaho (not an insult just my way of saying nowhere) they proably have 2 cops out per day and chances are they will split those 10 tickets between the two since population is small. Now the police pay 800$ a day for that 750$ income from tickets ... tell me where that makes sense that they do it for the profit ?

> Not idiots...just common evryday people that recognize BAD
> law when they see it and act accordingly.

Tell me how its a bad law ? People speed, simple physics will tell you that that increases kinetic energy and momentum thus increasing stopping distances. People already don't leave enough room at the slower speeds and keep the same distances at the faster ones. So not only were they doomed from the start before they started speeding since every accident that could happen with buddy in front would result in them being involved, but, now their stopping distances are even greater and they will impact with a higher velocity.

> logical when there is visibility to the horizon, light traffic
> and not a bend in the load for miles ahead?

First off its law. You hams don't like those cb'ers breaking the law because of some little arbitrary thing like needing a licence to operate (having the sheet of paper does not make you a better op) but yet you find the "arbitrary" speed laws rediculous? They are there to lower the risk of accidents. Car's do not handle as well at the higher velocities, reaction times are required to be far faster etc etc etc ... They do have engineers and such who do determine hte maximum velocity that is safe on a particular road given its conditions or give it the max of 55 (its 65 now isnt it ?) since that is about what the average driver can safely handle.

Yes, he does deserve it. But by looking at the email I have gotten
over the past month, there are a lot of people that would like to do
much more than what he deserves. I won't be part of that. If I ever
choose to use this info, it will probably be to identify him to the
FCC or another LE agency. Sorry.

Bert,

Why would CBers using the legal 40 require a display that showed their frequency
in mHz/kHz?

My suggestion would be NOT to use a handheld CB. The antenna and ground system are VERY inefficient. You are likely to get more range (even without interference) on FRS.

Hmmm ... Aaron. You know, I have met folks with unusual names. Usually, however, they have parents, cousings, aunts, uncles, children, grandchildren, whatever. Do a search for 'Voobner' and it tuns up nothing (for the whole United States of America). I am beginning to believe that there may be only one individual behind most of the mess (maybe two).

73 from Rochester, NY
Jim

> Thanks in advance.

Can't say specifically but the general approach is to move the channel selector 450 kHz per notch on the range switch. Assuming that C is the usual 26.965-27.405, then D is 27.415 - 27.855 and E is 27.865-28.305. As this is 45 channels and you have 40, we will assume you get the RC channels a different way.

I'll let you do the math but most of E is in the ten-meter ham band. To top it off all but E40 is in the narrowband allocation where a phone signal stands out like a beacon. Incidentally, the amateur convention on ten is USB so LSB sigs draw a lot of attention as well. At 3 grand a pop, you don't need the attention.

Use your own judgement, you will anyway. Make it good judgement.

It is bad law because people do not want the government
telling them how to live their lives and to what degree of
risk they can/should afford themselves. No one is mandated
to drive 70 MPH. If you don't want to drive a that speed,
then don't.

>People already don't leave enough room at the slower speeds and
>keep the same distances at the faster ones. So not only were they doomed

Sign up with the Naderites then and push for a rollback
of highway speeds if you feel so strongly about it.

>The intrastate highways were engineered for 70 mph even in the city,
>and I do miss the days of "no speed limit zone".

They were engineered for 70 when cars of far less technological
ability as to road handling were the norm. I-70 across Kansas
could easily sustain speeds well over 70 today even though the
road itself was engineered years ago.

>Problem is with fuel
>economy,

Fuel economy is an issue that impacts only ME. It is
none of the gov'ts business if I drive in a manner that
costs me fuel economy.

>doing away with frames,

Actually, todays "frameless" cars are better than those with frames in
the same accident.

>lawyers and millions of idiots who
>can't control there machine at speed.

Few speeding accidents ever involve other cars. Most
accidents are caused by non-speeding factors (alcohol,
reckless driving, etc.).

Cheers,
Bill K2UNK

>accidents.

More that they are there to garner revenue.

>Car's do not handle as well at the higher velocities, reaction
>times are required to be far faster etc etc etc ...

If YOU can't handle it, then don't. No one is forcing anyone to
drive 70.

>They do have engineers
>and such who do determine hte maximum velocity that is safe on a particular
>road given its conditions or give it the max of 55

Nope, the national 55 in effect for some 15 years had NOTHING to do
with safety when imposed. Since it has been lifted, highway detaths
per year are STILL dropping.

>(its 65 now isnt it ?)
>since that is about what the average driver can safely handle.

Many states it is now 70 or even 75. In NJ people routinely
drive 70-75 everywhere on the highway...totally ignoring
the posted 55 or 65 limits.

Cheers,
Bill K2UNK

Hi Jamesm
Yes you can expect every asshole in North America to have a CB. They all think that by using a HANDLE that no one can find them, (with the right equipment it only takes 10 seconds) so they cruse the band picking fights. on the other hand there are a lot of good people out there. If someone tries to get you going just turn the radio off. For real jackasses I find that a small portable arc welder hooked to the antenna cable works just fine or a pin in the cable and no more trouble. You will also run into a lot of know it alls that know nothing so be careful of what advice you take. Welcome to the radio.

All well and good sir, but you have not explained why any CBer would want
an alternative to eBay, and furthermore why eBay would cause them to have
the "blues". If you simply wanted to provide an alternative, then "Got The
eBay Blues?" is a very curious headline as it implies there is something
uniquely problematic about eBay and CB auctions. Please explain.

924. A World Without Twistedhed

Newsgroup: rec.radio.cb
Date: 2001-05-08 07:31:27 UTC
From: Is A Better World <sane@green.org>
Message-ID: <3af792bf$1@news2.mibx.net>
Source record: 81218

```
Proposal for a World Without Twistedhed
=======================================

From 2000 to 2001, more than 432 posts were made by Twistedhed.

Twistedhed is not acceptable.

We call for a world without Twistedhed.

We call for a world where choices are not compromised
and where each person can choose a world without Twistedhed

To that end, we propose the following:

* recognition of a culture free from Twisted's opinions

* support for international radio treaties

* general and complete banishment of Twistedhed

* stringent laws to protect puppies

* a ban on all Twistedhed posts

* legal protection for whistleblowers who report violations

for every child, a world without Twistedhed

Still doesn't stop that idiot who is going to end up losing control of his car because he feels he should drive whatever speed he wants (since there wouldn't be any limit for him to abide by) and then crashing into my car. See believe it or not, MOST laws are there for the protection of OTHER people, not the offender.

Ya can't drive drunk under law because you are a danger to others, not yourself.

The amusing thing is ... the laws you do enjoy are exactly that. You know
like: murder, rape, robbery, assault, stalking, etc etc etc ....

The laws are there because the average person is too stupid to realise just
what is good and what isnt

My ability to handle the road is irreevant. Fact is there will be 10 idiots out there that will take full advantage of a no speed limit idea that can't handle the road well at 65 let alone 70+ and end up killing off a great deal of the population ...

> Nope, the national 55 in effect for some 15 years had NOTHING to do

Face it, George looks like a monkey and is dumb as snot. As bad as Clinton was, and as slug-like as Gore was, the republicans are so bad they can't honestly win against them. Think about that!!!!

A top republican in Atlanta that was heading the impeach Clinton movement resigned recently because he was caught (a second time) exposing himself in a public park...and soliciting sex from an undercover policeMAN (not police WOman).

Republicans are more likely to have sex with Yasser Araofat and his male camel than women. Like they did with congressional pages.

How about some technical data proving your claim about republicans not liking to have sex with women? Statements like this cast a 'lot of doubt' about your abilities in other areas, such as electronics etc. I mean this is such obvious bullshit, it makes me wonder if your learned comments on other things might also be bullshit!

And yea, I'm a new republican, got so disgusted with Clinton and company, I changed parties, and I still like women!

I presume you still support Clinton and hold him in high regard. He was such a outstanding example of a President of the United States, wasn't he, ugh! puke! I don't know about you, but I was totally embarassed and ashamed to have him represent us/me to the entire world...!

thats a laugh, doug posted over 160 msgs on just last sunday, all of which
were flooded posts, I's bet my years salary that doug has posted well over
2000 since the beginning of the 2001.
so 432 posts in 325 days isn't all that much it averages to 1.18~ posts a
day

38 LSB is a hopping in my area, I regularly talk to an individual from
findlay, people from defiance, ft. wayne indiana, toledo. and sometimes when
the propogation is working right even longer, which is what makes it alot of
fun.

Hello Lennie: Yep that pretty much the case for the normal people.

But in some technical papers and such, the old guys sometimes will write a frequency as 27 Mc, or as a writing somewhere around 4500 megs so and so will happen. The term 4500 Megs will be asked if this is a frequency, that should be written as 4.5 GHz. The old guys will say naaah, its good enough for who its for.....

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Never said that. One example is Newt. He had an affair with a female
member of his staff before he resigned..

Here is what I said:

>Republicans are more likely to have sex with Yasser Araofat and his
>male camel than women. Like they did with congressional pages.

>Statements like this cast a 'lot of doubt'
>about your abilities in other areas, such as electronics etc. I mean this
>is such obvious bullshit, it makes me wonder if your learned comments on
>other things might also be bullshit!

What is BS about it?

1.) Bush looks like a monkey

2.) We had a problem in the House and Senate with congressmen and
senators having sex with pages

3.) The Republican heading the "let's get Clinton" group was arrested
TWICE for exposing himself in a park and for soliciting sex with a
male undercover decoy in an Atlanta park

>And yea, I'm a new republican, got so disgusted with Clinton and company, I
>changed parties, and I still like women!

Good for you. We really ought to throw all the bums out.

Before someone whines about Clinton, we should insist he not have an
extramarital affair himself. Before someone heads a crusade to
prosecute someone else for banging a 21 year-old-female and lying
about it, we should make sure he isn't "hanging out" in public parks
trolling for young males.

>I presume you still support Clinton and hold him in high regard. He was such
>a outstanding example of a President of the United States, wasn't he, ugh!

>puke! I don't know about you, but I was totally embarassed and ashamed to
>have him represent us/me to the entire world...!

Frankly, both parties embarass me. I'm ashamed of many of them, and
embarassed that people think either party does not have more than its
fair share of dishonest members and even the occasional pervert.

Why on earth would anyone think that a certain party affiliation means
the people are honest or moral?

We let them all get away with far too much.

Now think about this...it is important. As bad as Gore was...and as
disliked as Clinton was....the best the Republicans could do was Bush.
They fielded a candidate that actually LOST the popular vote to
someone like Gore!!!! Phew!

Embarassing, isn't it?

Napoleon Ohio on US 24 almost exactly between toledo and ft. wayne indiana. thats my work location, I live in a small town of 800 between napoleon and bowling green, as of now my home base is off line as my tower was taken down in the storm last night, as part of REACT and the communications officer for the local Red Cross disaster services, I use the base here at the office. We have a realistic Navaho base and some Kenwood UHF radios with licences for the Red Cross and REACT, as of now we are operating the UHF on simplex, we had a repeater donated, but it's been "lost" heh the organization that donated it had it housed at one of the local radio stations broadcast towers, and the radio station is not sure which tower, go figure, the company only owns 4 radio stations in our area heheh. We could have used the repeater last night too, when out as part of the local SKYWARN system, the local ARES club has a base at the red cross office as well so we can communicate with them and they can pass on any sightings. As this system (radio system) is still in the building stages, we are still trying to get the funding to upgrade our equipment, and many of our members, myself included, are working on getting our license, I am looking at going either to delta or toledo the next time they have the exam to take my technicians exam, and if I can learn the code I'll try to take that exam as well. My only problem as I have stated before here and on the vhf-uhf group is that I

have a hearing problem (too many years of abusing my ears playing drums with a band in front of 3000+ people)I am somewhat tone deaf and the tones I have a problem with are the same frequency range as the tones generated by CW, I have heard there are CW keys/generators that have adjustable tones, if I can find one that would kick butt.

I have friends/relatives all over hte us and around the world that are hams, and would love to have the chance to converse with them over the radio, would also love the thrill of trying to dx with low power, who needs amps, is alot more fun to make real dx contacts w/o additional power.

Well I may have 'poor reading skills' but I take issue with you painting all people of a certain grouping with the same paint brush about their sexual perferences...There are wierdo's in any group, but not the whole group, and there is a hellva difference between Joe Blow congressman or anyone else and the President of the United States..No matter what, the President should keep him or herself above reproach in all matters, or at least be decrete about it for crying out loud and then lying about it on the national media, sheesh! To much!!!

As for ....the best the Republicans could do was Bush. They fielded a candidate that actually LOST the popular vote to someone like Gore!!!! Phew!...the last I heard on the evening news was that 'all the big time newspapers' that paid to finish the recount down in Florida, much to their chagrin, finally admitted that Bush won anyhow no matter how Gore and company tried to slant it!! As a note of interest, I didn't vote for either Bush or Gore, my candidate lost out early on....!

> bowling green,

Yeah, I have been in Bowling Green before. There is the huge university on
the main drag through town. I think I went to a local Hamfest there once
too. You can see the football stadium from the highway on the west side. I
also like to go to the Findlay Hamfest. It's one of the big ones in the
area, along with the Maumee, and Fort Wayne ones.

By the way, do you get in to the Bryan Ohio repeater. That machine sits
right on the same frequency, and uses the exact PL tone, as a machine in
Southfield (146.820 PL-131.8) on the north west side of the Detroit area.
During the evening last summer I could easily bring that machine up around
about 7 to 8 PM at night due to tropo. Some times I have gotten as much as a
S7 from that thing using a simple whip antenna. Needless to say it does a

number on the local Southfield machine during those times.

> as of now my home base is off line as my tower was taken down

There is a local Skywarn group that works out of a repeater in Ann Arbor
Michigan to the north of you. Does your group interact with them at all?

> local ARES club has a base at the red cross office as well so we can

The Dayton Hamvention is coming up in another couple of weeks, and they will
have VE testing there. You can take you test and shop for your radio too.

> and if I can learn the code I'll try to take that exam as well. My

If you contact a local Ham club that has VE testing many times they can set
up a special test for people like you with a hearing problem. For example
they could use lets say a lamp blinking instead of audio tones. Some of
these guys will bend over backwards to get you to pass a code test. Make a
few phones calls and see for yourself.

>
> I have friends/relatives all over hte us and around the world that are

Hah, hah, don't let anyone on this news group hear that! Did you see Yaesu's new FT-817 QRP back pack rig, all band, except 222 MHz, all mode? Does 5 watts on 160m through 70cm. Also does digital modes, and CW too. Not much larger than a big paper back novel.

> is alot more fun to make real dx contacts w/o additional power.

Sounds like a die-hard QRPer all right 8->>

Take a hard look at what Dubya is doing/not doing with the oil companies right now, think back to what he had to say about the oil business during his campaign, and then take a look at the the modern Bush oil pricing structure. Now, aren't you proud to have voted for such a guy? I didn't think he could sell out in such a short order, but I underestimated the fool.

For the record, twistedhed writes (as well as he can) for Sporadic
Waves, which is the newsletter for the American Eagle SSB CB'ers Club,
founded and run by Keith Herzig, KC5LPQ (sporadic1@aol.com,
keith107@msn.com). He doesn't consider this a business, but charges
$15/month for a subscription.

967. May 19-20 you can hear Korean voice

At May 19 - 20 (Sat -Sun), We are going to Expedition to high mountains.
Many CB Clubs in Korea going to high mountain near their home town at same
time (about 19-12 CB Clubs).

We are going to these Mountains.

- Pusan (WhangRyung Mt. about 500 m)
- YoungChun/KyungsangNamDo(BoHyun Mt. about 1200m)
- Taebak/KangWondo (Hambaek Mt. about 1500m)
- ChunAn city/ChungchungNamDo) (Heuksung Mt. about 450m)
- Daejun City..
- Seoul (Namsan)
- Paju city/KyunggiDo (Bongseo Mt.)
- Asan city /ChungchungNamDo (YoungIn Mt. about 500m)

ETC..

It is an unforgettable experience to you.
We called "BongWha" QSO this events .
The "BongWha" means a signal fire top of mountain to mountain.
How about you?
If you want to join us.
at 19/ May - 20/May.

The frequency of BongWha QSO events is CH6 / FM.
or Call ch 14(27.125Mhz / FM)
We use a virtical type antenna (GP antenna) and 50-100W Power.
But we QSO only Korean language.

Thank you and have a Nice day.

Cuby / 100SD103
The soorisan CB Club in Korea

You are correct there Jerry as much as they cried and whined Bush still came out on top after the Newspapers finished counting. Tom by what percentage did Bush lose the popular vote? Pretty miniscual wouldnt you say. Last time I looked this country elects presidents on electroal votes. Since the democrats had dead people voting and convicts perhaps we should have a recount .

Hello Skipp: Thanks for a great web page.

I have down loaded the manual, I have several of these radios but didn't have the diagrams. Now I can trade and sell with the diagrams. Thanks a million.

I wounder if Bob's web page is still up showing all the General Radiotelephone and Browning Radios. I'd give it a try.

We are not Doug. We are a volunteer community group with national ties to such organizations as Greenpeace and the Sierra Club. You may not be aware, but Twistedhed is considered the 3rd biggest environmental polluter, right behind toxic chemical dumpers.

We understand that you used to post hateful poetry under the name of "Dr. Kevorkian" (anyone remember that?) so you are one to talk about "growing up".

Sporadic Waves is $15 for a one-year subscription (6 issues), NOT $15 per
month. Do you know if Twistedhed writes a regular column for Sporadic Waves,
or if he is just a one-time contributor? In my opinion, Twistedhed's writing
is plenty good enough for a "homebrewed operation", as Keith Herzig
describes it. Read for yourself at http://sporadic1.tripod.com

Skipp,

(sigh) We have been thru this crap with you before.

Your page encourages unlicensed use of Siltonix ham gear on 11 meters. Like all criminals, you carefully avoid actually verbalizing such encouragement. This only makes it, and you, more sleazy.

UC Davis ought to know you are using their resources to advocate violation of federal law.

Your pals,
The AntiKeyClown Group

We work with that SKYWARN group yes, and yes I can pick up the repeater in williams county, also fultan county and henry county, the one in henry county is part of a linked repeater network that runs from tennessee through michican (from what I have been told or my addled brain can remember, I may be wrong). Several of the local hams/ARES/SKYWARN are personal friends of mine, heh you might call them elmers.

When I first got on cb as a child I used to talk to them on channel 13, I lived in McClure (still do) and used to talk to coon hollow drive ,thats between napoleon and the triving metropolis (hah) of Florida Ohio, (interesting trival fact, napoleon ohio sits exactly between florida and texas, look at a map of N.W. Ohio along 24 and 424 along the maumee river, another useless peice of information, the bridge in grand rapids ohio that connects US 24 and St Rt 110 is the shortest highway in the US. I can't remember the exact number assigned but this bridge was assigned a highway number, welcome to the wonderfull world of ohio, where it is illegal to fish for whales except on sunday, and where it is illegal to catch mice in cleveland w/o a hunting license). Enough rambling heh, as I was saying I used to talk to all these people with a 23 channel Alaron mobile radio hooked to a power supply, with a 4 ft fiberglass whip mounted to my desk in my bedroom. The first time I made contact with someone other that the truck drivers going past my house on U.S. 6 I was thrilled, the thrill remains to this day. Anyone can talk across the US on cb with a amp, but thats not thrilling to me, I have

talked all over the US on legal radios, and it wasn;t because I was trying to, someone heard me calling and broke in, and amazingly they were from georgiaa, florida, texas, even made south america, iceland, and uk on 38 LSB on a barefoot radio. These people locally I have talked to, and have gotten to know are great people, one owns a local radio,communications shop. Others I have met when I used to invite some of them over to my shack for coffee, we used to meet at least twice a month for some face to face talk, drinking coffee, and helping eachother solve our problems,compare radios/antennas. A few of these people did have "export" radios, but they have given them up and returned to regular radios, or have moved up and gotten their ham tickets, and even the local amateurs whle knowing and talking to these people with the "export" radios, instead of bashing them, worked with them, and encouraged them to go legit, and you also never hear any of the local hams do the code/nocode fighting/insulting. It all boils down to one thing, the love for the hobby, once it is in your blood you can't shake loose from it. It's a shame that the spirit of cooperation can't work here. And when I do get my ticket, I will still talk on CB, I will still talk to my old friends, I have heard of too many hams that once they get their ticket they turn their noses in the air and turn away from their old friends, enemies are easy to make, making good friends is not.

I haven't played dick tracy on anyone I said post twisites info. I am not trying to be anonymous like you. If I was I know how to play ball. Why can't I create new names You know they are coming from me what's the big deal am I locked in with only 1 name? Will I for ever be known as badabing? how can I shake it.

ever see a cobra 148GTLF? is a legal type accepted CB radio and has a
built in freq counter, so did the Cobra2000GTL and some other fcc type
accepted radios, so whats the big deal? some peole like to have all the
bells and whistles, take the cobra radions withthe nightwatch. heck look
at the truck drivers with all the lights on their trucks, why? they
think it looks good. Who's to say if I ever meet with you that I'll like
your equipment? does thag make y6ours bad? no it's all about preferance,
if it's legal whats your beef eh?

We all know those disclaimers are a bunch of horsecrap and if anyone at
davemade or exportradios etc think otherwise they are sadly mistaken.

No my meaning of ball was I know how to play the game of being anonymous
just like you. As far as Cb's go there are many rules Have I ever said any
different, have i said to break any rules ? I am sure you'll research it and
let me know.

yes but will i find it in another post like this
swizzle=badabing=roughrider=helmut sweenie ? And will you still faithfully
refer to me as bing or helmut ? I mean really which one would i really be.

You ARE a kidder, aren't ya, Jay. Word is you are really a pocket-protector-nerd-tech-ham
in real life and this whole 'rock and roll redneck' thing is one big put-on.
Worst thing you ever done was time out the local repeater.

>in mHz/kHz?

Why not? My old Cobra 2000GTL had a frequency counter. Legal 11 meter enthusiasts enjoy a handsome set-up just as much as the next guy. I certainly see no problem with it. As a matter of fact, we didn't even refer to channels, just frequencies...and our rigs were bone stock legal. I think this rig would look just fine next to my Yaesu FT-840. Hope that helped you out.

Im surprised as a shipper and reciever you don't use cb
Lets see um ok
Pabst uses 36
Quaker uses ch2
Perrier water uses ch24
RichFoods uses ch11(VERY Bad Move BTW)
Every descent warehouse and distribution center with more then 30 or 40
docks use cb.

Kenneth we only have about 100 docks and are the largest grocery distribution centre in BC Canada. The short hall trucks use Trunked VHF and all of the Can and Long Hall drivers just check with the Yard Hustler or call on the cell-phone. The Long Hall drivers say that when on the road they use FRS with no interference, no skip and during high skip cycles FRS has farther range then CB. I guess that the US is just behind the times but what else is new.

(Usenet News) In an accord reminiscent of the Western Allies and the Soviets during WWII, Keyclown and AntiKeyclown factions today took the first steps to aligning their separate forces to crush the hated rec.radio.cb newsgroup troll Twistedhed.

(photo of BadaBing shaking hands with AntiKeyClown Colonel)

Notorious NJ Keyclown "BadaBing" said of the treaty, "Twisty is a dickhead. The sooner we bounce him, the better. If it takes an alliance, so be it. Kapeesh?"

Joining BadaBing in action with the AntiTwistedhed Posse will be Helmut Sweenie, Rough Rider, and Big Poppa Pump.

I don't want to see this point go unchallenged. The vote
in each state is completely tabulated. To say otherwise is
supreme ignorance. Every vote was counted, and was
submitted. It is a fact that Gore won the popular vote, but
it is also true that this is immaterial to winning the Presidency.

Americans do not vote directly for President. They vote for
Electors. The candidate with the most Electors wins. The
popular vote is an interesting count, but has no bearing on
the Presidential election. It is equal in importance, to the
count of voters complaining of constipation, in relation to
those who have syphilis.

Finally, Bush won the Republican party because he had the
most money. There were other good candidates, but Americans
froze them out of the process by not contributing to their
campaign. Both parties received a fraction of the total votes
possible. More than 50% of voting age Americans never went
to the polls. These same 50% always whine about the result.

Yawn....this whole line is a bore... you win Tom, have a nice life with old blow-job BillC!!! I'm gone...!!!

de Jerry -n6jp-

>Your sense of humor sucks as bad as you sense of perspective.
You need to get a life away from thinking Republicans are better
than anyone else..or more moral.

Although it was intended as sarcastic humor, you must be aware
the Republican in Atlanta heading the "crusade" to get Clinton
disbarred for having sex (or whatever) has resigned because he
was caught a second time exposing himself in a public park and
soliciting a young male undercover cop for sex.

Where is Newt? Gone, because he was poking a woman on his
staff.

Frankly, Republicans and Democrats are both very poor examples
of what out public servants should be like. Now go away and stop
bothering me with this silly "Republicans are moral" crap. You can
pretend whatever you like, but don't fault me if you don't like the
>facts.

Oh, it wasn't up to him. It's just that his "friends" in the oil business know that he'll never use price caps nor controls. They couldn't care less that the extortionary oil price increases will be cause of Bush being evicted in four years. No matter- their additional billions will already be banked and Bush will be fully expendible and ousted at the polls, the economy trashed by universal inflation caused by the fuel price increases which impact *everything*.
So in the midst of record high profits by oil companies, and no sign of anything approaching a REAL shortage of petroleum products, just that allegation by those making the profits, prices rise to record levels (by collusion, no doubt). Nary an 'Out of gas" nor "limited to 10 gallon" sign to be seen (as in '73 when there was a REAL shortage).
Just today, radio news sources "within the oil industry" say that now the pipelines are again full, the 'shortage' is abating, so prices should start to come down, "Except on the West Coast and Midwest where there are special circumstances".(?) Of course, "down" will be somewhere around $1.50-1.75, which was exactly the objective of the entire exercise- get the prices up without just raising them "arbitrarily". (gotta have a 'valid' reason.) Fools that the pubic are, they'll never know what happened.

Sure wish we had a real political party in this good ol' USA. The Demoncrats turned out to be fools and the other side, crooks. Oh, the Clintoon admin. was able to work it both ways.

Twistedhed's writing is "plenty good enough" for a home-based
newsletter, but I wouldn't spend money to read it. Twisted praises
himself to be a 'journalist' and claims to write for many
publications. The noted example of his writing ability falls woefully
short of his self-perceived greatness. The article is nothing short of
a controlled tantrum. If you are a radio pirate that enjoys reading
that kind of crap, by all means subscribe.

Or maybe the reverse. News reports (not generally reported by the liberal part of the media who almost universally supported Gore) say that millions of absentee ballots were NOT counted, ever, some 3 million in California alone, simply because they could not affect the outcome in the state in which they were cast. Absentees historically favor conservative candidates. So it could easily be that the popular vote is never going to be known accurately.

And you may ignore another fact, if you wish, but I live in a state where the Democratic machine routinely steals elections in metropolitian areas, and gets away with it. So it happened this time, too, with plenty pf press coverage that wss unavoidable under the circumstances, and do you *really* believe that the Democratic administration installed by that fact will proceed to do a proper job of investigating?

It was OK for you ANTIKeyClowns to post PROFANITY to anyone who supported legal CB, wasn't it?

BACK THEN...

It was just FINE for you ANTIKeyClowns to make THREATS to people who disagreed with your "outlaw philosophy", wasn't it?

BACK THEN...

OH yeah... COMPLAINTS WERE MADE TO ISP'S BACK THEN about "profanity" or "off topic" posts....remember now Doug?

BACK THEN...

BUT

NOW

..the shoe just got kicked up DOUG'S ASS, and all he can do is

CRYYYYYYYYY!!!!

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!

It was OK for you ANTIKeyClowns to post PROFANITY to anyone who supported legal CB, wasn't it?

BACK THEN...

It was just FINE for you ANTIKeyClowns to make THREATS to people who disagreed with your "outlaw philosophy", wasn't it?

BACK THEN...

OH yeah... COMPLAINTS WERE MADE TO ISP'S BACK THEN about "profanity" or "off topic" posts....remember now Doug?

BACK THEN...

BUT

NOW

..the shoe just got kicked up DOUG'S ASS, and all he can do is

CRYYYYYYYYY!!!!

I have no problem with DWI laws. I do have problems where
speed limits are set lower than anyone rationally drives. I have
never suggested allowing unlimited speeds...although there
are certainly highways in the west that can and have had
only "reasonable and proper" as the limit.

The problem is that the safety nazis want everyone to abide by
their version of what is or should be safe. None of that
crowd trusts anyone as an individual.

Neither did Clinton, gaining only about 43% of popular
vote when he was first elected and something like
48/49% for his second term.

As others have noted, the system that counts is the
electoral college process...and that's not likly to change
because smaller states end up with diluted power if
the electoral college ended.

>of the population ...

The statistics are totally contrary to your claim. Highway
deaths continue to go down each year inspite of increased
speeds...70+ on many western highways as the posted limit.

>> Nope, the national 55 in effect for some 15 years had NOTHING to do
>> with safety when imposed. Since it has been lifted, highway detaths
>> per year are STILL dropping.
>
>What source did you get that info from?

National Motorists Association. Indeed, this has
been reported almost every year when the stats are
announced. It is something the lower speed limit
proponents hate to hear.

>> Many states it is now 70 or even 75. In NJ people routinely
>> drive 70-75 everywhere on the highway...totally ignoring
>> the posted 55 or 65 limits.
>
>And New Jersey (Joisey I should say) is a state to model after?

NJ highway deaths have gone DOWN also. The reality
is that NJ is probably in the middle to low end of state
speed limits as many states have 70 and higher limits with
concurrant higher average speeds.

And Kennesaw, Ga, which has a law requiring every house to
have a gun, has the lowest crime rate of any city its size
in the country. The crime rate dropped 89% after the passage
of that law.

> encouraged them to go legit,

Sounds like the few "coffee breaks" I have been to. Half of the guys are
Hams,
the rest are CBers. The Hams are trying to get the CBers to dump their
export rigs, amplifiers, and get a Ham ticket. Just about every Ham at those
coffee
breaks are ex-CBers themselves. There is always a friendly offer to help any
one of the CBers to get their ticket.

There's one CBer I keep running in to, at local Hamfests, who has been
busted twice by the Detroit FCC field office engineers. Several other Hams
know this guy too. We keep offering to help him get his Ham ticket. For some
reason he thinks the FCC is playing a game. I think he made a comment once
where he told us that the FCC said they don't want to have to make any more
trips out to his place. He has been off the air for a long time now, and
wants to get back on. I think he knows what the FCC means when they told him
they don't want to "visit" him any more, and that seems to make him a bit
nervous. They already took some of his equipment already. What got him in to
trouble in the first place was running a modified Ham rig. Seems like it
comes over his neighbors' TV real good. Nothing wrong with the rig, but the
neighbors' TV is a piece of crap. He was told if he had a Ham ticket the FCC
would tell his neighbor "too bad. there's nothing we can do", which is a lot
better than what will happen the next time they catch him.

An man I knew gouged patients enough to buy a farmette in the country. It came with a veggie garden, rabbits and chickens. The previous owner had cruelly kept the rabbits in cages he called "hutches" but the good doctor let them run free. They were (predictably) killed and eaten by his dogs, who at least had enough sense to know what rabbits are good for. The eggs had to be thrown away because the stupid chickens deficated on them! So he got rid of the chickens. He also threw all the root veggies (eg carrots) away; after all who'd eat carrots, etc., that'd been "soaked" in dirt?

Sorry but I don't want people that divorced from reality electing others to pass or enforce laws that I must obey, even if they are basically intellegent. IMHO we should invoke the same laws once applied to slaves and Indians: votes from people living in cities should only count for 3/5 of a real persons' vote.

1092. FCC INSPECTIONS

Newsgroup: rec.radio.cb
Date: 2001-05-09 17:34:42 UTC
From: CB RULE ENFORCER <ENFORCER@YNN.COM>
Message-ID: <3af971a2$1@news2.mibx.net>
Source record: 81540

FROM FCC WEB PAGE

The Federal Communications Commission has the authority to inspect most radio installations. Responsibility for conducting these inspections generally rests with the Enforcement Bureau's Field Agents. In the course of fulfilling this responsibility, the Agents often receive questions concerning the authority and procedure under which they are working. We have assembled this general information sheet to address some of the more commonly asked questions concerning inspections and to clarify why and how inspections occur.

INSPECTION AUTHORITY

Section 303(n) of the Communications Act of 1934, as amended, (Act) gives the Federal Communications Commission the "authority to inspect all radio installations associated with stations required to be licensed by any Act, or which the Commission by rule has authorized to operate without a license under section 307(e)(1), or which are subject to the provisions of any Act, treaty, or convention binding on the United States . . ." 47 U.S.C. 303(n) Both Section 303(n) of the Act, and the Rules which implement the Act, grant the right to inspect most radio operations to the Commission, and by delegated authority to the Commission's Bureaus and agents. The Enforcement Bureau conducts inspections of radio installations as part of the Bureau's function to "[e]nforce the Commission's Rules and Regulations." 47 CFR 0.111(a).

Both licensees and non-licensees must allow an FCC inspection.

1093. FCC PENALTIES

Newsgroup: rec.radio.cb

From: CB RULE ENFORCER <ENFORCER@YNN.com>
Message-ID: <3af973a2$1@news2.mibx.net>
Source record: 81541

FROM FCC WEBSITE

The operation of an unlicensed station, or operation on unauthorized frequencies or modes is a violation of Section 301 of the Communications Act of 1934, as amended. Operators of illegal stations may be subject to monetary penalties of up to $11,000 per violation, seizure by court order of all radio equipment involved in the operation, or court order enjoining the operator from operating an illegal station. In addition, operators could be subject to criminal fines of up to $100,000 or imprisonment of up to one year, or both, for a first time offense.

Source record: 81542

THERE WILL BE SEVERAL AGENTS WITH DIGITAL CAMERAS AND SURVEILLANCE EQUIPMENT TO RECORD BUYS BEING MADE. THE FBI, LOCAL COURTS AND LAW ENFORCEMENT HAVE BEEN ALERTED TO PREPARE FOR POSSIBLE ARRESTS AND CRIMINAL INDICTMENTS.

HAHAHAHHAAHHAHAHA! COULDN'T HAPPEN TO A SLIMIER GROUP OF CRIMINALS.

1095. FS Cobra 148 GTL-DX and Superstar 360

Newsgroup: rec.radio.cb
Date: 2001-05-09 17:50:11 UTC
From: Syd <sa1@ukonline.co.uk>
Message-ID: <9dbvuvdun1@plutonium.btinternet.com>
Source record: 81399

I have the Cobra 148 GTL-DX MKII and the Superstar 360 for sale, they are both in excellent condition and they both cover 26.000MHz to 30.000MHz all modes and alpha channels, UK/Cept CB straight line 40. Both have the origonal mic's , the Cobra also has the asiatic teardrop mic and the s/star has the sedelta power mic. they are only ever used at home, never mobile.
I am asking ?120.00p UK each for them.this is to include shipping and Insurance byWorldwide Air-mail Express. that works out at $170.55 US Dollars and $262.40 Canadian.
IMO/Personell cheques (must clear) and registered cash excepted.
Sam

twistedhed@webtv.net wrote:
<>

Forgive me for being skeptical and/or naive, but can you
provide some specifics other than vague references to
underhanded dealings concerning global communications
by the Feds?

<>

Again, forgive me for pressing the small matter of details, but
can you mention specifically what cash is flowing as a result of
Riley Hollingsworth's amateur radio enforcement efforts?
Amounts? From whom? And to whom?

<>>

Maybe you can help me here. Of all the published remarks
made by Mr. Hollingsworth, I cannot find any mention of his
intention to streamline or reorganize anything. I do see where
his stated goal is to assist in cleaning up ham radio, and in
another recent statement he promised to look into 10 meter
incursions by unlicensed stations and sale of type-unaccepted
equipment.

<<>>

What you say sounds very impressive. I'm sure there is a good
reason that you provide no specifics regardig either your identity
or the role that you played in our government.

<>>

A sampling of the interviews you refer to, published here,
would really help deliver my wake up call.

<>

Sounds ominous. Er, just a few things I need cleared up here:

* who is it that we think is in charge and isn't?
* what is it that we think will take place that won't?
* what current bill is it that you are referring to?

<< No, your messiah is a false god. What will likely take place
SOMETIME in the future, is that local municipalities will be given the
jurisdiction of enforcing their own areas. But this is old news. Like
I
said, you are free to believe what you like and no one will think ill
of
you for it. But these are the facts. It is my profession and my
passion
to educate the public.(I am a writer) Especially when it comes to Big
Brothers Bull. There are many avenues for you to obtain the true
information on what is truly taking place. >>

Can you provide a bibliography of your published work? I'd
like to catch up on what I've been missing all these years.

<>

Maybe I missed it, but it's unclear who specifically you feel claims
to hold the reins of power at the FCC and who really holds them.

1103. The FCC this, the FCC that.....yea right

Newsgroup: rec.radio.cb
Date: 2001-05-09 18:44:25 UTC
From: Mr Know-it-all <blowme@screwu.com>
Message-ID: <01c0d8b7$b9a9c660$82878685@clip>
Source record: 81406

1. The FCC has bigger problems than illegal CB use.
2. Who do you know that ever got busted for running
power or out of band? (Ham Operators are not allowed
to answer this question, CB'er's only)
3. If someone out there does know someone, ask youself
"were they doing something really stupid?" or "were
they fucking up the neighbors TV or Phone?"

I have been involved in CB/Ham for many years and the
only people I know of that have EVER gotten busted were
ones that were just outright STUPID or took chances, ie.
advertising shit on the web just asking for trouble, or
running a shitload of power and pissing off the neighbors.

If the FCC busted everyone I know for running power and
or out of band operations, they would have to start building
jails to hold them all. Not to mention, the ones they do get
ALL negotiate down the fine payment from the outlandish
thousands of dollars down to something affordable. They
don't want you in jail for this shit. They just want to try to make
examples of the few they catch and hype it up so everyone
thinks they are out in force doing something.

Prime example.....remember the old pirate station who they
got on the east coast a couple years ago that worked out
of the Blue Ridge Summit PO Box? Took them over a year
to catch him and fined him $17K originally and he got them
down to $1200.

There are some amp builders who have gotten hammered
recently for some big bucks and gotten away with pennies
compared to the original fine.

Bottom line is that as long as you have common sense and
avoid the Doug Adairs of the world, you'll have no problems.
There is always some asshole waiting to fuck it up for
everyone. Don't let 'em get you down.

A big hearty "Fuck You" to all the hammers (except the
decent ones). Cb'ers have a nice day.

Not personally.

>3. If someone out there does know someone, ask youself
>"were they doing something really stupid?" or "were
>they fucking up the neighbors TV or Phone?"

Doesn't matter.

>I have been involved in CB/Ham for many years and the
>only people I know of that have EVER gotten busted were
>ones that were just outright STUPID or took chances, ie.
>advertising shit on the web just asking for trouble, or
>running a shitload of power and pissing off the neighbors.

Stupidity will get you busted for sure, but wouldn't just getting a
license be a more intelligent decision?

>If the FCC busted everyone I know for running power and
>or out of band operations, they would have to start building
>jails to hold them all.

Not true, since the FCC usually hits them where it counts -- in the
wallet. BTW, FCC fines are non-dischargeable in any bankruptcy, even a
Chapter 7. That means you gotta pay it - period.

> Not to mention, the ones they do get
>ALL negotiate down the fine payment from the outlandish
>thousands of dollars down to something affordable.

All of them? Hmmm.... I think you may have to back that one up with
some facts.

> They
>don't want you in jail for this shit. They just want to try to make
>examples of the few they catch and hype it up so everyone
>thinks they are out in force doing something.

Risk assessment by the potential offender is part of any social or
legal system.

>Prime example.....remember the old pirate station who they
>got on the east coast a couple years ago that worked out
>of the Blue Ridge Summit PO Box? Took them over a year
>to catch him and fined him $17K originally and he got them
>down to $1200.

Yes, and isn't it funny that Herzig works out of a PO box? the same
box that is listed as his address on his Tech ticket? Doesn't matter,
any good piece of DF equipment doesn't need an address to function
properly.

>There are some amp builders who have gotten hammered
>recently for some big bucks and gotten away with pennies
>compared to the original fine.

Such as ...

>Bottom line is that as long as you have common sense and
>avoid the Doug Adairs of the world, you'll have no problems.

Since you will never be able to avoid the 'Doug Adairs', the bottom
line is that as long as you keep it legal you will have no problems.

>There is always some asshole waiting to fuck it up for
>everyone.

You mean like the way the pirates have fucked it up for the legal
operators?

> Don't let 'em get you down.

I don't, I really enjoy listening to their petty excuses for criminal
behavior.

>A big hearty "Fuck You" to all the hammers (except the
>decent ones). Cb'ers have a nice day.

Thank you. Have a nice day yourself.

First thing ... we elect the gov't so why not trust them to some extent?

Next, when you consider people still do stupid things regardless of there being laws there, what do you think would happen if they are not?

> of eBay?

why would anyone have the ebay blues? because of jokers like the
antikeyclows, LEGAL radios have been taken off ebay, because people
can;t read. evidence follows

a president grant, a fcc type accepted 40 channel radio, plain radio was
booted from ebay because one of these fools sent ebay a nastygram
telling them it was against ebays policies, I'd bet that if I put my
president washington on ebay they'd try to have it removed as well, and
it is as legal as it was when it was shipped from the factory, in fact
it is one of the original president washingtons, is in mint condition,
never even had the mic rewired or replaced the fuse in the back. still
have toe mounting kit for mobile operation and the 12v wiring for it.
Yet I'd bet if I put it on ebay these clows would try to ghet it
removed, and report me for selling "export" radios.

Subject:
Why did my radio get kicked off of Ebay?
Message-ID:
<20010422170259.25178.00000809@ng-mh1.aol.com>
Xref:
cletus.bright.net rec.radio.cb:101743

Maybe someone can explain, since ebay has not answered my emails. I had a
President Grant 40ch am/ssb radio up for auction. It was removed and I was
emailed that it is against their policy. It also said someone sent in a
complaint about this radio. I know people are mean but why hurt a guy who is
trying to make a legitimate buck. This radio was not modified at all, it wasn't
an export, and doesn't go against their policy. If the person who did this to
me reads this, just remember what goes around comes around.

Better yet a motorcycle battery and a 300 watt inverter with the proper homemade attachment.
This works with cable and phone too so if you are going to do it do it right!

BTW they don't try to key on me anymore.

1148. recommendations, FRS w/ VOX?

Newsgroup: rec.radio.cb
Date: 2001-05-10 00:27:12 UTC
From: mountaineer@nospam.goplay.com
Message-ID: <3af9dfdb.295700418@news.pcisys.net>
Source record: 81440

I'm looking for some opinions on pairs of FRS radios with VOX capability for rock climbing in poor weather or obstructed voice communications areas (seem to be a lot of those in the multipitch trad climbing areas I frequent). Simple timing and rope signals work a great deal of the time, but I like my toys and there are some additional safety benefits of having UHF commo.

Anyone have suggestions or stories to share on certain manufacturers/makes/models? PRC-126s and -77s are just too damn heavy and unwieldy to hump up dicey stuff (plus they're mil-band and difficult to obtain). I saw a Cobra 310 but it had what appeared to be a proprietary NiMH rechargable, not ideal for expeditioning with no 120v 60Hz power.
(I DON'T READ THIS NG REGULARLY, PLEASE EMAIL ME DITTO RESPONSES. THANKS!!!)
TIA

If you had bothered to READ his post you'd have seen he said he is trying to fix it, that someone has ALREADY moded it and was trying to return it to normal, jezzz you are so flipping paranoid about "illegal" , "export", and "mods", that you can;t see the forest for the trees. It also might help to remember that some of these older FCC type accepted radios in the days before the compter boards had higher performance, I once had a LEGAL right from the box,right from the factory SBE 40 channel mobile CB with USB/LSB, this puppy when I first got it, I hooked it to a meter to to make sure it worked, it has set on the shelf for quite a few years,the guy bought it new then he had a stroke and years later his wife decided to sell it, I bought it for $8 unopened, still had factory seal on box and still had celophane wrapper on box. Anyway I put it on testmeter to see what it would do, AM deadkey 15 watts. I spoke with a HAM friend of mine about this, asked his advice, he sugested I contact the FCC and ask them, because if I turned it down to legal power I would be breaking the rules by modifying it!!!!!!!!!!!! and guess what, the FCC said that was right if I opened it up and turned it down I would be breaking the law. You know what? I still have that radio. it sitts on a shelf in my shed, never hooked it up other than to that test meter, nevr talked on it. But does that make ME illegal? hrmm?

DUH. That's what we've been saying in this NG for years. Don't splatter. Don't tear up the neighbor's TV and telephone. Don't go on 10 meters. Don't splatter into the 10 meter DX window. In other words, don't attract "attention" and you can pretty much do what you want. But if people start complaining about you, the spot light comes your way and you get examined under a "microscope".

What is a "high skip cycle? You're making this up, right?

In doing considerable work with FRS under a wide variety of conditions, I have never detected "skip" on 462 MHz. Nor have I read any documentation of skip on FRS, and I read many FRS-specific forums.

A major news magazine in the USA is preparing a story on FRS, as we speak. We'll soon see if the reporter found any evidence of "skip" on FRS.

>I guess that the US is just behind the times but what

Assuming you are saying the FCC otherwise doesn't obey the law, would
you mind supporting that statement with some examples as well? Since
you have gone to all this trouble already, a little case law shouldn't
be too difficult to source. Just the links would be fine, no need to
waste your time with all that typing.

You have to remember that most "safety" related laws and rules are written for the lowest common denominator in society. Just because YOU can safely drive a car on a particular road at 70 MPH, does not mean that everyone else can. And since personal responsibility and prudent judgement seems to be at an all time low in this country, we have been more or less forced to have the rules dictated to us. It's a shame for those of us that feel that we're "better" than that, but the law is the law, and you do not have the right to arbitrarily disregard them. Organize a lobby, study and document your evidence as to why a particular law should be changed, and present it to the proper governing body, and let the process do its thing.

I am very much in favor of personal responsibility, and despise the government meddling in my life. But you have to realize that there are a great many peope in this country that are NOT responsible, and do NOT exercise good judgement. It is THESE people that the laws were written for. As long as people demonstrate that they could not behave themselves if left to their own desires, then the government will have to regulate them. This news group is a perfect example of why we need rules and regs. Too many people operate potentially dangerous equipment with little or no regard for other people's rights, yet they are the first to piss and moan when the law bites them. It's hard to make a case in favor of that type of mentality.

Impressive maybe, factually full of beans. The 2510 is not type accepted for amateur use because amateur gear is not type-accepted at all. Modifying a unit that has been blessed for CB or any other service for use in the amateur service is perfectly legal. Modifying non-TA gear for a service requiring it is frowned upon however.

Didn't we have a similar education session with Leland???

Try posting to "alt.radio.family" group. Also you can try posting a message
here to the attention of QRM2000. He hangs out on the FRS group a lot, and
maybe could answer your questions.

Hey QRM2000,

I know the Detroit FCC field office was at Dayton last year, etc. because Dayton Ohio is part of their area to police. They got on the case of a vendor selling HF amplifier kits in the tent area, which was way in the back corner of the fleamarket. Since Mr. R. H. will be there this year I would expect the "troops" to keep things cleaned up so the "boss" doesn't see anything. As far as "SURVEILLANCE EQUIPMENT" being used, I really doubt it.

Don't be so sure.

Last year, I attended Orlando Hamcation 2000. Several individuals were openly selling CB amplifiers, modified CB radios, "export" CB radios, and modified 10-meter amateur radios. These radios were clearly being displayed on top of the tables with no attempts being made to hide them or disguise their true purpose.

Meanwhile, Riley Hollingsworth was less than 500 feet away from the tables, delivering a speech in the meeting hall.

Unbelieveable!

Thousands? Got any real figures are is this just a wild guess? A few little dinky low power stations is hardly a phenomenon that will sweep the country.

At any rate it will be interesting to see what happens. I have been told that where ever he goes, to give speeches etc., the "troops" are out looking. Several people in the Ham policy news group claim there were some busts made at a few Hamfests where Riley was in attendance. I think it all comes down to is it has to be a clear cut case the equipment is in violation. The H.F. amplifier kits were because there were no "type acceptance" stickers, and the amplifiers operated on 10m with the required "secret" mod's. The case with the "export radios is not so clear. It all depends on who buys them, and on what band they get used on too.

There are legitimate reasons for having a modified 10m radio. For example people use them with transverters to operate on other bands. If you want to operate on 2m, that band is 4 MHz wide, so the standard 28.0 MHz to 29.7 MHz can't cover the whole thing without opening up the TX and RX. I know may Hams get the cheap older Radio Shack 10m mobile for just that reason. Now the new Yaesu FT-817 is smoking hot with the microwave guys. It's small, low power output perfect for transverter input drive requirements, all mode, and has the three popular "IF" transverter frequencies used 10m, 2m, and 70cm.

The light weight of both rigs make them easy to carry to the top of hills etc compared to a base type of radio.

I would have to agree that's where most of them end up all right. You see
these guys carrying those rigs off at a Hamfest, and then watch as they
clime in to a pick up truck with a big K40 mag mount on the roof. One has to
sort of wonder about that at times. 8-))

Did you see the ads in the last couple month issues of QST for the mobile
10m and 12m rigs? Hummm? There are everywhere you look.

I'm looking at building the Elecraft K2 QRP rig, I got into radios/building
kits thanks to my uncle who is a quadrapelegic. He was into listening to SW,
and was studying to be a ham when he was in his accident, starting from the
time I was 9 years old I became his hands, he and I assembled many od the
HEATKIT units, and he would also buy me kits and other hobby stuff for my
birthdays and christmas, one year he bought me a Drake SW reciever, I still
have it. Of course with the nerve damage in my neck and shoulder from a head
on collision in 91 I might have problems doing the fine soldering work, I
might have to buy one of those soldering vices. But I'll give it one helluva
go anyways.

The majority of so-called "10 meter radios" built today are targeted for use by CBers - as evidenced by their channelized design, built-in roger beeps, echo boards, etc. There is no reason (other than the illegal cb market) that these radios exist.

Check out this web page written by export radio fans. The 3rd paragraph is especially outrageous. The intent seem to be to open up 10 meters to CBers. No where is there talk of using these rigs legitimately.

http://www.mods.dk/mods.php3?model=hr2510&radio=uniden

"Author: Josh Steele

As you know, the HR2510 is a mobile 10-meter transceiver radio recently introduced into the market by the Uniden Corporation. Rumor has if that if is easily convertible to on 11-meter radio, but the manufacturer would never admit so that. Let me fell you, however, that the rumor is definitely true.

This radio is hot!. It is so hot that distributors can't keep the radio in stock. And, as Jack reports to me, Uniden can't fill their orders to heir distributors. They cannot produce enough the radios in the Orient. A large shipment was received in the states recently, but it only mounted to a fraction of the number that has seen ordered from the company.

The HR2510 is for the CBer who has verything. If can expand your horizon into a hole new area. As Uniden's own literature tates, it "opens up 10 Meters to more people that ever before." If you're a lover of export radios, you'll love this unit. It is an idea whose has

Bottom line.....If 10 meter radios were not marketed to
CB'rs.....Makers would have almost no market to speak of. We all know any
general coverage radio does 10 out of the box and 95 % of them are 12v
ready.

By the article you quoted, the FCC has the authority to inspect any
station that is "required to be licensed." When FCC field agents DF a
transmission to a single structure, and when that transmission exceeds
the emissions allowed for an unlicensed station, there is sufficient
evidence to prove the existence of a station at that location that is
"required to be licensed," and therefore is subject to the FCC's
authority.

I'm familiar with many of these legal "theories." Pirates make them up
almost as fast as they are shot down in court. They ignore the intent
of the law in favor of any distorted definition that favors their
criminal behavior. The links you provided are just a small sample of
the many attempts to undermine a reasonably fair and equitable legal
system that is acceptable to the vast majority of citizens.

BTW, if you want to read even more whacko word-twisting, do an
internet search for the phrase "sovereign patriot," which is another
type of idiot that wants something for nothing.

I am in the process of selling some 5763 output tubes (which I know are the finals for the Golden Eagle) when someone asked me if these were also the same finals for the Mark III. I didn't know the answer (I'm not into these type of rigs). Does anyone know if they both use the 5763 output tubes?

FYI on lower speed limits...

The NMA recently received a special report from the Montana Department of Transportation on highway accidents and fatalities. Chad Dornsife, NMA
Nevada Activist, has created a web page that compares Montana's last 12 months WITHOUT a speed limit to their first full year of experience WITH a speed limit.

The new information shows that fatalities have more than doubled on rural
interstates and has also increased on rural primary highways. This information contradicts the state officials who claimed speed limits, higher fines, and more enforcement would lower traffic deaths.

You can find the full story at
http://www.hwysafety.com/hwy_montana_2001.htm

Probably, The US and the FCC now are mostly involved with how to impliment
the new wireless techs now emerging. Especially "Bluetooth"
However using cb works and is free. Cell calls cost money. Switching to
FRS or VHF means buying more equip where the CB is universal except moving
co.'s
Range isnt needed and if your sleeping rally deep the yard jockey will knock
on your door.
One place we go too goes to ch 23 for one guy since he has an old 23 ch
radio and he doesnt see a need to buy new.

I don't think I'm wasting my time when I never accused you of anything
but you start telling me about how legal you are. I consider that
suspicious (thou doth protest too much). I made what I thought was a
statement of facts about a CB DX club. My facts were corrected. But
somehow you felt the need to read something more into my post.

The AE club promotes illegal activity. The newsletter promotes illegal
activity. You are an active participant in both. You promote illegal
activity in your posts. Perhaps you jumped to the conclusion that I
might have been accusing you of not promoting, but participating in
illegal activity. That, my friend, is your problem. I don't think I
ever called you a pirate. If I did, would you refresh my memory as to
which post that was in, as well as the one where I call myself a
detective?

Or maybe you just have a guilty conscience....

>1) Are you withing 150 miles of mexico city ?

With two watts and a good antenna, I can cover the better part of a 20
mile radius. I certainly can't break the 250km limit with my ground
wave, and that was not my intention. But skip happens, and I would
support any attempt to loosen the 250km limit for that purpose.

>Did you ever take into account the antenna that the voyager was transmitting

>it is the recieving stations antenna and the frequency that played a part.

My point exactly. Why push 500 watts when you can do what you want
with just 4? Unless all you want to do is step on all the mudducks.

(The terminology that CBers have come up with is interesting. They use 'mudducks' to describe normal, decent people operating legally, and 'freebanders' are operators that show a reckless disregard for the same laws that grant their freedoms).

Plus the fact that on some models, moving a wire on a circuit board displays the CB Channel Number when you push the "secret" button on the front panel (LOCK).

Tell me again what market these are aimed at?

As for Riley, he told me 2 weeks ago that he really wants to get to Dayton but that he was having schedule conflicts. Even if he can't resolve these, there still may be FCC personnel on hand.

And although you may think you can safely drive on a particular road
at a particular speed, you may be over-judging your abilities.

I heard of a survey once that found that something like 90% of people
though they were above average drivers. Now if they were correct, it
means the distribution is very skewed; there must be some REALLY REALLY
awful drivers somewhere. It's more likely that they are just too
confident and can't properly judge their abilities.

The fastest speed limit in most states of Australia is 110km/hour,
which is about 69 MPH. It's fast enough for a legal limit.

Nah, hell no it ain't all gone to trash. Just like a small town, there will exist a segment of vermin. It don't make the entire town bad. Zip right through the fallen dung, dodge a pile or two, and post away. Even if the small men attack an initial post for asking something like mod info., you can be assured your info will more than likely be answered, maybe through email. What's more imporant, getting the info. or caring what someone that has no significance in your life thinks? Many of us have switched to email for arranging radio contacts, and many know where to find each other. Nothing changed. We just exclude the rude.

Best guess if it is legit is that he's a Euro where FM is the norm. His 5kHz swing is already too wide for a 10 kHz channel. The beauty of FM in this case is that the receiver's 8kHz i.f. bandwidth will cut his signal to shreds.

Where attempting to overmodulate Ancient Mary generates crap and cuts talk power, over-deviating FM just causes listeners to think 'WTF he say?'

I posted this message earlier but made an error on the price (my fault)
they are ?60.00p each / ?120.00p for both of them
I have the Cobra 148 GTL-DX MKII and the Superstar 360 for sale, they are
both in excellent condition and they both cover 26.000MHz to 30.000MHz
all modes and alpha channels, UK/Cept CB straight line 40. Both have the
origonal mic's , the Cobra also has the asiatic teardrop mic and the s/star
has the sedelta power mic. they are only ever used at home, never mobile.
I am asking ?120.00p UK for both of them.this is to include shipping and
Insurance byWorldwide Air-mail Express. that works out at $170.55 US Dollars
and $262.40 Canadian.
IMO/Personell cheques (must clear) and registered cash excepted.

I said something you don't like and now you call me a fascist? Do you
even know what fascism is? Look it up in the dictionary and then tell
me how my post resembles fascism.

In the meantime, why don't you try and comment (intelligently) on the
part of my post you ignored:

>>By the article you quoted, the FCC has the authority to inspect any
>>station that is "required to be licensed." When FCC field agents DF a
>>transmission to a single structure, and when that transmission exceeds
>>the emissions allowed for an unlicensed station, there is sufficient
>>evidence to prove the existence of a station at that location that is
>>"required to be licensed," and therefore is subject to the FCC's
>>authority.

It is rumored that The Million Mom Anti-Gun Rally in Escondido, Ca.
will be broadcast on short wave frequency 6.990 mhz USB. The rally is
Saturday
May 12, Mothers day weekend, from
1:00 to 3:00 PST or 20:00 to 22:00 UTC. I did not hear if broadcast is
live
or recorded and played later. I live in Escondido, but am not involved
with the rally.

Subj: Complaint letter from John E. Rahtes Ref: EB-01-PA*******
Date: 4/7/01 2:14:51 PM Eastern Daylight Time
From: CrazyBobDJ
To: fccinfo@fcc.gov

Hi John. I just received a certified letter from you warning me of "UNLICENSED OPERATION OF A CB STATION." I was under the impression that the CB license requirement was dropped in 1983. I paid 20.00 for my CB lic. in 1973 and my call was KGM-4216. I am now an ADVANCED CLASS AMATEUR, and I do not have an amplifier that is capable of running the full legal limit of 1500 watts. My call sign is ***** and my wife's call is ******. I have been employed by the US POSTAL SERVICE since 1976. I work part time as an engineer and air talent at **** in *******. As a Ham., I'm involved with the Sky Warn net and emergency communications on the 145.110 repeater system. I use an Yaesu FT-530 hand held with indoor antenna for VHF/UHF. For HF bands, I just sold my Kenwood TS-430 rig on EBAY. However I like to restore old tube type Heathkit radios
I have a DX-40 & DX-60 transmitters. My amp. is a Hamarlund HXL-1 running a pair of 572-B's. It is capable of 5-7 hundred watts. I use a low pass filter I will be happy to pay for any filters my neighbor may need. I also have several 11 meter radios that I convert for 10 meter use. My equipment is RF grounded to a copper rod just outside of my shack. I do not interfere with my own consumer eletronics <snip>----------
Would anyone care to read the reply that the FCC sent back to me? It will make you LOL!!

Rich, Why are you spamming the antenna discussion forum with auction
crap?

This forum is NOT for things being sold. Read the FAQ for this
newsgroup.

What I meant was when CB is in a high skip cycle there is no skip on FRS.
Let us face it during a high cycle ground wave during the day is down to
about 1/4 mile from truck to truck.

The WRC doesn't care what the US or the FCC has to say. If they pass the rule all countries must comply or face hefty fines. WRC has over 150 member nations all with one vote each and money is the driving factor. Yes CB is free and if the countries can get the big commercial licence dollars from that band then say good by to CB, Money Talks. That is all that the deciding voices have to do is turn a CB on and try to find something useful to justify its existence. Remember that it was not set up to be a hobby and it was not to be used for idol chit chat or reporting what the police are doing.

I hope you're going to have it crated or ship the tubes and power
transformer separately. I just bought one and it was damaged
in shipping. The guy who shipped it did the best he could with
cardboard boxes and foam "peanuts," but that's not nearly
enough to get that amp even one state away without damage.
Makes sure the guy who buys it understands that the packing
and shipping can easily reach $100 or more. The shipping
for mine was $80 and it showed up damaged. Insuring it
heavily is a waste of money because the carrier will deny the
claim with the reason being "insufficient packaging."

Dispite the obvious troll, I'll just quietly mention that digital cameras can not be used to present evidence. Until there is a non-breakable electronic watermark, you can't tell if the picture has been tampered with. No, I'm not a lawyer and I'd love to hear this from a lawyer - but I do work for a digital camera manufacturer that is working on this ... (this is published news, anyways).

73 from Rochester, NY
Jim

ps - maybe they've got one now? Anyone?

I also recently bought an sb-220. However, it was double boxed and packed very tight with 2" foam board. Wrapped very nicely. The tubes were shipped seperatly and were also packed very well. No damage what so ever, but it is very heavy and definatly needs to be packed GOOD!!

From: The Packrat <spam@n7uic.net>
Message-ID: <4c3L6.4957$la.60680@news1.sttls1.wa.home.com>
Source record: 81642

There are 2 connectors on this unit and of course they didn't label them. I am playing around with headsets and am wondering if someone has the pin out information for the 2 plugs. They are both 3 conductor and one is a 1/8 phono and the other is the 1/16 phono. Anyone in here work on these that may have an idea?

Thanks,
Packrat

Has anyone heard much about what new equipment
that will be showing up at Dayton next week?

The one thing that I have heard is that the equipment
manufacturers feel that mid range equipment is not selling.
Therefore equipment will be priced below $1000 or above
$2000.

>>Would anyone care to read the reply that the FCC sent back to me? It will
>make
>>you LOL!!
>
>I'd love to see that! They come up with some real winners some times.
>

The first two letters they sent me were by snail-mail. The latter was sent certified mail "WARNING ME OF AN UNLICENSED CB RADIO STATION" I responed to them via snail-mail, and email. The FCC ONLY replied via emal. Here is that letter: BTW, yes I'm in South Jersey**********

Subj: Re: Complaint letter from John E. Rahtes Ref: EB-01-PA-092
Date: 4/11/01 1:37:21 PM Eastern Daylight Time
From: TWILLIAM@fcc.gov (Trent Williams)
To: CrazyBobDJ@aol.com
CC: JRAHTES@fcc.gov (John Rahtes)

Mr. ******,

Your e-mail response to John Rahtes was forwarded to me, since I am the agent to whom this case is assigned. I assumed, based upon the informtion I received from the complianants, that the interference was being caused by the use of a linear amplifier with a CB radio. Failure to receive a response to our initial, less formal letter , reinforced our belief that the person responsible for the interference was a CB operator.

I have been in contact with the complainant/s, who have opted not to make direct contact with you to resolve the interference issues, although they have advised that within the past two weeks, the interference has diminished to the point of being a non-issue.

I will close this case, pending receipt of further complaints. I do recommend that you make contact with your neighbors in order to determine if any of them are continuing to experience any type of interference to home entertainment equipment and to offer such assistance as may be required to eliminate any interference which may still be occuring.

Thank you for you response. I hope this is no longer an issue which requires FCC intervention.

Trent

Not to be argumentative, but those regulations have that covered as well. If you read the regs closely, you will find that the "right" to inspect a radio station is actually something "you" consented to when you first picked up the mike! By act of Congress, those who ostensibly represent us, FCC was created and authorized to make those rules by the Communications Act of 1934. In essence, the rules state that an FCC agent MUST be allowed to inspect ANY station under its rules, and by operating a CB station--even tho it has no "paper" license, the operator thereby agrees to allow such inspections. So, when you pick up a CB mike, you are "consenting" by proxy to allow an inspection. Failure to do so carries certain fines and penalties. You can, indeed, refuse to allow an agent inside your home, but by so doing, you have caused pre-sumption of wrongdoing. Bear in mind that they don't just come to your house just for the heck of it. They already have good evidence that a violation has occurred, and have narrowed it down to the residence in which they are interested. Accurate DF equipment and Spectrum Analyzers don't lie--they can pick a particular signal out of a multitude because every radio signal has a "fingerprint" or unique characteristics, and they carefully observe these anomolies for awhile before acting. When the agents knock on the door, they already *know* what they are after. Refusal just generates a worse penalty because they know that an offender could use the time needed to obtain a warrant to hide the amp and "freeband" radio, for example.

The operation of a transmitter is only a "right" under the laws that have been carefully crafted to allow the maximum use of spectrum by the most people. The same laws are also designed to provide separation be-tween services and prevent interference, as well as allow radio to be a great asset to the public welfare and safety. Actually, US communi-cations law is quite liberal compared to some other nations'.

Finally, due to the nature of radio communications and the ether through which it travels, its use has to be regulated by *somebody*-else it would become useless. If FCC were powerless to do its job, i.e., in-spections, NOBODY would be able to communicate. That's what prompted the Communications Act back in 1934. In FCC's absence, what would YOU replace it with?

The same applies to your mobile station as well even if you don't like
it.

Yes Sparky...it's the REAL A.E. 352 here. I just want to say that I enjoyed 'picking your brain' this week. Although many of your posts/replies are actually quite intelligent, there are others that I simply take with a grain of salt. I'm just kinda' curious as to why you don't jump up on rec.radio.swap and chastize the hams for selling their 'illegal' gear there too. I mean I've seen PLENTY of amps that do in excess of 1500 watts P.E.P., and I have seen the MARS/CAP mods done to radios even though the seller wasn't authorized to transmit there.(tisk...tisk)
And while I'm on my soapbox, how come I NEVER hear you on the 'Liberty Net' chastizing hams for spewing their racism and hatred? Oh well...apparently you're only 'one-sided' and only have us CB'ers in your crosshairs. There are MANY more 'pirates' out there that you could be channeling your energy towards.
In closing...I think I'll go listen to the 'pirates' on 6955Khz...heck, I might even catch a good one! And the last time I checked, NO cb radio, modified or otherwise, can get 6955Khz. Must be a 'wayward' ham with his Yaesu! Have a GREAT weekend my friend, and remember your Mother on Sunday. 73's....

Sparky,
I've noticed that you have made mention of your DF (directional finding) array on this newsgroup. YES...you actually CAN find the direction of a signal with your beam!! It dosen't take a rocket scientist to figure that out. But if you WERE to have an ACTUAL DF array, you would be an agent of the Government, and you'd surely WOULDN'T be posting it here! In my opinion, the BEST you can do is round-up two friends, and attempt to locate a signal through triangulation. And save that DF stuff for some greenhorn.

Spoken like a true roger-beeping CB ignoramus. Look retardo, EVERY commerical ham rig comes able to transmit above and below the ham bands, right out of the box. It has been this way for time immemorial. Hams don't transmit out of band simply because they have a brain and are not ignorant redneck CBers. Amps are rated above 1500 watts PEP to give the design some headroom and minimize component stress. Course you CB children see rf power ratings and you INSTANTLY

think "Yeah, all knobs to the RIGHT!" Wise up, dink boy.

---------- Got my ham ticket in 1989. I just like to tinker with old CB equipment and modify it to operate on ten & 12 meters. We hang out alot on 29 Mhz. My 700 watt station sometimes reaks havoc with my nieghbor. I'm thinking about upgrading to the full legal limit. I told this to theFCC and they just backed down and closed the case. I guess I'm just an advanced class CBer.

You make two good points here. First, I choose my venue and others
choose theirs. Second, most equipment, in and of itself, is not
illegal to own, sell, or modify. If you go back and read some of my
previous posts you would see that I have, at times, defended the right
to modify equipment. Even the operation of legal equipment can be
illegal. The common denominator here is "operation," as I'm sure you
will agree.

>round-up two friends, and attempt to locate a signal through triangulation. And
>save that DF stuff for some greenhorn.

Sorry, I don't have a beam. Accurate DF equipment is easy to build,
and it's very easy to triangulate local signals when you own two
locations that are only a couple miles apart. A complete remote
doppler station can be built in less than a week from spare parts.
Feed the output of the antenna array to a phase comparator, through a
low-pass filter, and on to a VCO. The result is an audio tone that
varies with the direction, and can be transmitted remotely through a
phone line. Right now my remote station is down because of
construction on the property.

Anyway, the result is that I can pinpoint any HF transmission to
within 100 yards (usually better) within fifteen miles. As expected,
accuracy drops off with distance, but I have a small loop in my truck
that can improve the accuracy to within a few feet. I also built a
goniometer at home just for fun -- it's more sensitive to direction,
but the frequency response is flatter than either of the doppler
arrays. BTW, the differential cap is a bitch to homebrew.

So does that make me "an agent of the Government"? Nope, it just means
that I'm a bit better at electronics than you assumed.

Apparently Sparky does not understand that putting "secret" in quotations indicates that we all know which button does the trick--even if it the label says something else.

Here's what he said:
>
>You are a dumbass too just like me QRM. What the hell is "secret" buttons
>used for?

Here's how I worded it:

> Plus the fact that on some models, moving a wire on a circuit board
>displays
>> the CB Channel Number when you push the "secret" button on the front panel
>> (LOCK).
>>

It seemed pretty clear to me. Perhaps I have overestimated the reading ability of some members of this NG.

Sparky continues:

>If you have anything intelligent to say, say it or get
>off the newsgroup.

Sorry you have an attitude problem, Sparky. I have been on CB since 1962, and I've been in this NG for four years. I wrote part of the FAQ, and I think I've contributed a host of intelligent words in posts.

In recent years, the editor of Popular Communications has thought enough of some things I've written that he included them in the magazine. About a year ago, I was included in an article about FRS (with photo) in the New York Times, and I'm presently feeding information to a writer with US News & World Report who is preparing an article on the use of license-free radio services.

Perhaps my involvement with the FCC is what's bugging you, OM. Get over it. History teaches us that without allocations and enforcement, the spectrum becomes useless. The same rules that apply to unlicensed operation on 10 meters serve to protect what we have on 11 meters. One "over the horizon" radar installation operating on or near our frequencies would wipe out CB as we know it today. You want to throw out the rule book? Be prepared for the results!

I don't lose sleep over whether you like me, Sparky. But wake up! I'm not the enemy. On the other hand, you seem reluctant to identify and address the problems in the Citizens Band radio service. And you constantly attack those who DO care. Kinda puts you in the same league as the threats to CB, doesn't

it? In the future, I hope you'll JOIN those who promote this hobby, rather than ATTACKING these efforts!

QRM

The cleanest signals come from the better-built high-power amps when
driven with power reduced so low as to not create grid current.

Solid-state amps are just plain noisy, and need heavy filtering. The
makers of these dirty amps could build them with some filtering, but
they don't in order to keep them cheap. The amp makers shift the
responsibility to the operator, expecting that anyone that uses one of
these amps should know at least as much as a ham operator. The funny
thing is that if the operator had the skills and knowledge required by
a ham, they would just go get their ticket and operate them legally
(not that any good ham would even mess with one of those
splatterboxes).

>>And while I'm on my soapbox, how come I NEVER hear you on the 'Liberty Net'
>>chastizing hams for spewing their racism and hatred? Oh well...apparently

>>otherwise, can get 6955Khz. Must be a 'wayward' ham with his Yaesu! Have a
>GREAT
>>weekend my friend, and remember your Mother on Sunday. 73's....

I listen to many shortwave stations, even some pirate stations. Most
are crap, but a few of them have a legitimate purpose (IMO). Only one
of those is in the US. I haven't heard any argument from any
'freebander', 'outbander', 'DXer', or whatever they call themselves
that gives legitimacy to any radio activity that could be done legally
on the amateur bands.

As I have said before, anything that can be said about freebanding can
also be said about public masturbation.

Hey Ken, do you live near me or something? because there is a few clowns around here that do that. One of them has this thing about taking a handheld into the crapper with him, another one likes broadcast the Doctor Demento radio show collection he owns. We had one guy that liked to rebroadcast rush limbaugh, until his radio melted down, literally, his amp and radio was drawing so much juice it started an electrical fire and burnt down part of his house.

> bill the problems usually happen when it is dropped and the weight of the
> transformer bends the shit out of everything.

That's exactly what happened to mine. It took
out one of the circuit breakers and bent a number
of aluminum chassis pieces including the outer
cover. The aluminum Heath used is butter soft,
so straightening the parts wasn't as bad as I
anticipated, and a replacement circuit breaker
was an easily aquired $5 part. But I still had to
do the work and eat a loss in the value of the amp.
I paid top dollar for this amp ($630) because it has
all the Harbach mods and a custom standby switch
that looks absolutely bone stock. In other words,
there's a third rocker switch on the front that looks
exactly like the other two, and the lettering that
denotes the switch positions is exactly the same
as is used for the two stock switches. But now
my 9+ on a 1 to 10 scale amp is a low 7. That's
why I opened my mouth here. Be careful when
considering the purchase of a heavy tube amp
that has to be shipped any distance. And don't
think the seller is a cheat when the packing,
shipping and insurance fees amount to some
real money. That's just the way it is unless you
want to risk a situation like mine. The seller
only charged me $30 for shipping and he ate the
rest ($50). But the damage caused the value to
decrease--so nobody wins. The seller only netted
$550 for an amp that was worth more, and now
the amp is probably only worth $500. Don't let this
happen to you.

If I sell the amp to someone that I have to ship it
to, I'll probably pull the plate transformer and ship
it and the tubes separately from the rest of it.
When you think about it, that's the most correct
way to do it. When these amps were new, Heath
would pack the transformers and tubes separate
from the rest of the chassis. Customers would
have to buy special containers from Heath if they
wanted to return an assembled unit. There's a
section in the manual about that. And I wouldn't

be surprised if Heath made the customers pull
the tubes and plate transformer and pack them
separately.

> If you ship electronics and
> expect UPS to insure it you need the foam type (encapsulated) packing that
> molds around the item you are shipping. Otherwise they won't pay/

I agree. If you mark the boxes "Fragile" and
"Delicate Electronic Equipment," and you ship
it at a UPS Customer Counter (the little area
at any UPS "hub" where customers come to
ship packages directly), the UPS employee
working there is supposed to open the boxes
and inspect them for sufficient packaging
before accepting them. Make sure they do
that, and get the empoyee's name. Also, make
sure to keep your copy of the form that has the
date and time that they accepted the packages.
Armed with that, it'll be a lot harder for them to
deny a damage claim. And even if they do,
at least you'll have some evidence to present
when you persue it in small claims court.

Something to think about.

The RF spectrum is a limited resource. It must be regulated. Here is a quick list of a few other limited resources under regulation:

Land;
Water;
Air;
Mining products;
Forests;

Of course there is little harm if only a few people chop down a tree or two, but if everybody did so there wouldn't be any trees. Using a similar analogy, the land would be useless from pollution and strip-mining, the water would be poisonous and taste like gasoline, most people would die from cancer and bronchitus, and the few survivors would be knee-deep in garbage.

So how tight must the restrictions be? As tight as necessary to maintain the integrity of the resource. IMO, the FCC has already let this pirate problem get out of hand, because it will take a very long time to correct the problem and re-establish control over the spectrum. If they wait too long the remaining control will be lost, and the resulting flood of RF noise will make most electronic devices useless.

Flame away.

Rough times for you illegal CBers lately, huh? Like all criminals, you fellas could align yourselves with other criminals like the Mafia, the Drug cartels or the Porn Industry.

I'm not kiddin. Thinks about it. If you can show a profit to these other crime lords they may be willing to take the business over and offer you protection from the Feds. When you get busted they will bail you out. And if anyone messes with you they will be eliminated.

One thing about the pros, they do not waste time arguing about legalities. They simply accept the fact the they are engaged in illegal activity and act accordingly. You CB types could stand to use them as an example.

Worth a thought.

Hi all,

I have a couple old mobile CB's and before I just trash them, I'm wondering if anyone wants them.

One is an old HyGain 23 channel, the other is a Realistic 40 channel with weather.

Anyone who offers enough to cover my trouble packing them up and the shipping cost can have them. I'll throw in an old SWR meter and a magnetic mount antenna too. No guarantees on working condition.

Send me an e-mail for more info. I have a digital cam too, if you want pics.

Many thanks,
Vic Rollins

Let me try one on you, Sparky. Two key items:

a. You know how GPS works. Very closely coordinated time signals from at
least three satellites. And it does work!

b. The ARRL annual frequency measuring tests came to a grinding halt when people learned to use WWVL as a time base on their scopes. They were more accurate than the firm hired to do the test. And we are talking something like five or six decimal places.

So in theory at least, three remote receivers feeding a common analysis point should be able to nail any station in town in milliseconds. Two would be adequate for most situations. Calibration might be a bit interesting the first time but the net result would be GPS backwards. With the whole system locked to a common time base, analyzing differences among the three signals should put you right on the nuts.

This is the original poster of this ad. I have shipped these amps before. 4 of them to be exact. I do ship the tubes separately. I triple box the main unit with foam around each box as well as foam packed tightly inside the amp around the transformer. I have dropped them 3 feet to the concrete floor on the transformer corner with no damage (just to test the packing). I'm not saying damage is impossible.......I'm just saying when I ship them I pack them well. LZBoyz that sometimes posts on this group can vouch for the shipping of the SB220's. He is several states away from me and we have had no problems sending them back and fourth. I also Ebay and have shipped other large amps as well as very large power supplies to some other posters on this group and some of these supplies weighed around 80lbs. So far so good, no damage. The majority of my 242 feedbacks on Ebay state that the item was packed very well.

Good point about buying Heavy items over the net but just wanted to assure anyone interested in my amp that it will be packed very well.

I too have bought some amps that were damaged when shipped.....that is why I go to such extremes to pack my items so well.

Bill E.....I too had to straighten a Heathkit on that back corner that was shipped to me. I used two fuse holders instead of the breakers as I had them on hand and the breakers were destroyed. It turned out nice and looks factory (unless you realize there is supposed to be breakers there). I had to totally remove the transformer to beat the case straight but it came out good in the end.........Point well made though Bill.

I wonder why you have to use Newsranger now?
Could it be, because of the complaints to Concentric
AOL, etc, etc.
Please pay close attention to #2, if you follow it
I'm sure that no one will complain. So please post
to topics of the newsgroup, Twisted is not to topic.

The Landshark

>Dick N�BK

Using only two receiving stations does leave a 'shadow' perpendicular
to the line between the two stations. Calibration was slow and
tedious. I can locate any transmission within three seconds, and the
time delay is only because of the low-pass filter on the output of the
phase-discriminator. I have a few old computers, so I am working on an
assembly program that will eliminate the low-pass altogether, as well
as the analog phone link. The system should be able to DF a
transmission almost instantaneously, do so as often as squelch breaks,
log all transmission times and locations, and I am even working on
automatically logging signal strength. My assembly is a bit rusty, so
this system will take a while to implement.

Now the big question: am I doing this just to bust CBers? Nope. I was
asked to explore the feasability of such a system by the administrator
of a nearby county. The idea is to keep track of county vehicles,
cops, fire, forest, etc, independant of the GPS system. So far this
system works pretty well, but I am disappointed with the design of the
antenna array -- it is very frequency-specific.

No flame. But do you realize that you have just made a legal offer?
This means that if someone accepts your offer before it is withdrawn,
you are legally obligated to provide the goods, even if your intention
was only to make a joke.

Spock had some great logic that would shed some light into the current controversy. He said,"The needs of the many outweight the needs of the few or the one".
If we apply Spocks wisdom to the rf spectrum we get,"The needs of the many(cber's) outweight the needs of the few(hams) or the one(# of hams left on 10m).
10M is now for all practical purposes a cb band. Truck drivers will soon be looking at the 6 meter band because 10m is getting crowded.And we will take that too and keep it.

You need to watch Star Trek a bit more closely -- the point of the
movie was to disprove that 'proverb'.

You are forgetting one very important detail: Spock is a fictional
character. His logic is only as valid as the writers want it to be.
And for the movie they didn't want it to be valid at all so they could
build a plot line around it.

You don't learn logic by watching Star Trek. But did you catch John
Laroquette as a Klingon? What a gas!!!

1391. Re: Browning Golden Eagle MII

Newsgroup: rec.radio.cb

Hello Web Doc: Doesn't Maycom or something like that have a Browning repair service?

In the 1960's and 1970's there use to be a guy by the name of CC in Derks Arkansas that had a Browning Golden Eagle kicking a Maverick 250, driving a amp with 4 each 572B's feeding a Moonraker 4 beam antenna. CC use to shut down the west coast with his station, and in the early morning you could hear him talking to stations in Southern Mexico, and some fishing boats. As the skip got stronger, CC talked to the Boys in San Diego, Long Beach, and then the San Fernanndo Valley, and then on to the northern part of the country.

CC also had a Johnson Viking Ranger II that kicked a larger linear amplifier, that he said he preferred to run, do to the fact it was larger and gave the operator the feeling that the transmitter was a Voice of America Station. But all the skip stations knew CC buy his distinctive "Gink Gonk" Browning Eagle sound, and asked him to run the Browning because of its better sounding audio.

The old man (my Farther) had bought a 104 foot Navy surplus long range patrol boat, that was converted to a commercial fishing boat. We fished the Pacific, and Pacific North West in the summer months for Tuna. Dear old Dad had converted a old pre-WWII Bendex Direction Finder gear box and heading compass card indicator, to a CB Quad 2 element beam antenna so that we could DF (Direction Find) the fishing boats using the CB Radios (called Mickey Mouse Radios, by the fishermen.) that where thought to have a very short range. The CB Radio conversations could be intercepted and DF'ed over 50 miles on the open sea's. Boats would give there fish catch totals, and Dad would DF the stations and run all night if necessary to find them. And we did intercept them, DF them, and find them, to increase our catch the next day. But gathered Intel such as this was never spoken about, as it should never be disclosed.

One day in ruff seas the rudder steering cable had cut thru the 32 volt positive wire, a heavy 04 gauge wire, coming from a set of batters. As the rudder steering cable was now welded in half, steering the boat had to be done by engines that ran the two outside propellers.

A radio call, on the Marine Radio was to made to our partner boat, that wasn't listening to the Marine frequencies, and had fished out of CB Radio range.

CC's familiar "Gink Gonk" on the CB Radio was a pleasure to hear. The old man called CC, and CC called out to our partner boat to come up on the Marine frequencies, being out of range from the CB Skip. Repairs where made, and we could now steer the boat again from the rudder steering well in the wheel house.

I can still hear CC in Arkansas, in my mind with his very dismissive Browning Eagle "Gink Gonk ..... this is CC in Arkansas".

I'll put together a neat story of the fishing boat, and Cb Radio later on .....

Sounds like you have a county administrator with a bit more imagination than the usual one. The CA in a previous residence used to chide the Sheriff saying all his people wanted to do was drive across fields. Funny ha ha until we were on a lost kid search in a wild area. When the kid came out of the woods, the deputy had to be restrained to keep him from using his Dodge Diplomat for an imitation HumVee.

I have not a clue how you get around the antenna problem. If your Assembly is as bad as mine, a lot of water is going to pass under the bridge before this happens.

Yeah, busting the rebels without clues stirs up a storm of apathy.

Dick

1397. OT: Something to reflect on for mothers day

Newsgroup: rec.radio.cb
Date: 2001-05-13 13:03:07 UTC
From: WebDoc <arcweb@bnnorth.net>
Message-ID: <3AFE860B.E6D0416@bnnorth.net>
Source record: 81647

Someone sent this to me, I printed it out for my mother, for 5 minutes
lets forget about all the bickering and think about where we came from
and the women that took care of all of us.

WebDoc

Before I was a Mom
I made and ate hot meals.
I had unstained clothing.
I had quiet conversations on the phone.
Before I was a Mom
I slept as late as I wanted
And never worried about how late I got into bed.
I brushed my hair and my teeth everyday.
Before I was a Mom
I cleaned my house each day.
I never tripped over toys or forgot words to lullabies.
Before I was a Mom
I didn't worry whether or not my plants were poisonous.
I never thought about immunizations.
Before I was a Mom
I had never been puked on
Pooped on
Spit on
Chewed on
Peed on
Or pinched by tiny fingers
Before I was a Mom
I had complete control of my mind
My thoughts
My body
And I slept all night and got plenty of rest.
Before I was a Mom
I never held down a screaming child
So that doctors could do tests or give shots.
I never looked into teary eyes and cried.
I never got gloriously happy over a simple grin.
I never sat up late hours at night watching a baby sleep.
Before I was a Mom
I never held a sleeping baby just because I didn't want to put her
down.
I never felt my heart break into a million pieces
When I couldn't stop the hurt.
I never knew that something so small could affect my life so much.
I never knew that I could love someone so much.

I never knew what love at first sight really meant.
I never knew I would love being a Mom.
Before I was a Mom
I didn't know the feeling of having my heart outside my body.
I didn't know how special it could feel to feed a hungry baby.
I didn't know that bond between a mother and her child.
I didn't know that something so small could make me feel so important.
Before I was a Mom
I had never gotten up in the middle of the night.
Every 10 minutes to make sure all was okay
I had never known the warmth
The joy
The love
The heartache
The wonderment
I didn't know I was capable of feeling so much
Before I was a Mom.

This is what kind of group this is:

"From: Yahoo! Groups Notification <notify@yahoogroups.com>
To: upplus@hotmail.com
Subject: Request to join radio-cb denied
Date: 13 May 2001 11:28:40 -0000

Hello,

The moderator of the radio-cb group has denied
your request for membership.

The moderator of each Yahoo! Groups group chooses whether to
restrict membership in his or her group. Moderators who
choose to restrict membership also choose whom to admit."

Syd must be clueless. <;

Hello & Good Morning Scott,
You might be right on Syd being clueless.
So, you then must try to inform him who you
are. Show him the Rec.Cb. Yahoo group, then
maybe he might understand that you are not one
of the Hell raisers here.

The Landshark

Spelling is close enough, and yes, she was looking pretty good in
those furs. It really irked me that every time Spock was about to get
laid either Kirk or McCoy screwed it up for him.

>Diplomat for an imitation HumVee.

Not a good thing for their torsion-bar front suspensions.

>I have not a clue how you get around the antenna problem.

The best idea so far is to use trap dipoles, but I'm still looking.

> If your Assembly
>is as bad as mine, a lot of water is going to pass under the bridge before

Someone sent me an email and suggested I use a PIC instead. I looked
at a couple datasheets and it looks promising.

>Yeah, busting the rebels without clues stirs up a storm of apathy.

hehe....

Hey Sharky,
newsranger is VERY co-operative in getting rid of trash posters.
Just thought you might like to know (wink wink nod nod)
Train

I'm looking for a nice little mobil radio to run off a ps for my base setup. my max price i will spend is 200. are there any radio's that can cover 26-30 mhz besides the rci2950 where all you need to do is move a jumper or something? if not whats a good stock 40 channel radio? it must also have the noise limiter features. i was reading about the 40 dollar cobra radio and people say its not built very well.

Source record: 81913

pinsizedpekkerhead <nospam@newsranger.com> drooled:
i bet you wouldn't say that to his face dipstick. its real easy to get on
here and do the things you do because all you will ever do is hide behind
that keyboard.....why doncha be like me and mix it up.....shoot I suck
a dozen drippin dicks a day.....and I love it! pinhead is out.....

Well. you preach about being legal, so you should be legal yourself?
and YOU guys are ones to talk about beinf tattletales, after all how
many ebay auctions were cancled because of you? While I agree that
illegal radions, and amps should not be allowed or used, you can not
honestly expect anyone to respect your opinion or even listen to you if
you rant and rave and whine like a 3 y/o child. what goes around comes
around bub, and from what I have seen you guys have been asking for it
since the beginning if the year.

Then why not talk to your local congress critter, and to your arrl
people, and the fcc people, and have some sort of rules set that you
HAVE to show proof af amateur license to buy a amateur radio.... period.
Granted I am not a ham (YET) but I am looking for radios, shopping for
the best bang for the buck. I could have bought a nice ICOM dual band ht
from a friend of mine a few weeks ago at the spring SKYWARN refresher
class, but decided to wait. I don;lt need a amateur radio until I have
my license. and neither does anyone else. The bullshit about wanting to
listen, you want to listen by a SW reciever.

What a weekend! Went after Blacktip and returned with a feast. DX was good, but the action was better. Heard a lot of DX, but everytime the action would appear to lull and I would head to the radio, someone else would yell "Fish on." 12 miles out and my oh my!! Triple tails were hitting, but so were the 'Cuda and Reds. Mullet and Pinfish are worth their weight in gold when it's this hot. The Bayou and the Razorback were the loudest thing here all weekend. Ran into a shrimper from Corpus Christi near the Bottoms with a radio, name of the boat was "Veronica's Way". I gave him a whole crew, er, slew of names to listen for once he got back home, so ya'll listen up for "Captain Cole from the River Walk"
.

Hello,
Any particular reason why you have to have SO MANY channels?? If price is a factor, and you want the best performing radio for the money, I would suggest the Uniden Grant. It is easily modifed to cover 26.815~28.045. It has excellent audio quality, and and even better reciever. I personally own the Uniden Grant XL (the XL model has been replaced with the LT). The LT model is about $149.99 retail. A reputable CB shop will charge you about $50, to peak, and tune the radio, along with converting the PLL chip inside the radio, to cover the extra channels. The good thing about this radio, is it isn't outrageous on the purchase price, and can be upgraded at your own leasure. I bought mine about 7 years ago, and have never had a problem, or any complaints on how I sound. This is a good radio to buy when you are kind of new to the hobby. Going out and buying a Galaxy 99V, your first week on the air, is not a good idea. You will get discouraged with it, because there is just too many thing that you have to have right, just to talk. The Grant, on the other hand is a basic plane jane radio, that can grow into the hobby, along with you. You can talk on it stock for a while (it doesn't have to be converted). Peak it out when you're ready, add the channels, get a Frequency counter, If you like echo, or roger beep, you can get that too. Put in a high/low switch, then you're ready for an amplifier (if you choose to go that route)..

Hope everything works out for you...
Maniac

Sparky,
I figured you COULDN'T resist the header,lol! Anyway, I was mowing my lawn today, and I happened to come up with this rather unique revelation while the cut grass spewed from my riding lawn mower. Since I am a Government employee (no...NOT the FCC), and the majority of the time I access this newsgroup from work, theoretically you are PAYING me to be here! YES...it's YOUR tax-dollar hard at work. But then I got to thinkin'... how can a man(you) get on this NG and argue with me and then turn around and pay me to be here? I mean...am I missing something? OK...I'll work a little harder next week for you. NOT! But in all seriousness, you paid me around $500 last week to be here. And for that, I truly THANK YOU! Oh...since it's Sunday, I guess I'm on 'my' time now. But I was seriously thinking about working on Memorial Day (May 28) so YOU could pay me DOUBLE TIME AND A HALF to be here on these silly newsgroups. Ahhh...maybe I should just stay home and barbeque with the rest of America instead. Have a GREAT week Sparky, and check-out this site!

Hello & Good Evening,
While I must say that you do have a liberal policy for the
Usenet, I must lodge a complaint against this individual.
Not only is his header offensive in language, but
is on the verge of being slanderous against me. I
do not know this person, nor do I care for his
accusations concerning my sexuality.
Please research this person, he has had several
different ISP's, all have taken away his right to
post because of this type of language and activity.

Thank you very much for your support.

punisha-no-spam@cotse.com (Punisher Of KeyClowns)
You and your weeeeenie illegal pals are little BARNEY FIFE ASSHOLES that
TATTLE ON OTHER PEOPLE to their ISP's.

"Guess you got what was coming to you. Maybe you shouldn't have tried to
cause so much trash in here and kept the topic on radios and radio
related stuff instead of every post being profanity laden and off topic.
Your problem is you accuse everyone of radio misdeeds because of their
speech. Your blatant disregard for adhering to the TOS agreements is
what got you bounced, nothing else."

Are you proud of that?

"Proud that it was only a matter of time before you shot yourself in the
other claw and are now resigned to posting from only one domain, making
the killfile once again a useful tool for weeding out chickenhawks."

What happened to your BIG NASTY OUTLAW ATTITUDE?

"You have demonstrated more disregard for the rules, and more
importantly, respect, for the ng, your fellow hams, and yourself,
whether you realize it or not, than anyone else I have encountered on
the web, hands down."

I thought LAWS were meant to be broken? Why are you now a PUSSY TATTLE
TALE NERD BOY ASSWIPE????
Landshark....you pussy!

"Failure to stay on topic and elicit pertinent or semi-intelligent
responses to topics in ng duly noted. If you don't want to talk radio,
why not post to a law debate forum or something?"

Source record: 81673

That's because I don't care what they fabricate.
It just digs them a deeper hole with their ISP.
Again, while in the past I have had plenty of
"Illegal power at home" I have just moved
into our new custom built home, and really have
no desire to have an antenna on it, nor on my
motorcycle. So they can whine and cry all they
like, because I am as legal as they are. I do own
amps and radio's, but considering that I don't
even own an antenna to transmit anymore, well
that should be enough of an answer.

RedHat is simple to install, so is Mandrake, and Caldera, I use Mandrake
and SuSe for my workstations here at my home office, with 2 Sun Sparc
5's running Solaris 7 for my firewall and router. For those who are
HAMS, RedHat and Mandrake have some ham goodies included with the
package. and if you load linux on a windows machine to be dual bootable,
linux will run winblows programs under WINE.

and if bandwidth to d/l is a problem email me. maybe I can burn you a cd
and snail mail it to you

Source record: 81801

> Eitner -- helping CBers put another illegal amp on the air -- again.

For the time being I'm using this one myself.
However, someday, you may be right. I'll tire
of, and will have learned all I can, from this amp
and will likely sell it and move on to a grid-fed
ceramic tube amp. My goal, ultimately, is to
build my own amp using a liquid-cooled tube
and a fanless heat-exchanger. I want to set
a new standard for QUIETNESS in a base amp
that is at a high enough power level that con-
vection-cooled transistors are not as practical
a choice.

I guess that pisses you off, doesn't it? I bet you
were gnashing your teeth into powder as you
read it. The thought of that makes me happy.
The fact that you and others like you are unable
to stop me makes me happy too. Your pro-
clamonious words have absolutely zero effect
on me, what I do, or what I will do in the future.
I bet the realization of that gets you teeth grinding
again, doesn't it?

> Show us
> further ignorance with a curse word or two, Bill.

Oooh, accusing me of being ignorant--ouch.
Riddle me this: who's more ignorant? I can
do what you do (attempt to piss people off with
words), I'm better at it than you are, and
I'm not afraid of revealing my identity. You have
no verifyable identity, so you'll never be able to
prove that you can do what I can do in the
world of HF RF. Are you really upset about
what I do, or are you simply jealous of me
because you can't do what I can do? I believe
it's the latter. That's why you conceal your
identity.

So, with that, I'll grant you your wish as a
small consolation: Fuck you you anonymous,
worthless, chickenshit asshole.

You know what would totally SUCK? I mean, THEORETICALLY of course. (Since TALK is not illegal, free speech and all, just like CB mods and amplifier designs posted in this NG). Anyhow, what would REALLY SUCK BAD is if that picture of Twisty and his little boy molestees got accidentally posted to a whole SHITLOAD of chickenhawk/child abuser/molester websites -- with twisty's addy and landsharks addy on it. That THEORETICALLY would suck real bad, wouldn't it?

You know what would totally SUCK? I mean, THEORETICALLY of course. (Since TALK is not illegal, free speech and all, just like CB mods and amplifier designs posted in this NG). Anyhow, what would REALLY SUCK BAD is if that picture of Twisty and his little boy molestees got accidentally posted to a whole SHITLOAD of chickenhawk/child abuser/molester websites -- with twisty's addy and landsharks addy on it. That THEORETICALLY would suck real bad, wouldn't it?

Then you are doing it all wrong. Take a look at the Class E amp. It
runs at 70% efficiency or better and doesn't need cooling. And it is
less than half the size and a fraction of the weight of any equivalent
tube amp.

There are two key points to this whole discussion:
The buyer should expect nothing less than a high-
end packing job that will justify the full coverage
insurance that should be part of the deal when
shipping amps that are 50 pounds or more and/or
can really put out 1000 watts or more. And the
seller shouldn't be afraid of being up-front about
what it's going to take and how much it's going to
cost to pull this off. People want big amps and the
best deal at the time is usually in some other
state. Adequate packing, shipping, and insurance
seem like wasted money when the amp shows up
undamaged, but they are part and parcel to these
kinds of deals. All the parties involved need to get
used to being honest and forthcoming about this.
Both the guy I bought my amp from and myself
took this too lightly. We both lost in the long run
because of it.

And it's linear? If so, please aim me at some
engineering data for devices that provide loafing
legal limit+ power in any mode of operation with
70+% efficiency and no cooling required.

I clearly know what I think I know. You haven't proven
otherwise. Now that you've opened your mouth, it's
up to you to lead me to the "promissed land" of 70%+

efficiency and no noisy cooling. And even at that,
at a legal-limit+ output power level, 70% efficiency
doesn't negate the need for a higher than convection
efficiency cooling system. Look at the ARRL Handbook
specs for the amp I'm using right now. Their numbers
for an amp like mine (2220 watts in for 1500 watts out)
equate to an efficiency of over 67.5%. With that in mind,
your big 70% claim isn't that big a deal is it?

If I wanted to be the big CBer, I could bias my amp into
the Class C range and see efficiency numbers in excess
of 70% in the AM mode. Think about that and get back
to me about who doesn't know half as much as they think
they do.

Aim yourself. Ever hear of a little invention called the 'search
engine'?

>> It looks like the table has turned, now that everyone can see that you

Not to you. But then you didn't know about Class E amps, did you? And
you are probably not aware that this 'standard' for quiet operation
you wish to set has already existed for quite a long time. It's called
a 'cooling tube' or 'cooling tower' and the concept works quite well.
So well, in fact, they use it for nuclear reactors.

> Now that you've opened your mouth, it's
> up to you to lead me to the "promissed land" of 70%+

I have already told you what to look for and where to look, I'm not
going to spoon-feed it to you.

> And even at that,
> at a legal-limit+ output power level, 70% efficiency
> doesn't negate the need for a higher than convection
> efficiency cooling system.

No it doesn't, but when typical efficiencies are around 85%, and when
you consider that part of the loss happens in the filter, the most you
would need for 1500 watts is (maybe) a small muffin fan. That sure
kicks any Class C amp up and down the block.

> Look at the ARRL Handbook

Yep. Is that 1500 watts average or peak?

> If I wanted to be the big CBer, I could bias my amp into

And just how are you going to make a Class C amp linear? I don't know what amp you have, but if it's solid-state then it is most likely an AB or B push-pull. Because of the low output impedance of the transistors, the Q of your output stage is somewhat limited (read: worthless), and you will end up converting half your input power to garbage and dumping it at the filter. You think you will get %70 efficiency? Think again.

Face it Bill, you don't know squat.

If I remember right when I checked this out myself some time ago there were a number of Windows CAD programs that would not run successfully with WINE. So has anything changed in the past year or so along that front? I had a book mark to the WINE page at one time but deleted it at some point.

Hello & Good Evening,
I wish to bring to your attention again this individual
that use's obscene, abusive, libelous,defamatory, hateful
language on his post. Not only does he do that, but also
is flooding the newsgroup with those types of post, not
only do you see one of that type, but 5 to 10.
Please note that I have included a complete post
including headers.
A record will be kept concerning each post &
correspondences with you.

Thank you for your help in this matter.

A.E. are typical ignorant CB pirates <nospam@newsranger.com> wrote:

:Spoken like a true roger-beeping CB ignoramus. Look retardo, EVERY commerical
:ham rig comes able to transmit above and below the ham bands, right out of the
:box. It has been this way for time immemorial. Hams don't transmit out of band
:simply because they have a brain and are not ignorant redneck CBers. Amps are
:rated above 1500 watts PEP to give the design some headroom and minimize
:component stress. Course you CB children see rf power ratings and you INSTANTLY

:think "Yeah, all knobs to the RIGHT!" Wise up, dink boy.

Really? There are problem Hams, just like there are problem CBers.
Read the FCC reports of recent actions. It seems quite a few of them
were against Hams who had freebanded to the CB band and were causing
havoc there.

To put it simply - There are Hams that operate illegally, and there are
CBers who operate illegally. Neither radio service is anywhere close to
being law abiding - although most Hams do tend to obey their respective
rules more closely. But then, Hams have far more liberal regulations.
Maybe if CBers had more liberal rules, then maybe a larger percentage
would obey them.

Well, I can't comment about the HTML, as it doesn't bother me, I can see it just fine, though I know that it's not supposed to be used...

In any case, he could be online the same way I am.. I have no phone... But I'm here aren't I? Got me a cable modem... No phone line required... Go figure... Not that I don't have a phone, I have a PCS phone. Don't own a regular phone, as it is not only more convenient to use my PCS, but it's also cheaper than the regular, strapped to the house and go nowhere, phone... What a world we live in...

http://community.webtv.net/twistedhed/WeekendSkipfish
  What a weekend! Went after Blacktip and returned with a feast. DX
was good, but the action was better. Heard a lot of DX, but everytime
the action would appear to lull and I would head to the radio, someone
else would yell "Fish on." 12 miles out and my oh my!! Triple tails were
hitting, but so were the 'Cuda and Reds. Mullet and Pinfish are worth
their weight in gold when it's this hot. The Bayou and the Razorback
were the loudest thing here all weekend. Ran into a shrimper from Corpus
Christi near the Bottoms with a radio, name of the boat was "Veronica's
Way". I gave him a whole crew, er, slew of names to listen for once he
got back home, so ya'll listen up for "Captain Cole from the River Walk"

You know what would totally SUCK? I mean, THEORETICALLY of course.
(Since TALK
is not illegal, free speech and all, just like CB mods and amplifier
designs
posted in this NG). Anyhow, what would REALLY SUCK BAD is if that
picture of
Twisty and his little boy molestees got accidentally posted to a whole
SHITLOAD

of chickenhawk/child abuser/molester websites -- with twisty's addy
and
landsharks addy on it. That THEORETICALLY would suck real bad, wouldn't
it?
-

LMAO! You don't get it. This is a radio related room. Six months of impotent threats from you and you are still beside yourself attempting to upset me. There is nothing you can do. You want to impress me? Key up and say something on the air. Everything else is fodder.

I can vouch for the packaging that Mike uses to ship these things in. As a matter of fact, I was surprised at how well packed it was. I didn`t think I was ever going to get into the interior. A chain saw might have help a little !!!!! lol.
Rest assured, it will be extremely well packaged.
BTW, you can take Mike for his word.
Very honest and trustworthy person.
I highly recommend him and the 220 amp if you are looking for one.

There are others on this NG that have received shipments from him that were packaged just as well, but I think that has already been covered.

Keep you powder dry,
Randy

You see I don't have a problem with
them posting, only when they fabricate lies,
mass postings, vile, vulgar, headers and
content.
If these three would do civil posts,
hell, even ones that just cry "Illegal" I don't
think I would have a problem with them.
Doc, Jerry among others don't like illegal
operations, but at the same time they don't
rant & rave about it.
But when you three start by Calling people
criminals, crap like that, Christ, would you
yell at a person Jay walking, speeding, running
a stop sign on a bicycle "You're a God Dam
Criminal?" I doubt it, because you know that
person would come over and confront you
for that.
Here, where you can type, Anon id and such,
you have the option to be that person that you
can't be in public, a BMOC.
So ramble on you three, again post to topic,
no vile, vulgar, harassing types of posts, and you
will find that most people can't turn you in for
violating you're TOS.

The Landshark

Okay, you didn't want to discuss it, you just wanted
make your splashy comment and get out before you
have to show what you really know.

> >> It looks like the table has turned, now that everyone can see that you
> >> don't know half as much as you think you do.
> >
> > I clearly know what I think I know. You haven't proven
> > otherwise.
>
> Not to you. But then you didn't know about Class E amps, did you?

I knew of them. My concern lies in the appropriateness.

> And
> you are probably not aware that this 'standard' for quiet operation
> you wish to set has already existed for quite a long time. It's called
> a 'cooling tube' or 'cooling tower' and the concept works quite well.
> So well, in fact, they use it for nuclear reactors.

That just makes my job that much easier. And again,
just because something exists that doesn't justify its
appropriateness for a particular job. My approach
to quietness doesn't have to be by way of increased
efficiency. And the technology necessary to achieve
my goal already exists. Those two moot points were
unnecessarilly brought up by you. However, I was
willing to discuss it, but you're not, so it really doesn't
matter.

> Face it Bill, you don't know squat.

I know plenty. The fact that all you wanted to do here
was take your pot shot and run makes you look worse
than you've attempted to make me appear.

This newsgroup could use some intelligent discussion,
but if all that's left here are hair pullers and stick pokers,
it's no wonder it's the mess that it is.

Bye bye Sparky (another one hiding behind a screen
name). If you ever want to discuss this without it being
a rivalry, I'm not hard to find (I don't use a screen names
or have multiple ISPs and/or e-mail accounts).

would you rather have all the crap? the 100+ sometimes 400+ posts a day?
don't like it change usenet providers. And for those who DO abuse
usenet, when you abuse you will be reported.

>I do not own anymore illegal equipment. So have fun. That is old news and
>old pictures.

So your saying we will never hear about you in an Illegal Keyclown event. We won't see you pull up to the line ever again. You sold all your keyclown mod books? No more amp building experiments? All the money you sunk into that ghetto cruising keyclown mobile is history? Now why don't I believe you. Because you arent credible at all. But Why the sudden change ? You are a KeyClown 4 Life i thought.
Or are you just directign the heat away from yourself.

we know there are more its not real hard peakaboo it just takes time to reasearch the posts. Quite frankly you arent worthy of that much time, I see then reality is you are always hiding your illegal keyclown ways trying not to get caught. If the Govt is watching you can change your name a million times you aren't fooling them, just yourself.

Why do I care? hrmmm lets see. I am a network administrator, could that
be a reason why network abuse bothers me? Network abuse offends me as
much as illegal radios offends doug and his bunch, and if they can get
LEGAL radios removed from ebay because they are so paranoid, why do you
whine because theyget removed when they ARE abusing?

Pot = Kettle = Black

I'll discuss it all you want as long as you have some background on
the subject. Otherwise it's like discussing calculus with a
third-grader. When you are up to speed let me know.

>> >> It looks like the table has turned, now that everyone can see that you

How so? The high efficiency means less dissapation, which can actually
eliminate the need for active cooling.

>> And
>> you are probably not aware that this 'standard' for quiet operation

It sure helps if you can reduce or eliminate the source of the
problem.

> And the technology necessary to achieve
> my goal already exists. Those two moot points were
> unnecessarilly brought up by you. However, I was
> willing to discuss it, but you're not, so it really doesn't
> matter.

Like I said, I will discuss it all you want. But like I also said, you need to look at the source of the problem. The cause of the noise is the inefficiency of the amp. Wasted energy is dissapated, requiring a method of cooling. You want to trade the fans for thermocouples, but you failed to realize that you need fans on the other side of the thermocouples or they will be ruined. And this doesn't make any sense because if you are going to use fans anyway. Instead of dumping another 15 to 30 amps into the thermocouples, plus a couple more to pump the cooling fluid, why not start at the beginning and improve the efficiency, or didn't you think about that?

>> Face it Bill, you don't know squat.

What happened to biasing your transistor rig for Class C?

I just like to listen to people that talk out of band, I can do that with my shortwave radio anyway I guess. i currently have a 2950 i modified and tuned up myself but there is some sort of problem with my selector knob although not a big deal it ticks me off. so I will probably be selling this radio and get a 2950dx or a grant lt like you suggested. i don't trust cb shops to mod my radios. i like to do it myself if i can. thank you for the help.

. Why should anyone have to change usenet providers because you say so? I guess you never heard of a NG filter. i don't care if there are 1000 posts a day, and if there is I don't have to read them If I see a duplicate post I don't read it what is so hard about that? You act like you have to open 100's of letters by hand or something. You see a name or post you don't like you don't read. It is that simple or better yet block them out(filter) on your end. Bunch of whining tattletales

==========
Where did I ask if you cared? I don't know your the network administrator
you
tell us if it bothers you

>Network abuse offends me as
> much as illegal radios offends doug and his bunch, and if they can get
> LEGAL radios removed from ebay because they are so paranoid, why do you
> whine because theyget removed when they ARE abusing?
==========
I don't whine about anything you may want to rephrase, my point is others
from the same usenet provider will be shut out because of 1 guy post
something you don't like thats not right you seem to think it is.

>
> Pot = Kettle = Black
==========
You want to suppress people who say things against what you believe. I think
the above statement fits you to a T.

Well it's called incentive. it happens all the time. ever go on IRC? if so you might have seen people get what is called a G-Line. It is a global ban from all the irc servers on that network. When an abuser is caught they get a user@ip specific gline and their ISP gets a abuse email, if the user continues to abuse, or evade glines, then a wider ban is set, do innocent users get caught? Sure, then these innocent users complain to their isp and the abusers account is revoked. So when the provider in question wants to take it's services and customers seriously they will take the abusers offences seriously. If the ISP does NOT take the abusers seriously it just proves that they do not care about the abuse others have to suffer, that they only care about a simple dollar, and in that case they are not a good ISP. Undernet had almost the ENTIRE country of malasia banned for a long time because they had no laws regarding cybercime (malicious spreading of virii, DOS attacks, hacking ect.) they made absolutely no efforts to stop these abusers. Is it fair? Maybe not to you, but to the many many people who suffered DOS attacks, hack attempts, virii contamination it was justifiable.

So back to this, the innocent usrs can EASILY change news providers, heck mailandnews.com carries this group and is free, but they also have a AUP (Acceptable User Policy) and if you break the rules there you will be removed as well, free news access is easy to find so your statement about them being caught unfairly doesnlt cut it. And instead of complaining about it, do something about it. like the old expression if you don;t like the conversation on the radio, change channels, and if that doesn;t work there is always the power switch.

Abuse is abuse is abuse. Whether it is abusing the airwaves with illegal amps and export radios, or whether it is abuseing the internet bandwidth with spam, flooded posts, sick porn ect. it is still abuse!!! One person complaining and raising a fuss about people abusing the airwaves and abusing the internet to make his point is NO DIFFERENT than the ones they are compplaining about (did you realize that the FCC also oversees the internet in the US?). So abusing the internet, newsgroups ect. is ALSO a FCC violation yet these people are complaining about FCC violations? GET REAL!!!! Then too, you have these people sending emails right and left to Ebay getting auction items removed, this includes LEGAL NON MODIFIED equiptment, and this doesn't hurt harmless innocent people?

Once again----- Pot - Kettle - Black

fuck off
> and N8 to kiss your ass.

That's correct, I have used some colorful metaphors
to get my point across on you three's absurdness.
But, never in a header, and never accusing someone
of some sort of sex act, like you three do all the time.

(Disclaimer) If I have, I apologize to that person for the
poor choice in actions that I took.

>We can produce some pretty hot stuff on you when you
> were defending your "right to be illegal".

Please feel free. I still beleive that I'm in the right
to operate that way if I want too, of course since I have
had to move, and am really getting tired of it now.

> You have already proven that is not true. Why lie?

I haven't lied, it is you & one other that are fabricating
un-truths. You see, when you start making type
written statements that someone is a "Fag", " kiddie porn lover", "dick he
loves to suck on" then it is you who
are leaving yourself and your ISP & the posting service
liable for false accusations. So when you present those

types of facts to the ISP, Posting service and such,
well it is much cheaper to shut you down than it is
to continue letting you possibly lead them into a lawsuit.

like
> criminals.

Well golly ghee Mr. Wizard, The US Supreme court
just said it was illegal for someone to use medical marijuana,
but those people are out in the open selling, using, buying.
Kind along the same lines, the popular vote says and does
want the use, but the law says no, again our government
in action (wrong or right)

>

Hello Swizz,
By the way.....Love the new screen name.
Anyway back to the rest of the story... You are
correct, because one idiot is screwing it up, others
should not have to pay for it. I suggest you send
e-mail making that same suggestion, then maybe
they might work a little harder to keep those
"One Idiots" from doing that.

Just a quick note - sure, folks are entitled to their opinion. I am sure others, besides me, get a bit upset when porn is posted. Although there are filters, it sure is irritating when a dozen or so folks vent all of their mutual hatered out in the newsgroup. It wouldn't be so bad if the problem children only posted with one name and e-mail, but .... That aside, sure some don't agree with some of the radios and others don't agree with their position. I just can't figure out why some of the gross remarks and pics have to fly around. I have not (and will not) report anyone. However, that said, I can understand why some people are reporting some incidents as abuse.

NO you still don't get it. these fools broke the rules and got punished. I didn't do squat. I am just explaining that you are complaining for no reason. I will say this again. the antykeyclows are the ones I refer to when I said pot = kettle = black. They are complaining about people breaking fcc rules, yet THEY brake rules themselves so they are no better than the people they are complaining about. they got caught, they got spanked. end of story. and don't expect me to get all teary eyed and lose sleep because heir news provider blocked this newsgroup, news servers are a dime a dozen. and ALL news servers have rules, so if they move to another server and abuse, they'll get spanked again. thats not up to me, thats up to their providers, just like it is up to the fcc to bust people for breaking cb rules. All I am saying is that punisha (doug) whining about beeing reported to his isp is a joke, after all he was one of those people who emailed ebay and had LEGAL radios removed, he is also one of those who is breaking internet rules, and thusly FCC rules, so he is one to complain.

and BTW they didn;t block this group because people didn't like what
they were reading, they blocked it because of the flooded posts by doug,
same reason concentric.net (XO) dropped him. Floods to usenet and
email take up valuable bandwidth, you ever price bandwidth? do you own a
isp? do you own a web hosting service? If you did you'd know what I am
talking about and you wouldn;t have made the remark you did.

> different.
no the anti key clows are the hypocrites, they are the ones that broke
the isp's rules, THATS why they got in trouble. period. and they are so
worried about illegal operators breaking FCC regulations, in the US the
FCC has oversight over the internet. and as I have said before. the
innocent users can switch news providers, and I know for a fact there
were not that many "innocent" users caught, I have have been on this
group for years and I know what the rgulars use, the only ones caught by
this were the ones that were abusing.

Bill, When someone is talking to you they will ask your opinion. I don't use that provider I was making a point but since you butted into a conversation that wasn't directed to you, how would you like it if me and you use the same provider. I post stupid shit people complain, they shut out rec.radio you lose out as well because of me. Do you really think that is fair. That is just like throwing a big deadkey on a channel i like to talk on, oh sure you guys say I can turn the channel hell theres 40 others why should I have to, why don't you turn the channel is what I say. You condemn the keyclowns for getting ebay auctions cancelled but yet you want to act just like them and try and get there accounts cancelled. lets see who can one up the other You are a bunch of hypocrites thats what I say, you are what they are No different.

1651. Is there a Newsgroup, where one can find info?

Newsgroup: rec.radio.cb
Date: 2001-05-15 02:43:21 UTC
From: Lennie Beecroft <lbeecroft8041@home.com>
Message-ID: <dJ0M6.96599$2_.32086093@news3.rdc1.on.home.com>
Source record: 81778

Hi!,

I'm somewhat new to using newsgroups and I was wondering if anybody could help me out?.

Is there a Newsgroup or Website, where one can find information on vintage stereo's?.

I have here in my apartment, in fantastic shape, and it works well. It's a Kuba Stereo Hi-Fi { I think it's made by Telefunken,but not sure}. This Stereo is AM,FM,Shortwave, also has Phono that works and plays 16,33,45,and 78's [Remember Them]?. Phono needs a new pad, that records sit on.
Also has Magie Fan Indicator, that lets you see if you tuned the frequency in ok. All dial settings are in old scale of Megacycles & Kilocycles. In this order from the top are SP-Kc/s,AM-Kc/s,SW-Mc/s,FM-Mc/s.Push buttons for Stereo,Phono,Sp(?),Am,Fm, you can push down two buttons for tape, In the back has hook-ups for Antenna,Aux Speakers,and tape deck. The Future for this stereo was to the garbage
because In-Laws had no room for it, I offered my Father-In-Law $50.00 for it just to get it out of house and garbage, He wanted no money for it so I got it for free. On Shortwave I can receive between 16m and 31m (No antenna hooked-up) From 31m to 49m, nothing but static.

Anyway if anybody can help me out Thank-You
If you can't Thank-You for reading this post and Please pass this post on.

Reply to lbeecroft8041@home.com if you can help.

Thank-You

... about CB radio.

Most radio operators know that SSB is more efficient than AM, but many do not know just how much better A3J really is. When a 100 watt A3 (AM) carrier is modulated it emits 150 watts of RF. By eliminating the 100 watt carrier, the same information can be transmitted with only 50 watts. Since each sideband contains the same information, we can eliminate one of the sidebands. This will not only reduce the power to 25 watts, but it also uses half the bandwidth of an AM transmission. After all the math is done (RMS, peak, etc.), the power required by an SSB transmitter is only 11% of that needed by an AM radio to do the same job. This means your 12 legal watts are equivalent to 110 watts AM, and with twice the number of channels and half the noise!

Antenna height is touted as one of the most important things you can do to improve your range. This is true to a point. If the transmission is a direct wave (line-of-sight), and both antennas are 15 feet off the ground will have a range of about 11 miles. But if the antennas are raised to 50 feet above ground the range is only increased to 20 miles. And this assumes a smooth terrain with no hills or buildings. If the antenna is only a few feet above the ground, such as a mobile station, the range depends primarily on the ground wave. The ground wave can be improved greatly by the use of directional antennas. A directional antenna can take all the power and send it in one direction. Theoretically, a 1 watt signal narrowed to 1 degree of arc has the same effect as transmitting with 360 watts. Apply this to a CB SSB transmitter, and the station can have an effective radiated power (ERP) of almost 40,000 (forty-thousand) watts.

But a ground wave does not propgate very well at 27MHz, and since atmospheric skip is unreliable at the same frequency, the band is not a very good choice for any long-distance communication. This is why the CB was limited to such low power and was considered useless for commercial purposes. However, for short-range communications it can be very effective for use by many people, for both commercial and private purposes. But this is only true if the band is not molested by a few idiots with their squawk-boxes.

I do tend to agree, however, that CB radio has too many legal restrictions. But that's the law. Civil disobedience -- a-la Henry David Thoreau -- doesn't hold water as long as legal alternatives remain untried. If I'm interested in changing the CB laws I have several different routes to take instead of just ignoring them:

1) Form an organization similar to the NRA to oppose the restrictions on wireless communications;

2) Initiate a petition to change CB restrictions or establish new regulations through general elections;

3) Form a CB lobby to influence Congress and the FCC;

4) Establish a cooperative relationship with other organizations, such as the ARRL, the NRA, and the Teamster's Union;

5) Begin a public information campaign to gain support, stimulate interest; quiet misunderstandings and resolve issues.

6) Seek international support;

7) Convince a celebrity spokesperson to support the effort.

These are just a few possibilities. They are all legal, and they have all been proven effective at changing laws. Now let's compare this with the 'freebander' method:

1) Pumping gobs of power;

2) Transmitting off freq and in other bands;

3) Splattering harmonics that interfere with peaceful communications;

4) Keydowns;

5) Cursing and swearing;

6) Whining about how 'big brother' oppresses radio pirates;

7) Pissing people off.

Of course, the alternative would be to just get a license, or to learn how to enjoy using the CB within it's restrictions and intended purpose. It would certainly be much easier to do either, and there wouldn't be all this ruckus on the air or in the ng. In that respect, any pirate deserves any abuse they get for operating illegally, since they are the ones that started all the problems.

Even if restrictions were loosened there would be a segment of the population that will do what they want regardless, and then complain that they don't have any rights. Well, everyone likes to use the speeding analogy, so I'll use it too: If a driver likes to drive 75mph on the sidewalk, shut him down. Of course he will use a lame defense, like "Nobody was on the sidewalk, so why can't I drive there?" or "The streets were too crowded." Yeah, like a judge, or any other reasonable human being, can't see through this argument. The funny thing here is that driving 75mph on the sidewalk STILL won't get you a fine as large as a radio pirate can get. If the punishment reflects the severity of the crime, then stealing the airwaves must be much more severe than speeding, spitting on the sidewalk, jaywalking, or a host of other minor infractions with which pirates have equivocated their own crimes.

"The idiot driver must go to court," the pirate points out, "but the FCC won't let you into a courtroom." There are a few differences. Motor vehicle operator regulations are largely left to the individual states. Many states can revoke your driving license for failing to take a breath-alyzer when requested, no court required. This has been upheld by the Federal courts because the proof is very nearly irrefutable. And because of that, any appeal of the action is an option that is rarely taken. This is nearly identical with FCC regs, since the proof that is gathered prior to legal action (which is almost always preceeded by a warning) is very nearly irrefutable. And again an appeal of the action can be made, but rarely happens.

The pirates are a very small minority, because the band, as well as the entire RF spectrum, belongs to every citizen whether they use it or not. It does not belong to those that abuse their citizenship by stealing public property.

1654. Ten meter incursions

Newsgroup: rec.radio.cb
Date: 2001-05-15 03:13:53 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3B009EF1.4AE9@bellsouth.net>
Source record: 81781

I was reading the rain report today and ran across the following. Seems the defense of the 10 meter line has begun! Not to aggravate anyone, I am encouraged by such warning notices. If he ignores it like Flippo (AKA Rabbit Ears) did and continues to operate out of band, he will regret it. I don't agree with all the "KeyClown", "Anti-KeyClown" stuff, but I am glad to see that enforcement HAS returned (Hollingsworth refers to it as FCC's being AWOL from enforcement during the past 10 years). Mr. H also spoke about the 10 meter "bandits" a couple weeks ago at the Spartanburg, SC hamfest. I see he meant business.

CERTIFIED MAILï¿½RETURN RECEIPT
REQUESTED

Mr. George D. Cairns

705 East Church Road

Waldron, Arkansas 72958

SUBJECT: WARNING
NOTICEï¿½UNLICENSED RADIO
OPERATION

Dear Mr. Cairns:

The Commission has received evidence
that you have been operating radio
transmitting without a license on
frequencies in the Ten Meter Amateur
band and on frequencies near 30 MHz.

Please be advised that operation of
radio transmitting equipment without
a license is a violation of Section 301
of the Communications Act of 1934, as
amended, 47 U.S.C. Section 301, and
will subject you to fine or
imprisonment, as well as an in rem
seizure of radio transmitting
equipment.

You are requested to contact me at
717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel

I wonder if those who are more familiar with new CB hardware have noticed
that newer gear is a lot harder to 'open up'? That's a question, son, I
know from nothing but I have noted some postings here where, for example,
the newer version of the Cherokee lacks the pads and such to make the mod
easy. Have the jolly folks at Uniden et al received a message attached to a
brick??

In contrast to the 2510 (25 watts, ten meters) which seemed to have a market
only in truck stops, I note a new 1012 that does 10 and 12, and won't do 11
(or AM) without divine intervention. Even rigs like the Icom 706 that with
Ancient Modulation have to be aimed more at the CB market than the hams are
not easy to open.

Does anyone see the hand of Riley and his merry band at work?

Personally I feel that companies that make rados that can be moded to 11 meters should not be allowed to be sold in the US, same with "export" radios.

Greetings!

One point being missed, the "trail of events". There are some not-for-profit servers that have to deal with gigabytes of information.

When someone has to post eight messages, that are all the same, that is spam - and a waste of time. Worse is the commentary that is false or inflammatory, with intent to embarrass or harass others.

You need to see the router info for more information. The feed started at newsranger, but goes through a university as part of the router and possible gateway.

This type of conduct makes newsranger look bad, but the University providing a helping hand, can withdraw it at the same time due to the abuse. I'm sure it doesn't like to get flooded with hate-mail over someone that can't obey a simple TOS rule.

If you're giving access to a group of people that can't otherwise afford the cost of the connection, the person to blame is the spammer, not the rest of us that have followed the guidelines.

We observe a simple process of courtesy, as a right to express our own views while following a TOS agreement we agreed to be bound by when we signed up. That is why we are still out here.

Other things to notice, we stand up to our right of free speech just as loudly as those whom wish to silence that same right because of a conflict. If you can conduct yourself under the TOS agreement, then where is the conflict? If you have a problem with rec.radio.cb, then discuss it, not spam it.

When the spam is no longer a simple invitation, and goes right into a personal vendetta, then TOS needs to apply.

Don't blame us for the problems with that 1 person, you're forgetting the point that the rest of us are willing to agree to. A TOS that binds the user to a set of rules, or conduct - as set forth by the provider.

Blame the guy that posted the threats, not us for informing the ISP of the violations. You didn't do it, someone had to. Now you're stuck with the lack of access because you didn't stand up for your right to have access.

You mentioned innocent people being affected. We all are being affected by this.

We have had this problem in the NG for several years, and you think
that we are the bad guys? Is there something skewed here? What about
us that follow the rules and try to help when we can? Are we the
problem? Please re-think your statement below...

On Mon, 14 May 2001 22:29:26 GMT, while the modem was busy tying up
IRQ's with the Mouse, "SwizzleStick" <swizzle@readmyheader.com>
dissertated the following:

You are correct. All the manufacturers are moving in this direction. Some are more responsive than others. Radio Shack pulled a product from production because it was too easy to move to 11 Meters. The new 10-Meter radio is so tight that a mod has yet to be found.

The last time I looked someone working skip on 27.415 did not endanger the general public. Get off your high horse and get a new hobby. No one needs you to come to a CB newsgroup and tell them how bad they are because they talk to NY from CA using a peaked out radio running 25 watts.

Hey you can build your very own amplifier right out of the 2001 ARRL hand book for CB! You can buy electronic kit HFAMP1,2 & 3 for about $100 from Mouser Electronics and make some coils from Amidon for $12. It has a wonderful built in low pass filter. Make sure you run it at 24 volts for the best stability and so you don't overdrive the RF amps. All you need is a soldering iron and the ability to wrap some wires around the cores!

If you don't want to go to the trouble buy a ICOM 718 and cut a diode and now you can operate from 1.8 to 30 MHz with 5 to 100 watts. You can then upgrade to the ICOM HF amp and run 1500 watts PEP for those hard to finish QSO's. Just don't operate on the ham bands or any .gov freq's and no one will care.

Honestly people screaming about peaked out CB's have their head up their ass.

I think you CBers will enjoy this!

--
Best Regards,

Keith (Use Reply-to for email)

"Netscape had what the government would consider a monopoly in
the market for Internet browsers, until the great Satan,
Microsoft, came along." M$ attorney John Warden, 20 October 1998

From 1983-1985 I was employed as an FCC Watch Officer at both the Washington, D.C. and Laurel MD field office performing monitoring duties from DC through Light. Being a ham and having a VERY warm spot in my heart for hams, I used to make a special effort to 'look after' the Amateur Bands trying to help clean up the messes, interference and other problems that were rampant.

Because of that I also used to hear lots of things that were technically violations but it was obvious it was unintentional and nonmalicious - such as 2nd harmonic radiation like I was cited for. I used to informally contact people and let them know they had a problem and offer fixes (if I had info to offer) rather than cite them. It may not have been completely acording to 'Hoyle', but as a Watch Officer we had a great deal of lattitude in many cases as to what level of enforcement we took based on what the infraction was.

Anyway. I was working the Sunday 8AM - 4PM watch.It was Thanksgiving and the bands were REALLY quiet. I decided to go listen to the 7.4-7.5 MHz. range since 2nd harmonics were a problem in the 80M Novice bands. (This was in the days when xtal controlled, manually tuned transmitters were still used)

Sure enough, I heard a fairly strong 'CQ CQ' in the middle of the 7.4 Mhz band. Lo and behold it was a WN8 calling CQ. I went to the fundamental and nothing. OK. I looked him up in our database and got his name, addrress, and phone number. I thought.. 'It's Thanksgiving, it's unintentional, and I'd really like to help him out, so I'll call him and let him know he has a problem!'.

I call his house. The phone is answered by is wife. I say 'Hello, this is Mr. Reville with the Federal Communications Commission Monitoring Station in Laurel Maryland. May I speak with Mr. XXXX, please?" His wife said, "He's on the radio right now and he's busy." I said, "Yes, Ma'am. I know. That's why I'm calling. I'd like to speak with him please." She said she'd get him and then put down the phone.

Meanwhile the guy is still calling CQ with a good solid 2nd harmonic signal strength. Suddenly, in the middle of a CQ the signal disappears abruptly. After a few seconds the phone is picked and a I hear a male voice, hesitantly and somewhat softly say , "Hellllllllllo?...." I identified myself again and explain to him that I was monitoring his transmission and wanted to let him know he was on the wrong band. I suggested that he recheck his frequency using his local receiver to make sure he was on the fundamental and not the second harmonic frequency. There was a VERY VERY long and pregnant pause before he resumed talking to me. (I wonder if his wife had to do laundry for him after that phone call? HI)

He was, as you can expect, somewhat skeptical as to who I was until I described to him my location, the exact frequency he was on, what his exact transmissions were, and I played back the tape recording I had made. He then got REALLY excited and told me he was going to scrap the transmitter and was I going to give him a 'pink ticket'.

Laughing, I calmed him down and assured him that I was NOT going to cite him and I was REALLY the FCC and that I was not pulling his leg. I told him not to scrap the transmitter, just make sure he checked the fundamental frequency in the future. I told him I KNEW it was unintentional and that I wanted to help him keep out of truble in the future. He thanked me profusely and hung up.

He may not believe me and thinks it is a practical joke.. but yes.. there WERE FCC field folks who REALLY are from the Government and WERE there to help you!

Of course.. if you were violating a rule that needed a cite OR you gave the poor old FCC guy an unneeded hard time.. well.. let's just say Part 97 can be an awfully heavy tome to come crashing down on your head for being a hardbutt.

73

Ask me about the guy in southern usa we busted for running 25 KILOWATTS DC OUTPUT POWER on 75 meters. Yes, you read correctly. The output power of his amplifier was measured, KEYDOWN, at TWENTYFIVE THOUSAND WATTS DC OUTPUT POWER ...that's OUTPUT. When he ran SSB it was 50KW PEP OUTPUT. MOre than WBAL AM radio runs INPUT!. He was S7 in Anchorage alaska at 7pm in the evevning.

Ok.. Ok.. I've gotten about 10-15 EMAIL's all asking about the '25KW guy'. Well, here's the story. It's abit long, but I think you'll like it!) It occured in the middle of 1984.

(as the 'Dragnet' TV show used to say.. "The story you are about hear is true... Only the names (CALLS) have been omitted to protect the guilty!" and to keep me out of a libel suit! HI!)

Many of you recall the abominable conditions (QRM) between 3850-3890 kHz that was rampant back in the mid-80s' Yes, I know.. it's still there.. but back then it was REALLYYY bad! Several groups claimed total ownership of a frequency. They would wait till it was clear and then they'd all gang up and get on the frequency and that was that. No breakers.. no interlopers.. just

their own personal frequency for a roundtable which tended to cover all topics from A-Z. The FCC received myriads of complaints from ARRL, individual Amateurs, Clubs, private citizens, Congressmen, etc. We KNEW who they were, we KNEW where they lived, We KNEW what they were doing, but most of them knew 'just how far to creep towards the edge' to keep from getting cited, although every once in a while.. they'd slip.. then WHAMMO! off went the cites and the fines. Mostly for splatter, failure to ID, some tried to get cute with music, etc.

Of course, like all groups who KNOW what they are doing and ENJOY taunting the masses, they received their (un)fair share of QRM and disruptive attacks from 'other unlicensed or unidentified stations'. When this happened, all of the Watch Officers noticed one thing. The signal levels of almost all the major players would 'magically' increase in level far above what they normally would be expected to be. This would last until the external interference has gone away and then the signal levels would 'magically' return to a normal level.

The suspicisions, of course, of all us Watch Officers was the majority of them were using 'excessive power' above and beyond the legally allowed INPUT power of 1KW DC input power. (To a previous poster who questioned my usage of DC output power, please understand that the usages back then were to refer to any input/output RF power level that was unmodulated by anything as 'DC' input/output power as opposed to PEP power levels. Plus the law back then required measurments of input power in DC (unmodulated) measured in watts.)

You ask.. "How did we know what was 'normally expected to be' and what was 'abnormal' power levels indicating that overpower might be involved. Well, we knew where they were from HFDF and close in work. Since they ID'd we could check them easily. We knew, from monitoring and some field observations what antennas they were running. We knew their HAAT and other terrain features from topo maps (Like I said.. this was a long running investigation by the Enforcement branch. We were.. honestly.. SERIOUISLY interested in putting these bad guys off the air!) We knew from transcripts and monitoring what kinds of gear they ran and what kinds of amps they said they were running. They didn't hide their station configuration - they used to brag about it, in fact. Made our jobs easier and made confirmation easier on site.

The engineers did the math using all this data and figured out what the average signal level range (dB above the agreed upon reference level we all set our equipment at) each of the target stations SHOULD be reading. This range took into account expected path loss, referenced to common output levels of 600-750 watts using standard amp efficiencies and the like. (As I said.. we were SERIOUS about building a good, airtight, solid case and getting these guys! We needed good solid evidence to go with a search warrant and inspect the stations!)

We monitored their signals using spectrum analyzers and 'scopes which allowed us to look at their signals in real time. We could measure their peak signal levels above ambient band noise, signals above the rest of the operators, signal levels above our reference, etc. We noted that the main offenders were xx above the reference when they started. When the QRM came up the they

SUDDENLY increased anywhere from 10-40dB above that level, indicating that external power amplifiers had been kicked in and were operating. Ok.. Now you get the picture.

The case went like this. We noted that there was ONE specific station who seemed to exhibit the largest signal level increase when QRM provoked him. This station were targeted for on-site inspection based on the premise that if we nailed the most visible and arrogant offender for overpower, we had a better chance of him ACTUALLY being overpowered, having equipment that would support the charge, AND the publicity would send a chill down the spines of the rest of the gang and hopefully calm things down. The 'head shed' decided it was time, based on accumulated evidence, to devote the 'net resources to specifically target and gather evidence to allow the on-site engineers to do their job and get the US Atty to issue a search warrant. (THe FCC has no search or police powers to do so either at that time or to this day)

The entire 'net - 13 monitoring stations - stretching from Anchorage, AK, to Puerto Rico, to Maine, to Fla and all other points inside the continental US were tasked to monitor these guys every night from approx 630PM Eastern until about 11PM Eastern.

We all calibrated our spec analyzers to a common reference value. We had recorders running for audio transcripts. We had our DF headings. We were primed. Since most of us were hams we REALLY wanted these schnooks nailed.. big time. It bugged us too. So we were personally interested in making the best case possible and doing the best job. We were motivated! We did our jobs ethically and will regards to all the laws of evidence gathering.. but we had a personal stake in clocking these guys, but good! As I said.. motivated we were!

Ok.. Each night an onsite engineer located inside a monitoring van with gear parked near the homes of the targets. They were set to contact the local PD when the time came to execute the warrants. The guys came on, like clockwork, every night as they normally had. However.. THIS TIME..even with the QRM we noted NO excessive levels beyond what you'd expect from a good 1KW amp and a decent antenna. After a week we began to get concerned that they were wise or had been tipped off. Well.. along came Sunday.. THE DAY!.. They were all on the air talking. Along came some REALLY loud QRM. Suddenly... as we watched.. the target station's RF level went up so far it exceeded my spectrum analyzers top end setting. I had to crank in another 40dB of attenuation to bring it down.Where it had been 30 dB above the reference - about right for his KW and dipole - It was 70 dB.. yes.. you heard me right.. 70 dB ABOVE the reference and a good 40 dB above the highest level of anyone else. (Talk about an adrenaline rush!)

This continued. The guy in Anchorage said.. "I DON'T BELIEVE IT! HE'S S7 here! He went from barely S1 to S7!" (Remember this is 75M at about 630PM in the evening in the summertime!) 'The guy at our Texas station complained he had to crank in 40 dB of attenutation to bring the guy back onto the scale. I mentioned I had to crank in 30db to get him back and he was 70 dB above the reference. That was all we needed. We had probable cause, corroborating evidence, and a reason to execute the warrant. The engineer called the PD,

the PD came.. and 'KNOCK KNOCK KNOCK!" Entry was made and the guy 'suddenly went QRT and went off the air' (Wonder why? HEH). The other stations all began to chatter as to 'What happened to Wxxxxx?" "He was there and now he's gone!". (Our internal wireline 'net was full of typing indicating our enjoyment as to the fact that the target had been really surprized and the screens of our interlinked 'net all had a lot of comments and 'Hi HI' on the screens as we enjoyed the thoughts of the guys reaction when the FCC and the PD showed up! I still smile about it! HEH)

About 1/2 hour later a new voice appeared on the air, annouced the callsign of the station that we had excecuted the search warrant on, and proceeded to say (AHHH THE SWEET SOUNDS OF SUCCESS!!") 'This is the Federal Communications Commission. Station Wxxxxx is now going off the air. Test transmissions will be made for the purposes of verification of power output and other station operating parameters. This is the Federal Communications Commission closing station Wxxxxx".

You could have heard a pin drop on the frequency. Heh heh heh.. sounded like a solar flare had gone through 75 on that frequency. Then it started.. The conjecture.. the comments.. the surprise. and of course.. a lot of unidentified transmissions with people saying '' YEAH! GOTCHA!" "SERVES YOU RIGHT!" "ABOUT TIME!" "WAY TO GO FCC!" "KICK BUTT!" etc. etc.. not legal.. but you can appreciate we liked hearing it.

A few minutes later our net got a message on the screen that says 'FCC Engineer xxx making power output tests. Please take spec analyzer readings for case file. make sure time, freq, level and reference noted along with your station location and idenfication. Put in case file when done. Thanks & 73" signed xxxx FCC'

Signals came on air. Lower readings. Annouced as verbally 'FCC TEST this is Wxxxx. Test level one'. Unmodulated carrier for about 1 minute or so. We took measurments. Signal went away. Next test.. little higher but not more than a good 1KW amp would do. Same spiel. Next test was at the level observed during the QRM which provided the probable cause to inspect the station. The speil happened and ended with 'THIS IS THE FCC. TEST COMPLETE. STATION SECURED. THIS IS Wxxxxx signing off and clear". We heard no more.

Summary.. week later.. results came in. The guy was using a DRAKE L4B as a -DRIVER- stage for a multistage custom built output power amplifier. The guy had paid to have it built and it would run 25KW DC OUTPUT POWER - That's 25,000 watts, key down, unmodulated, OUTPUT power. The Drake, at 2KW DC output power driven 'balls to the wall', would drive it to 25KW DC output power.

the actual output power, on SSB was approx 50,000W PEP output power. (My comment on the net was that it made WBAL-AM radio which was a 50KW AM station jealous!)

The onsite engineer reported it this way. "We inspected the station. Observed a custom built power amplifier. Observed xxx amateur transceiver driving a Drake Co. L4B drinving this amplifier. Tested station in three

configurations. Straight through transciver, no amplification. Transceiver with Drake amplifer only, transceiver with Drake feeding custom amplifier..

Measured using calibrated Bird Company thruline wattmeter. Transceiver output measured at 100W. Transceiver with Drake amplifier measured at 2500W DC output power from Drake amplifier. (Overpower condition noted). Using largest slug on hand, inserted 10KW slug in Bird thruline and measured output power of amplifier. Keyed up amplifier. Pegged Bird wattmeter. Computations of input power determined requirement for larger slug up to 25KW. None on hand. Left PD on site to watch site while returned to office for 50KW slug used for broadcast station inspections. Returned and measured DC output power of amplifier. Measured keydown, no modulation DC output power at 25KW." His parting comment as an unofficil one to the net/.
'WE NEED TO GET BIGGER SLUGS!"

They fined the guy 10G, instituted revocation hearings (politics got it reduced to suspended and a fine! BOOOO!) and confiscated the equipment.

The gear was installed like a broadcast station. He lived in an area with enough real estate that he sufference NO Local QRN or RFI. The engineer said that he had had the place grounded like you would have expected in a high quality, high class operation.

Yes, the story is true. Yes I was part of it (and proud to be part of it!) No I'm not going to reveal the callsigns because as far as I know the guys have reformed and are back on the air behaving themselves.

Yes.. it did quiet down 75 for a while and Yes.. we all enjoyed ourselves immensely!

That's the story.

DC output? I thought you got RF out which is AC, not DC. Maybe you mean
DC input, you know, plate voltage X plate current. Just how did you
measure DC output?

Before the early 80's you measured the DC input voltage and you could not
exceed 1000 watts. These were the tube days, son. Later in the post the FCC
engineer corrected his statement.

Source record: 81951

Ahhh yes... The age old question of which to do... Multiple antennae, OR a matching box. You're going to have to go with the matching box unless you want your vehicle to look like a porcupine.

Shortwave is actually very hard to get a lot of "frequency coverage" out of. Your term of bandwidth isn't entirely correct. You want to "cover" those frequencies for transmit purposes I'd imagine. I'm going to assume you have an Amateur license.

Bandwidth is usually a term referring to the amount of frequency spectrum the carrier and audio occupy. More bandwidth means that more of the audio spectrum can be transmitted. For instance on AM on CB it's about 10Khz of bandwidth for a single channel. But let's delve into FM for a moment here since I am assuming you're an Amateur operator.

In FM (Frequency Modulation) the carrier will change/deviate frequencies across it's "bandwidth" to modulate the audio. For FM Broadcast radio stations this is on or about 100Khz. This is called "deviation" For voice you only need about 10Khz of bandwidth or so for it to sound clear. That's because voice occupy's very little of the audio spectrum. When broadcasting music however in order for the highs from the crash and ride symbols and other high pitch sounds you need a little more bandwidth in order to accomodate those audio frequencies.

Now before you go looking for the deviation adjustment in your rig, remember one thing. Both units must have their deviation open to accomodate. IE, if the transmitter on FM is broadcasting with 50Khz of bandwidth, and the receiver is only allowed to track 10Khz.... The receiver is going to get SOME audio, but when sounds are broadcast outside of the 10Khz allowed it will receive only static as the carrier has gone out of the "spectrum" that the receiver is looking for it in.

--- Disclaimer: I explained this in as best layman terms as I can due to the fact that there are CBers here that cannot use FM, but may still be interested in knowing how it works and gaining an rough understanding.

Interesting point about radio frequencies and "matching" antennae. As you go higher in frequency the radio waves start to behave more like light. And the more frequency coverage you get out of an antenna. For instance. At 27Mhz one might have an antenna that will have a good match up from about 26.5Mhz to 27.5Mhz (could be more, but let's assume here and not get carried away with which antenna is better.)

Whereas an antenna for 445Mhz may have a good match all the way from 440Mhz to 450Mhz.

Microwave is even more tolerant. (But at that point we're talking antenna that are actually just diodes. GUN Diodes as a matter of fact! That's why they call em Gunplexers. Thankyou Mr. John Gun for this wonderful technology.)

At 2.4Ghz (That's 2,400Mhz) the "antenna" (usually a dish) will cover from 2,300Mhz to probably 2,500Mhz. (2.3Ghz and 2.5Ghz respectively)

Why? Radio is emitted at the speed of light. So, lets make the math a little more basic by dealing with some round numbers. Let's just say that the speed of light is 300,000,000 meters / second.

300,000,000 / 27,000,000 = 11.11 Meters (Thus the 11 Meter band.)
300,000,000 / 28,00,000 = 10.74 (10 Meter band.)

1Mhz of difference = .3 meters (30cm) difference in length

300,000,000 / 440,000,000 = .6818 Meters (68.18cm)
300,000,000 / 441,000,000 = .6802 Meters (68.02cm)

1Mhz of difference = .16cm difference in length. (1.6mm)

30cm compared to 1.6mm is QUITE a difference!!!!!

So do you for advocating the use of modified Ham gear on 11m. And considering you worked for the FCC we have a good idea why 11m is so screwed up now.

1678. RCI 2950 SWR indicator?

Newsgroup: rec.radio.cb
Date: 2001-05-15 19:40:51 UTC
From: Michael Willey <photog101@mailhost.det.ameritech.net>
Message-ID: <3B018643.628DFB08@mailhost.det.ameritech.net>
Source record: 81956

I have an RCI 2950 and the SWR indicator light stays on all the time.
Does anyone have any idea as to why this has just recently started to
happen.
This is in a mobile application and the SWR has been checked with a BIRD
meter which shows 1.2:1 @ 27.185 mhz. I have tried several different
antenna systems and I still have the same problem with the SWR
indicator. I have also tried to use a 100 watt dummy load attached
directly to the back side of the radio and the same results.
Some one told me to reset the radio, but I am not sure that this source
was reliable.
Thanx in advance:
M:)

The 706 is very easy to open the TX. All you have to do is move a few chip diodes around on some solder pads. The same goes for the Yaesu FT-100 too. I have a IC-706MKIIG myself, not modified, and I know another Ham who has one that is. Until the Ham equipment manufactures make some design changes, or cover the PCB with epoxy, I doubt the situation will change much. So what that will likely mean is more of the illegal CBers will increase their use of modified Ham rigs on 11m. Since the VFO knob is so easy to spin they will start checking out some of the other bands en-mass before to long. I can see the day coming where you have to provide proof of license before buying any transmitter that operates on licensed frequencies.

This may seem dumb and not to sound as such...
Have you pushed the SWR button by mistake or the lock button?
Hope this helps...

Trams have allways been a great radio.
I have seen them go for up to $50.00 depending on condition.

So do you for advocating the use of modified Ham gear on 11m. And
considering you worked for the FCC we have a good idea why 11m is so screwed
up now.

73's,

Leland C. Scott

Yes it is because of people like him that 11 meter band is messed up, I do
not like the overpowered amps and splash boxes because they mess up our
local emergency communications. When the Life Flight helicopter almost hits
powelines at night because the ground personell can't communicate with the
chopper because some fool is splashing several bands, and is running 5 kw.
lives can be lost. there is NO reason a person needs to run that kind of
power. I will say that I wouldn't mind if the FCC raised the power levels
allowed to say 25-50 watts for cb provided these people didn't clip alot od
diodes so that they are overmodulated and splash so bad. When I can't talk
from my base here at the Red Cross office to one of our Disaster Team
members at a working house fire that is only 3 blocks away because of some
fool jamming the frequency, thats a shame. And don't tell me that these
people NEED to run power. I know it all starts because one guy has an amp,
then hios friend has to get one, pretty soon you have what we have in our
area. there are 3 guys that live within 10 miles from where I am and they
all use 1kw+ to talk 3-4 miles to eachother, there is NO NEED for that.

Well, we certainly don't need another no-HF ham coming here and
telling CBers that it's ok to freeband and in the same breath whine
about pirates on 10m.
